APPENDIX B

Data Sources and Cautions

Data Sources and Definitions

To facilitate the cross reference of data sources with the state profiles, the attached data sources information is referenced on a page-by-page basis for the seven data pages.

FIRST DATA PAGE—
STATE FINANCING OF HIGHER EDUCATION

Section: State and Local Government Support of Higher Education 1979 (Per Capita)

Student Aid

Source: Special Survey of states conducted by SHEEO in May 1980. Survey results are documented in "Report of the Ad-Hoc Task Force of the Quality and Comparability of HEGIS Finance Data, March 1981," by Jane Ryland, SHEEO/NCES Communication Network, Boulder, Colorado.

Includes funds that are appropriated to and expended for student aid through acts of state and local governments for outright scholarship grants, fellowship stipend, and work-study to individuals enrolled in formal coursework, either for credit or not. These funds should be provided directly to students, and not as part of the state's appropriations to institutions. Includes both merit (academic and athletic) and need-based awards to students at the undergraduate and graduate level attending in state.

General Institutional Support

Source: NCES-HEGIS survey, "Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979," (Part A, lines 3 and 4), as represented on data tapes furnished by NCES to NCHEMS.

Includes all amounts received from or made available to institutions through acts of State and local legislative bodies, except grants or contracts. These funds are for meeting current operating expenses and not for specific projects or programs.

Other

Source: Special Survey of states conducted by SHEEO in May 1980, documented in "Report of the Ad-Hoc Task Force of the Quality and Comparability of HEGIS Finance Data, March 1981," by Jane Ryland, SHEEO/NCES Communication Network, Boulder, Colorado.

Includes state and local government appropriations for higher education, excluding those for student aid noted above and institutional appropriations as represented in the HEGIS reporting universe. This category therefore reports other higher education operating expenses not reported through HEGIS. These include appropriations for operating expenses for postsecondary vocational-technical institutions not included in the HEGIS universe, operating expenses and postsecondary education coordinating boards, governing boards, boards of trustees, system offices, or similar organizations not reported from HEGIS, certain reciprocity payments to other states, operating expenses of centralized services (e.g., library, computing, extension, etc.), state and fringe benefits and retirement payments that do not flow through instructional accounts directly.

Total

Source: Derived measure. The sum of state and local support provided through student aid, general institutional support, and other.

Population

Source: *Statistical Abstract of the U.S., 1979.* Primary source: U.S. Bureau of the Census, Current Population Reports, Series P-25.

Per capita measures are used. Estimates of state population are conducted annually by the Census Department and the States under the Federal-State Cooperative Program. The count represents individuals who, at the time of the survey, considered the given place their usual place of residence. This is interpreted generally as the place a person lives and sleeps rather than the legal or voting residence. Members of the Armed Forces at military installations are counted in the area in which the installation is located. Crews of Navy vessels are reported as residents of the home port to which the vessel is assigned. College students are reported in the area in which they are living while attending college. Inmates of institutions are reported with the area in which the institution is located if they are located at the institution for a considerable length of time.

State and Local Tax Capacity, Effort and Revenues

Source: See sources and definitions below in section entitled "Tax Capacity and Effort 1977."

Percent Allocated to Higher Education

Source: Derived measure. Percent calculated by dividing the total state appropriation by tax revenues.

State and Local Appropriations to Higher Education Per Capita

Source: Same as total above.

These measures are shown for public and independent institutions separately where state record-keeping practice permit a separate distinction. Where not, the figures are shown under "not separately identified by sector."

It should be noted from the outset that the HEGIS universe of institutions has been modified in two ways for this study. One, all U.S. service schools such as West Point, U.S. Air Force Academy, etc., have been excluded from the analysis because they do not receive state funds and their inclusion dramatically distorts state sector averages. Second, all institutions in the U.S. territories (e.g., Puerto Rico) have been dropped from the study since these units are not "states."

Section: Enrollments 1979

Population

Same as above.

Total Enrollment

Source: NCES data tapes based on the HEGIS survey, "Opening Fall Enrollment in Higher Education, 1978."

FTE enrollment figures are based on the sum of full-time men plus full-time women plus an FTE of part-time students (as reported by institutions)—i.e., line 10, columns 1, 3, and 6 on the survey form.

Enrollment of State Residents

Source: Derived measure based on the use of NCES data for the HEGIS surveys, "Residence and Migration of College Students, Fall 1979" and "Opening Fall Enrollment in Higher Education, 1978."

First-time nonresident student proportions to total first-time enrollment at an institution as derived from the migration survey are applied to the FTE enrollment base to determine the public and independent FTE levels, per 1000 population. Numbers of students at institutions outside the state are based solely on first-time student counts from the specific source state. The totals represent the sum of those at public and private institutions in the state plus those state residents attending out-of-state institutions.

Section: State and Local Government Direct General Expenditures by Function 1979

Expenditures by Category

Source: U.S. Bureau of the Census, *Governmental Finances in 1978-79.*

For a full description of each of the categories of expenditures (higher education, elementary/secondary education, highways, etc.), refer to the source document.

Section: Tax Capacity and Effort 1977

Tax Capacity

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

Tax capacity is calculated using a representative tax system. Tax capacity of a State and its local governments is defined as the amount of revenue they could raise (relative to other State-local governments) if all 50 State-local systems applied identical tax rates (national averages) to their respective tax bases. Tax bases include sales and gross receipts, licenses, individual income, corporation net income, property, death and gift, and severance. For a full description of tax capacity, see the source document.

Tax Effort

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

Measures the extent to which tax capacity is actually taxed. State and local tax revenues divided by tax capacity.

Potential

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National

Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

The absolute dollar amount of capacity based on the total economic base of the State and localities as measured by representative tax system.

Collected

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

Compulsory contributions exacted by State and local governments for public purposes. Includes interest and penalties but excludes refunds. Non-tax revenues such as fees and charges, special assessments, rents, royalties, fines, interest earnings, and net profits from government-operated electric utilities, gas and water companies, liquor stores, and grain elevators are excluded.

Over (Under) Utilized

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

The difference between potential tax capacity and actual taxes collected.

Percent Distribution of Capacity

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

Shows the share of tax revenues by state and for the U.S. attributable to each tax source.

Amounts Per Capita

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

State capacity and revenue and U.S. capacity are expressed in per capita amounts.

Tax Categories

Source: D. Kent Halstead, *Tax Wealth in Fifty States, 1977 Supplement*, U.S. Department of Health, Education and Welfare, National Institute of Education, U.S. Government Printing Office, Washington, D.C., 1979.

General Sales—Sales and gross receipts for retail trade and service businesses, such as hotels, personal services, and amusement establishments.

Selective Sales—Taxes on sales and gross receipts for motor fuels, alcoholic beverages, tobacco products, insurance investor owned electric, gas, and telephone, public utilities, paramutual turnover from horse and dog racing, and amusement related receipts such as motion picture theaters.

Licenses—Taxes on motor vehicles, motor vehicle operators, for incorporation of businesses, retail licenses for the sale of distilled spirits, and hunting and fishing licenses.

Individual Income—Federal personal income tax liability.

Corporate Net Income—Corporate income allocated among states based on equal (1/3) weights given to retail receipts, payroll and corporate property.

Property Tax—

a) Residential—Estimated sales value of specified owner and renter occupied property.

b) Commercial and Industrial—Book value of depreciable assets, inventories, depletable assets, and land of corporations.

c) Farm Real Estate—Owner's estimate of fair market value of farm land and buildings.

d) Public Utilities—Gas utility plant value allocated among states according to miles of gas pipeline, telephone plant values allocated among states according to number of telephones and electric plant value allocated among states according to electrical generating capacity in kilowatts.

Death and Gift—Value of taxable estate.

Severance—Value of mineral production. This is not a measure of reserves but only of current extractions.

SECOND AND THIRD DATA PAGES—PUBLIC AND INDEPENDENT INSTITUTIONS: STATUS REPORT

Section: State and Local Finances

Abstracted from first data page—for public and independent institutions separately.

Section: Public Enrollments

High School Graduates

Source: *Statistics of State School Systems, Statistics of Public Elementary and Secondary Day Schools*, Fall 1979, NCES.

Headcount of persons graduating from public high schools in regular day school programs. Does not include persons granted high school equivalency certificates nor persons graduated from other than regular day school programs.

Entrance Rate to Public Institutions

Source: Derived measure.

Calculated by dividing first-time resident enrollment by high school graduates. This is a derived number and does not indicate the actual progression of high school students to state public institutions that a longitudinal study could show.

First-time Resident Enrollment

Source: NCES data tapes based on HEGIS surveys, "Residence and Migration of College Students, 1979," and "Opening Fall Enrollment in Higher Education, 1978."

The percentage of residents of headcount enrollments for each institutional classification was calculated using residence and migration data. Total first-time headcount enrollment was multiplied by these percentages to equal resident enrollment for each institutional category. Total resident public enrollment equals the sum of these institutional category enrollments.

In-Migration to Public Institutions

Source: NCES data tapes based on HEGIS surveys, "Residence and Migration of College Students, 1979," and "Opening Fall Enrollment in Higher Education, 1978."

The number of first-time students coming from out of State is calculated by subtracting first-time resident enrollment from total first-time enrollments.

First-time Enrollment

Source: NCES data tapes based on the HEGIS survey, "Opening Fall Enrollment in Higher Education, 1978."

First-time resident enrollments plus first-time students from out of State.

Retention Factor

Source: Derived measure.

Total public headcount enrollment divided by first-time headcount enrollment. The number is a ratio of total enrollment to first-time enrollment.

Conversion Factor

Source: Derived measure.

Full-time equivalent enrollment divided by total public headcount enrollment. This factor converts headcount to FTE enrollment.

FTE Enrollment

Source: NCES data tapes based on the HEGIS survey, "Opening Fall Enrollment in Higher Education, 1978."

Sum of full-time men plus full-time women plus a full-time equivalent of part-time students (as reported by institutions)—i.e., line 10, columns 1, 3, and 6 on the survey form.

Section: Institutional Revenues

State and Local Appropriations

Source: NCES data tapes based on "Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979."

Dollars appropriated or made available by State and local governments to public institutions of higher education for current operating expenses. Referencing the HEGIS survey form on finances, appropriations equal the sum of lines 3 and 4 of Part A. Grants or contracts are excluded. These funds are for meeting current operating expenses and not for specific projects or programs. Federal appropriations received through State channels should be included in the total for Federal appropriations. Tuition and fees collected by the institution and returned to the institution in the form of appropriations (that is, reappropriated tuition and fees) should have been subtracted as they are already reported under tuition and fees.

Tuition Revenues

Source: NCES data tapes based on "Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979."

Part A, line 1 of the HEGIS finance survey. All tuition and fees assessed against students for current operating purposes. Includes tuition and fee remissions or exemptions even though there is no intention of collecting from the student. Includes those tuitions and fees which are remitted to the State as an offset to the State appropriations. (Charges for room, board, and other services rendered by auxiliary enterprises are not reported here.)

Private Gifts, Grants, and Endowment Income

Source: NCES data tapes based on "Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979."

Part A, lines 11, 12, 13, and 14 of the HEGIS finance survey. Private gifts and grants include revenues from private donors for which no legal consideration is involved. Private contracts include those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Monies received as a result of gifts, grants, or contracts from a foreign government are included. Endowment income includes the unrestricted income of endowment and similar funds; the restricted income of endowment and similar funds to the extent expended for current operating purposes, and income from funds held in trust by others under irrevocable trusts. Capital gains or losses are not included.

Other E&G (Excluding Government Contracts)

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979.”

Part A, lines 2, 15, and 18 of the HEGIS finance survey. Includes revenues from Federal appropriations, sales and services of educational activities and “other.” Federal appropriations include all amounts received from or made available to the institutions through an act of Congress, except grants or contracts. These funds are for meeting the current operating expenses and not for specific projects or programs. Examples are Federal land-grant appropriations and Federal revenue sharing funds. BEOG's should not be included. Sales and services of educational activities include revenues derived from the sale of goods and services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. “Other” sources includes all items of revenue not covered elsewhere. Examples of interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution.

Total E&G (Excluding Government Contracts)

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979.”

Same as definition below except government grants and contracts are excluded.

Government Grants and Contracts

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part A, the sum of lines 5, 6, 7, 8, 9, and 10 of the HEGIS finance survey. Includes revenues from governmental agencies (Federal, State and local), which are for specific research projects or other types of programs. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Faculty counts are taken from the HEGIS survey “Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty, 1978-79.”

Headcount of instructional faculty on 9-10 month contracts. Does *not* include faculty on 11-12 month contracts. If significant numbers of faculty are so employed, these figures will be over stated due to the undercounting of faculty.

E&G Revenues

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979.”

Consist of current funds revenues from State and local appropriations, tuition income, government grants and contracts, private gifts, grants, and endowment income, and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, and independent operations. Also revenues for capital purposes are excluded. E&G funds include only those funds intended for operating purposes.

Percent Distribution: Institutional Revenues

Source: Derived measure.

This measure shows the share of revenues provided by each source. The next to last column is an intermediate total, with the final share contributed by government grants and contracts.

Section: Institutional Expenditures

Instruction

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year ending 1979.”

Part B, line 1. Instruction expenditures of the colleges, schools, departments, and other instructional divisions of the institution and expenditures for departmental research and public service which are not separately budgeted should be included in this classification. Includes expenditures for both credit and non-credit activities. Excludes expenditures for academic administration where the primary function is administration (e.g., academic deans). This category includes the following: general academic instruction, occupational and vocational instruction, special session instruction, community education, preparatory and adult basic education, and remedial and tutorial instruction.

Academic Support

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part B, line 4. Academic support includes expenditures for the support services that are an integral part of the institution's primary missions of instruction, research, or public services. Includes expenditures for libraries, museums, galleries, audio/visual services, academic computing support, ancillary support, academic administration and personnel development, and course and curricular development.

Research

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part B, line 2. Research includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. Does not include nonresearch sponsored projects (e.g., training programs).

Faculty counts are taken from the HEGIS survey “Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty, 1978-79.”

Headcount of instructional faculty on 9-10 month contracts. Does not include faculty on 11-12 month contracts. If significant numbers of faculty are so employed, these figures will be overstated due to the undercounting of faculty.

Public Service

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part B, line 3. Public service includes all funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community. Includes expenditures for community services and cooperative extension services.

Other E&G Expenditures

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part B, lines 6, 7, 8, 9, 10, and 11. Includes student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and E&G mandatory transfers. For complete definitions please reference the HEGIS finance form.

Total E&G Expenditures

Source: NCES data tapes based on “Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979.”

Part B, line 12. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations.

FOURTH DATA PAGE - TRENDS

Section: State and Local Appropriations

Dollars

Source: NCES data tapes from “Financial Statistics of Institutions of Higher Education” for fiscal years ending 1975 and 1979.

Shows graphically the percentage change in state and local appropriations to public institutions between 1975 and 1979.

Enrollments

Source: NCES data tapes on “Opening Fall Enrollments” for Fall 1974 and Fall 1978.

Shows the percentage change in public FTE enrollments between 1974 and 1978, the relevant academic period.

Constant Dollars per Student

Source: Derived measure.

Takes the foregoing data on appropriations and enrollments and adjusts for inflation using the Higher Education Price Index (HEPI). The HEPI measures average changes in the prices of goods and services purchased by colleges and universities through current fund E&G expenditures (excluding expenditures for sponsored research and auxiliary enterprises).

Section: Enrollment Mix

Enrollment Shares

Source: Data tapes from NCES based on the HEGIS survey of “Opening Fall Enrollments” for Fall 1974 and Fall 1978.

Using the institutional classification system described in Appendix A, the distribution of enrollments by institutional type in the public and private sectors are calculated and shown separately for 1979 and for 1975 in parentheses.

Section: State and Local Appropriations and Enrollments

These measures are the same shown previously, except in this section the absolute amounts for 1979 for appropriations (and Fall 1978 for enrollments) are shown, along with percent changes for the three preceding years.

Section: Tuition Revenues as a Percentage of Instruction Expenditures

These data are the same as those shown in the previous pages for tuition revenues and instruction expenditures. The base measures are shown in constant dollars per student. The dotted column shows instruction expenditures, whereas the cross-hatched column shows tuition revenues. The percentages at the bottom of each box show the proportion of instruction expenditures which tuition represents in FY75 and FY79.

FIFTH DATA PAGE—TRENDS

Section: Constant Dollar Revenues

The revenue categories in this section are the same as those used in the status report pages. The per student amounts have been adjusted by the HEPI to provide constant dollar amount. The percent changes between 1975 and 1979, as well as individual yearly changes for 1978-79, 1977-78, and 1976-77, are shown in total by sector and for each institutional category.

Section: Trends in the Mix of Support for Higher Education

These data are the same as those shown at the base of the status report pages. In addition to FY79 figures, revenue proportions for FY75 are also shown to depict changes in reliance on particular funding sources.

SIXTH DATA PAGE—FACULTY SALARIES

Average Faculty Salaries

Source: Data tapes for NCES based on the HEGIS survey, "Salaries, Tenure, and Fringe Benefits of Full-Time Instructional Faculty, 1978-79."

Part A, lines 1, 2, 5, and 6. Instructional faculty are defined as those members of the instruction/research staff who are employed on a full-time basis, on 9-10 month contracts, whose major regular assignment is instruction, including those with released time for research. Instructional faculty on sabbatical leave are to be included at their regular salaries even though they may be receiving a reduced annuity while on leave. Replacement for those on sabbatical should not be included. Total salary outlay for each rank is divided by the headcount of full-time persons at that rank.

SEVENTH AND LAST DATA PAGE— INSTITUTIONAL DESCRIPTORS AND DATA NOTES

Number of Institutions

Source: Data tapes based on NCES HEGIS "Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1979."

Count of institutions in each category based on the institutional classification system described in Appendix A.

Mean Size of Institutions

Source: Derived measure based on tapes from the HEGIS "Opening Fall Enrollment" survey.

Cumulative FTE enrollment for institutions in each category is divided by the number of institutions in that category.

Total FTE Enrollment

Source: Data tapes from NCES based on the HEGIS survey of "Opening Fall Enrollment in Higher Education, 1978," the relevant base for fiscal year 1978-79.

The cumulative enrollment of all institutions in that category.

Percent of Enrollment by Student Level

Source: Data tapes from NCES based on the HEGIS survey of "Opening Fall Enrollment in Higher Education, 1978," the relevant base for fiscal year 1978-79.

Based on FTE counts. Lower division includes the sum of first-time freshmen, other first year and second year undergraduate students. Upper division includes the sum of third year and fourth year and beyond undergraduate students. Unclassified undergraduate students are shown separately. Graduate includes unclassified postbaccalaureate plus first professional students, plus graduate students totals.

Data Notes

Source: Special SHEEO survey and documented in "Report of the Ad Hoc Task Force on the Quality and Comparability of HEGIS Finance Data, March 1981," by Jane H. Ryland, SHEEO/NCES Communication Network, Boulder, Colorado.

"Additional State and Local Government Funding for Higher Education" provides the absolute dollar amounts that are the basis for the "other" section on the first data page. The second section of these data notes, "Classification of Institutional Financial Reporting" provides additional classification on reporting practices in the states. A general "other comments" section follows to allow for specific state initiated clarification. The sources of these data notes are noted at the bottom of this section.

Important Data Cautions

The value of this study is highly dependent on the accuracy of the data. The data used (primarily the finance and enrollment data collected by the National Center for Education Statistics) are the best available on a comprehensive basis. However certain limitations exist and should be kept in mind for proper usage and interpretation, both in evaluating the data from one's own and other States. Other problems recognized by readers and not identified here should be brought to the authors' attention.

Inclusion of Institutions

The extent to which the HEGIS surveys include public and proprietary vocational-technical institutions that are postsecondary in nature varies among the States. For those States where they are omitted, both enrollments and State appropriations are likely to be underreported. Twenty-four states reported current operating expenditures for public postsecondary vocational-technical institutes not in the NCES-HEGIS universe. These expenditures ranged from a low of approximately $250,000 to nearly $157 million in another state. On average, these states spent $22.5 million on postsecondary vocational-technical education.

Treatment of Central Administration Costs

Revenues and expenditures for administration at campus system offices are included in the finances for the parent institution. In States where a similar function is provided by a State postsecondary commission, similar administrative costs are *not* included. As a result, revenues and expenditures for these latter systems are somewhat understated. Almost all states had such expenditures, ranging from approximately $40,000 to $28 million.

Chargebacks and Central Payment of Employee Benefits

For some large university systems, a single campus may provide services to other campuses. If some form of chargeback system is not used, then the finances for the campus providing the service will be overstated. Finances for the campuses receiving services will be understated. In other cases, employee benefits are paid to a separate agency handling such funds. These funds therefore do not flow through institutional accounts. Approximately 27 states had expenditures in these categories.

Counts of FTE Students

The HEGIS fall enrollment survey does not establish a standard definition for "full-time equivalent student." To the extent that institutions use different formulas, their FTE enrollment data lack comparability. And since FTE enrollment is used as a denominator for so many indexes in this study, lack of comparability is a serious problem. However, it is believed that most institutions use *similar* bases for determining FTE enrollment, thereby reducing the likely seriousness of these inconsistencies.

Further problems are caused by the fact that not all institutions count enrollments on the same calendar date. Also the enrollment count is for the fall term and not the entire year. In contrast, finance data covers the entire fiscal year. Institutions with low attrition and/or large numbers of summer students will therefore have per student amounts that are overstated relative to other institutions with opposite situations. Finally, the financial data reflect non-credit instructional and other expenditures, however matching non-credit enrollments are not reported.

Debt Service

In some States, the capital costs of physical facilities are financed through a separate State agency. In other States debt service is paid for with current funds. For these latter institutions, the finances will be overstated for comparison purposes. Nearly half of the states had debt service funds appearing as state appropriations and 19 states had such funds included in tuition and fees.

Tuition Remissions

In some States, tuition and fees are remitted to the State as an offset to State appropriations. Although the HEGIS finance survey directions clearly specify that these funds should be reported under tuition and fees and *not* under State appropriations, there is uncertainty as to whether the procedure has been strictly followed. Appropriations may be overstated by remitted tuition and fees not excluded in some States.

Tuition and fee remissions and exemptions for students should be reported under tuition and fees revenues. If not observed, these amounts will be understated.

Twenty-one states reported tuition and fees being reappropriated by the legislature. A spot check in selected states indicated that institutions were properly following instructions for reporting tuition.

Variances in Public Service

Institutions vary in the types of public service activities they engage in. In many States, a variety of State agencies that are not postsecondary in nature may be providing these activities, such as public hygiene, indigent patient care, hygiene research, etc. To the extent that state appropriations for these activities are reported, general institutional support will be overstated.

Geographical Price Adjustments

No attempt has been made in this study to adjust dollar values for differences among States in the prices paid for equivalent goods and services for higher education. Geographical price differences do exist and they are substantial, ranging from perhaps as high as 30 to 40 percent above the national average in Alaska to 15 to 20 percent below the average in certain non-metropolitan areas of the country. To establish common purchasing power for interstate comparisons, such price differences should be taken into account. However, measures of this type for any public service are not currently available.

Imputed Data

In those instances where institutions fail to report data, NCES imputes these numbers. The attached listing indicates by state, those institutions where one or more values were imputed in the finance data base.

INSTITUTIONS WITH IMPUTED DATA

- ALABAMA
  - PRIVATE
    - GENERAL BACCALAUREATE
      - 001033 OAKWOOD COLLEGE
    - OCCUPATIONAL
      - 009435 SOUTHERN BUSINESS COLLEGE
- ALASKA
  - PRIVATE
    - GENERAL BACCALAUREATE
      - 001061 ALASKA PACIFIC UNIVERSITY
      - 029016 INUPIAT U OF THE ARCTIC
    - OTHER PROF & SPECIAL
      - 029117 ALASKA BIBLE COLLEGE

List of Tables vii

Foreword xi

Preface xiii

Important Cautions to the Reader xv

Chapter 1
Introduction 1

Chapter 2
General Trends Among the States 11
- Summary Findings 11
- State Rankings 19

Chapter 3
State by State Reports 69
- U.S. Average 70
- State Reports Including the District of Columbia 78

Appendix A
Listing of Institutions by Classification, Control, and State 487

Appendix B
Data Sources and Cautions 531

STATE RANKING TABLES

State and Local Support of Higher Education Per Capita

1a - Total State and Local Support-All Institutions 19

1b - Total State and Local Support-All Public Institutions 19

1c - Total State and Local Support-All Independent Institutions 19

2a - State and Local Student Aid - All Institutions 20

2b - State and Local Student Aid - All Public Institutions 20

2c - State and Local Student Aid - All Independent Institutions 20

3a - State and Local Institutional Appropriations - All Institutions .. 21

3b - State and Local Institutional Appropriations-All Public Institutions 21

3c - State and Local Institutional Appropriations - All Independent Institutions 21

State Finances and Allocation to Higher Education

4 - Tax Capacity 22

5 - Tax Effort 22

6 - Tax Revenues 22

7 - Allocation to Higher Education ... 23

8 - Percent Allocated to Public Higher Education 23

9 - Percent Allocated to Independent Higher Education 23

State and Local Government Expenditures

10a-Total Expenditures 24

10b-Percent Allocated to Higher Education 24

10c-Percent Allocated to Elementary and Secondary Education 24

Population and Enrollment

11 - Population 25

12a-Total FTE Enrollment 25

12b-Percent Public 25

12c-Percent Independent 25

Enrollment of State Residents

13a-Total Enrollment Per 1000 Population 26

13b-Public In-State Enrollment Per 1000 Population 26

13c-Independent In-State Enrollment Per 1000 Population 26

13d-Out-of-State Enrollment Per 1000 Population 26

Public Institutions Enrollment

14 - State Public High School Graduates Per 1000 Population 27

15 - Entrance Rate to Public Institutions 27

16 - First Time Resident Enrollment Per 1000 Population 27

17 - In Migration to Public Institutions Per 1000 Population 27

18 - First Time Enrollment Per 1000 Population 28

19 - Retention Factor (First Time to Total Enrollment) 28

20 - Conversion Factor (Headcount to FTE) 28

21 - FTE Enrollment Public Institutions Per 1000 Population 28

Independent Institutions Enrollment

22 - State Residents Enrolled at Independent Institutions Per 1000 Population 29

23 - Non-Residents Enrolled at Independent Institutions Per 1000 Population 29

24 - FTE Enrollment in Independent Institutions Per 1000 Population 29

Graduate Enrollment, Percent of Total Enrollment

25a-All Public 30

25b-Public Research Universities, Medical 30

25c-Public Research Universities, Non-Medical 30

25d-Public Universities, Medical 31

25e-Public Universities, Non-Medical 31

25f-All Independent 31

State and Local Appropriations Per FTE Student, Public Institutions

26a-All Public 32
26b-Research Universities, Medical 32
26c-Research Universities, Non-Medical 32
26d-Universities, Medical 33
26e-Universities, Non-Medical 33
26f-Comprehensive 33
26g-General Baccalaureate 33
26h-Two-Year Academic and Comprehensive 34
26i-Two-Year Occupational 34
26j-Health Professional 34
26k-Other Professional & Specialized 34

Tuition and Fees Revenues Per FTE Student, Public Institutions

27a-All Public 35
27b-Research Universities, Medical 35
27c-Research Universities, Non-Medical 35
27d-Universities, Medical 36
27e-Universities, Non-Medical 36
27f-Comprehensive 36
27g-General Baccalaureate 36
27h-Two-Year Academic and Comprehensive 37
27i-Two-Year Occupational 37
27j-Health Professional 37
27k-Other Professional & Specialized 37

Total E&G Revenues (Excluding Government Grants and Contracts) Per FTE Student, Public Institutions

28a-All Public 38
28b-Research Universities, Medical 38
28c-Research Universities, Non-Medical 38
28d-Universities, Medical 39
28e-Universities, Non-Medical 39
28f-Comprehensive 39
28g-General Baccalaureate 39
28h-Two-Year Academic and Comprehensive 40
28i-Two-Year Occupational 40

FOREWORD

Lyman Glenny
Professor Emeritus
University of California--Berkeley

I believe we in higher education are undergoing a significant evolutionary step in the dissemination and use of institutional financial data. For as long as most of us can remember, the finances of America's corporations and public agencies fell within the exclusive purview of accountants, budget officers, finance committees, and the like. For stockholders and interested citizens, the yearly annual report with balance sheet and profit and loss statement dutifully audited was the sole available data--a scant introduction to the vast and essentially obscure world of finance. It was hinted, and there is an element of truth in it, that if one could understand published financial statements, one was smart enough to run the corporation.

In the public sector, very few individuals, from the governor on down, could explain and justify the state budget. The public, in blind faith, believed that some responsible person understood and approved of the budget.

The day of this dependency is rapidly approaching an end. It may have begun with creation of the Congressional Budget Office (CBO) in 1974--the first attempt by Congress to shed real light on national budgetary matters. "Asked to provide Congress with budget related information and with analyses of alternative fiscal and programmatic policies," CBO's principal tasks are "to present the Congress with options for consideration and to study the possible budgetary ramification of those options." Other public and private agencies have been similarly created to explain and clarify the financial and budgetary process.

This progress has been made in many areas of life, but our immediate interest is higher education. How are colleges and universities financed, and what constitutes a reasonable budget? Many of us in the budget/funding field know something about institutional financing from our academic study, but for the layperson--faculty, students, parents, legislators--such knowledge is sorely limited. And when it comes to judging what constitutes reasonable budgetary balances, even most professionals are awed by the tremendous variance in financial patterns, almost all proclaimed to be "acceptable" by institutional proponents in the light of current economic circumstances.

The impetus for improvement still seems to come primarily from the research community, although the yearly budget reports of some state coordinating boards are becoming increasingly informative. Some early studies asked discerning questions and sought to provide answers with hard data. In 1973, William W. Jellema documented the distortion of institutional budgets by deficit operations in *From Red to Black*. He provided detailed analyses of sources of funds and their distribution and similar analyses of institutional expenditures and their distribution. Five years earlier, William G. Bowen in his classic volume *The Economics of the Major Private Universities* (1968) had backed up his case with hard data from a typical university (a composite of Chicago, Princeton, and Vanderbilt). The 1974 Carnegie Commission Staff report *Tuition* explained its case in a lengthy series of statistical tables that provided a national, a state-by-state, and in many cases an institutional picture of tuition revenues as they relate to other data.

Many other early reports and countless recent studies contribute to our knowledge of state conditions and their impact on how institutions are financed. This brings us to the present report, *Higher Education Financing in the Fifty States, FY81* (Third Edition), by Marilyn McCoy and Kent Halstead. This study integrates data on a complex set of state and institutional practices, which helps one to understand and evaluate higher education in each state. In so doing, the authors add substantially to our appreciation of the particular funding picture in any given state, while concurrently enlightening the reader on a number of general points. First, we see the profuse richness and diversity among the states. A multitude of data is provided, in terms of inherent economic conditions, size of the population, traditions of public or private higher education, and access to higher education.

Second, not only do we see substantial differences in the inherent capacities of the states but concomitant differences in the policy choices made by the states. These are evident in the relative willingness of the states to levy taxes, in how states distribute such funds, in the type of higher education institutions supported, and in the relative reliance on other sources of support. The measures in this study allow the reader to see and understand these differences.

Third, from the perspective of institutions, we see great differences in the types and level of funding support and how these funds are used. These profiles are depicted for the most recent year (FY1981) and the four preceding years to provide a sense of relative improvement or loss in key areas--overall funding, faculty salaries, and enrollments.

The authors suggest numerous analyses that may be made from the data. Let me emphasize two that are unique to this study. First, justification for greater funding requires more than an exhortation for a greater share of the state budget (although a case for this may be able to be strongly made by using the normative data in this study). It requires thorough knowledge of current and potential tax policies, since the real cause of deficient funding may lie in lower than average tax rates, which adversely affect support for all public services--including higher education. This study provides detailed data on where such deficiencies in taxation lie, and on the potential for possible increases in tax revenues if national average rates were adopted.

A second analysis unique to this study is intrastate comparison of the funding of different segments of the public sector. Many observers may find surprising the discrepancies in per-student state appropriations to different types of public institutions within the state system. A state's two-year colleges, for example, may be substantially underfunded compared to national averages for such schools, while at the same time another sector may be comparatively well funded. How is this justified? Certainly the various types of institutions within the systems will seek answers after reading this study.

The analysts will have great fun with this report, making comparisons and rooting out apparent inconsistencies in revenues and expenditures. They should enjoy themselves. But it must be remembered that for faculty, students, citizens, and legislators, education financing is a serious business involving issues of adequacy, equity, and quality. These analyses should lead to greater examination of existing policies and practices and to much needed improvements.

I commend the study to your attention and encourage you to reassess the practices and policies established for higher education in your state.

PREFACE

This report was jointly sponsored by the National Center for Higher Education Management Systems (NCHEMS) and the National Institute of Education (NIE). We acknowledge with thanks their financial support and professional encouragement. The data were provided primarily by the National Center for Education Statistics (NCES), and the improved quality and timeliness of the NCES data tapes were an essential building block for the study. In addition, staff at many state higher education coordinating/governing boards were extremely helpful in reporting information on the type and extent of unusual funding and operating arrangements in their states.

Credit and thanks for the programming of the analyses for this report are due primarily to Kaye Kriz, who carried out this task with great talent, considerable work, and good humor. Warm gratitude also goes to Barbara Epp for her extensive assistance in the programming of this study. The contributions of Jeanne Hurley and Howard Bashinski are also greatly appreciated.

Special thanks are due Melodie Christal at NCHEMS, who provided the internal supervision for the project in all phases. Her efforts in coordinating tasks, editing data, preparing and checking tabulations from the state surveys, and proofing copy are much appreciated. Her care and diligence in these arenas added measurably to the study.

Clara Roberts has again provided essential leadership in the printing and production of the book. The authors also wish to acknowledge the excellent editing provided at NCHEMS by Mary Hey and at NIE by Gary Grass.

To Paula Dressler, we extend a very special thank you for her exceptional skill and many hours of effort in once again typing and compiling this study. Her capacity to carefully transform drafts to copy is unmatched. Her cheer and good will were always appreciated. Her help in coordinating all stages of document development were key in finalizing this work.

We also want to especially thank Paul Brinkman, Dennis Jones, and William Tetlow for their help in supporting this study and insuring its completion.

This is the third edition of *Higher Education Financing in the Fifty States* (earlier editions were for FY79 and FY76). This work has evolved from earlier work by both authors. Kent Halstead, in *Statewide Planning in Higher Education* (1974), identified the selected indexes related to higher education financing and the socioeconomic status of states that are used in this study. His work on measures of tax capacity, tax effort, and tax revenues is now updated regularly by the Advisory Council on Intergovernmental Relations. Also, the adjustments for inflation found in this book are based on his annual Higher Education Price Index (HEPI). Marilyn McCoy, in her work with the Statewide Analysis Task Force at NCHEMS (which included Halstead) and a subsequent panel of experts, developed the basic data system and framework used in this report. The members of those groups provided invaluable suggestions and comments in the evolution of the predecessor of this study, *State and Local Financial Support of Higher Education 1973-74*, and an even earlier version for 1972-73.

It is intended that this study be updated regularly. Recommendations for improvement in format or analysis are therefore encouraged.

SPECIAL NOTE

In the development of this report, NCHEMS has constructed a specialized data base drawing upon tapes and other published material from the National Center for Education Statistics and the U. S. Census Bureau, among others. In this report, summary data for ten categories of public and independent institutions are displayed for each of the fifty states and the District of Columbia. Similar reports *by institution* can be developed from this data base. In addition, other reports, including custom-designed reports, can be generated by NCHEMS Information Services on a cost-recovery basis. The five major categories of information available include revenues and expenditures, enrollment, faculty, programs, and research and development. For further information about NCHEMS Information Services, contact Craig Short at NCHEMS, P. O. Drawer P, Boulder, Colorado 80302, or telephone 303-497-0319.

IMPORTANT CAUTIONS TO THE READER

The following precautions and explanations are provided to give readers a perspective for their reading and to prevent any misuse of the data presented in this edition.

- The data presented here are for fiscal year (FY) 1981, with trend data back to FY 1977. This information is approximately three years old. It is mainly useful as background for understanding the mix of factors that are important in a specific state (the relative reliance on public education, the tax structure, the mix of institutions in the state). The data should either be updated or the continuation of relative relationships verified if the data are to be used in current decisionmaking regarding appropriation levels, formula funding, or the establishment of financial profiles.

- In developing this study, and through review of earlier work in the field, a number of data comparability problems were identified. These problems mandate that extreme care be taken in making interstate comparisons of certain measurements. These comparability problems are discussed in general in section 2 of appendix B and should be studied prior to reading any individual state's profile. In an effort to identify any data comparability problems or other necessary clarifications, the higher education finance officers in each state are consulted, and their comments are included in the "Data Notes" section with each state's profile.

  Similarly, caution is advised for those who would compare the data in this study to the data in previous editions. In particular, while totals for the public and private sectors are compatible across editions, the data by institutional type may not be because individual institutions may be classified differently from one edition to the next.

  Variations in the way states report data in postsecondary education underlie our concern regarding comparability. For example, in some states, the vocational education system is included within higher education; in others, it is a component of elementary/secondary education. Similarly, medical schools are organized and reported as separate campuses in some states; in others, they are integrated with a university. To address this particular difference, research universities and other universities are separately categorized as medical and nonmedical to indicate the existence of programs in medicine, veterinary medicine, osteopathic medicine, and dentistry within these sectors. Different state practices for capital expenditures, retirement-system payments, student aid, and for counting enrollment also contribute to comparability problems. Finally, the significance of the counts of faculty vary by sector. For instance, the reliance on full-time faculty (reported here) is relatively low in the two-year sector.

- Proper interpretation and assessment of financing higher education requires study of each state's *entire* data presentation. Isolation of a single measure or attention to a limited segment is likely to be misleading. For example, it is currently popular to focus on state appropriations per capita, a measure that ignores the different needs for funding represented by enrollment levels, the varying taxing ability of states, different strategies for utilizing tuition versus utilizing tuition versus appropriations, and numerous other factors that determine and usually justify variations in per capita support.

- There is no "ideal" funding pattern recommended or implied in this study, nor should good or bad connotations be attached to state rankings. States differ so greatly that many funding strategies can be considered sound.

  Financing higher education is a difficult and complex process. Readers are urged to become thoroughly familiar with their state's entire financial picture before attempting evaluation of any specific operating level. The study (like the second edition) is more comprehensive than previous work of this type, as it introduces such factors as student migrations and different enrollment patterns, state and local government tax capacity and effort, the structure of the public higher education system, and institutional revenue and expenditure details. Yet there are voids that can be filled only with locally supplied data. Thus, information should be introduced into the analysis by knowledgeable state and local officials regarding geographical price differences, costly versus less costly academic programs, competition for state monies and traditional funding priorities, history of taxation, specialized accounting practices, and the role of the private sector.

  The breadth of information required for sound funding decisions suggests that many different points of view about higher education should be taken into consideration. It is therefore recommended that in the analysis and interpretation of this study, the reader should take into account the perspectives of postsecondary institutions, state commissions, the legislative and executive branches, the general public, and student clientele.

Recognizing that important budget decisions and resource allocations may be influenced by subsequent editions of this study, and that valid comparative procedures are critically needed, the authors request your constructive commentary on the study design and statistical detail. Please send your comments to the authors in care of NCHEMS, P. O. Drawer P, Boulder, Colorado 80302.

CHAPTER 1: INTRODUCTION

State and local governments are by far the largest single financial supporters of higher education in the United States. Efforts to evaluate state appropriations and to identify potential changes in the states are therefore critical to successful financing in the public sector, and are also of great interest to the private sector. This report, focusing on comparisons among the states, is intended to aid in this process. Two general guidelines have been followed:

- The broadest possible approach has been taken, in order to point up the substantial differences among states in the conditions that affect financing. Thus the study includes information about the different economic conditions in the states, the extent to which other public services compete with higher education, the relative importance of private higher education, and other such conditions that affect higher education financing in the state. An understanding of these basic differences is essential to the informed development of policies for financing.
- Much detail has been provided on the specifics of institutional financing, to establish data comparability as well as important benchmarks and guides so that meaningful comparisons can be made.

Thus the study presents both a macro view of financing at the state-budget level and micro detail about institutional revenues and expenditures. Each state profile provides diverse data for the reader, ranging from the state tax base to a breakdown of expenditures by particular institutional function. Much of the data is interrelated to show the consequences of increases or decreases in one or more of the elements. Thus it is possible to determine, for example, that low state appropriations per student may result from a low tax base, a low tax effort, competing public services, a low allocation rate, a high student load, heavy reliance on tuition, an education system that emphasizes more expensive forms of higher education, or any combination of these factors. To fully understand state support levels, information on all of these factors is necessary.

NEED AND RESPONSE

Two recent developments made it easier and increased the incentive to produce this study. First, the collection of financial data by the National Center for Education Statistics (NCES) has vastly improved since NCES first produced the *Higher Education General Information Survey* (HEGIS) in 1966. The HEGIS data base is consistent, detailed, comprehensive, and essentially responsive to national statistical requirements. NCES is continuing to work on the data-collection system and on definitions, in order to overcome long-standing problems in data comparability.

Second, since the data have improved, the higher education community would like to see the statistics effectively communicated. Legislators and college officials are well aware of the potential use for published data that can clearly document financial needs and provide sound justification for funding requests. Their need for such data is multiplied now that austerity in government spending and increased competition for funding among public services demand rigorous budget presentations.

This study has also been prompted by the need for an analysis of financing that goes beyond a few simple aggregate measures. Such measures, although commonly used, are entirely inadequate and often misleading. As one example of how state rankings for a single measure can be misinterpreted, consider appropriations per capita. Of the states that rank lowest in the United States for this measure, only one has a substantially underfinanced education system (compared to the norm). The others have nearly average total operating funding per student, either because state support is supplemented by high tuitions or income from other sources, or because there are fewer students to educate.

This study gathers and organizes a comprehensive set of state-level financial and supporting statistics on higher education. However, regardless of how detailed and thorough any study of financing is, all conditions affecting higher education cannot be accounted for, and many cannot even be measured. Therefore, the data must be interpreted with the understanding that unique circumstances within the states can lead to a wide range of acceptable practices. For example, the level of appropriations is not so much a consequence of legislative action as it is of evolving conditions determined by many factors: educational-opportunity objectives, student financial-aid programs, the role of private institutions, government wealth, preparation of high school graduates to attend college, and geographical access. No financial study can possibly replicate this complexity or substitute for local knowledge, interpretation, and judgment.

Comparisons between states are inevitable. This study assumes that such comparisons, when made with some understanding of underlying factors, are of value in establishing perspective, identifying alternative financial policies and practices, and helping to set realistic support goals.

STUDY DESIGN AND ORGANIZATION

In conducting the study, the first step was to develop an approach to higher education financing that included as many as possible of the relevant components of the basic conditions in a state and in its higher education system. This resulted in the inclusion of data on enrollment, state and local government fiscal analyses, institutional structuring within the public and private sectors, conditions related to and affecting financing, and institutional revenues and expenditures.

The data for each state have been organized by topic, with each topic presented on a separate page. While these divisions serve to focus attention, the topics are interrelated and should be studied jointly.

A variety of measures have been used, each type serving a different purpose: (1) absolute amounts, which permit verification of the base data; (2) relative terms (based on user or load units), which establish comparability; (3) percent distribution, which identifies relative contribution; (4) constant dollars, which illustrate trends in purchasing power; and (5) indexes with respect to the U.S. average (printed in bold print) and state ranking, which establish relative positions.

The principal means of analysis is interstate comparisons. Every effort has been made to allow for fair and meaningful comparisons. However, limitations in the data collected, the variability of accepted practice, and the distinctive nature of each institution make state comparisons more general guides to relative behavior than exact measurements. In every instance, these statistics should be supplemented when possible with local information and judgment.

The study is designed for use in the following types of analyses:

- Review of higher education's share of the state and local budget, higher education being one of many competing public services
- Evaluation of the role of state tax capacity, tax effort, and allocation rates in establishing appropriations to support higher education
- Study of tax capacity and tax effort for each type of tax as a means of assessing tax policy
- Review of the distribution of state appropriations to institutions and to students
- Study of FTE enrollment in comparison with national averages
- Identification of a state's student-enrollment pattern by type of institution within the public and independent sectors
- Evaluation of state and local appropriations and other revenues on a per-student or other-user basis by type of institution
- Evaluation of various institutional expenditures on a per-student or other-user basis by type of institution
- Review of trends in state and local government appropriations by type of institution relative to requirements imposed by enrollment growth and inflation
- Study of trends in tuition revenues as a percentage of instructional expenditures by type of institution
- Study of the effects of inflation on state and local appropriations, tuition and fees, and total educational and general revenues, and the associated gain or loss in purchasing power
- Study of trends in the mix of support for higher education by revenue source
- Study of the level and trends in faculty salaries by rank and by type of institution

The focus of this report is the states. Chapter 2 provides a summary of national trends and state patterns. State rankings are provided on state and local government finances, population and enrollment, institutional financing for public and private institutions, trend data, and faculty salaries. Chapter 3, which is the focal point of this study, presents individual state reports for all 50 states and the District of Columbia, as well as the U.S. average.

Appendix A includes a listing of all institutions by state, grouped by institutional category, and explains the classification system used in this report. Appendix B presents documentation on the sources of data used in this report, and cautions on data use.

EXPLANATION OF THE STATE-REPORT ANALYSIS

Each state report presented in chapter 3 consists of eight pages and is divided into eight topics: Commentary; State Financing of Higher Education; Public Institutions: Status Report; Independent Institutions: Status Report; Trends; Inflation-Adjusted Trends; Faculty Salaries; and Institutional Descriptors and Data Notes.

Commentary

A commentary introduces each state report. Each commentary follows a basic format, but special attention is given to unique state conditions and accomplishments. Each state commentary describes recent trends, state financing of higher education, state tax base and budget, higher education enrollments, and institutional finance and characteristics. Some questions to which the commentary responds are:

- Have state and local government appropriations kept pace with enrollments and inflation, in order to preserve the purchasing power of institutions?

- What are the significant trends in appropriations and tuition for each type of institution?
- Is the state's provision of student aid and support to individual institutions appropriate, given the proportion of residents attending public and private institutions?
- How wealthy or poor is the state in terms of its ability to support public programs through taxation, and to what extent has this tax potential been tapped?
- How important is higher education in the state budget when compared to other public services?
- Is the state's allocation of tax revenues to higher education consistent with enrollment levels and tuition policy?
- Are public enrollment levels consistent with state goals for higher education? Are college entrance rates, in-migration, student retention, and the proportion of full- and part-time students at desired levels?
- What is the structure of public and private higher education in the state? Which types of institutions enroll the most students, and how do enrollment patterns affect financial requirements?
- To what extent do residents attend colleges elsewhere?
- How do expenditures per student compare with national averages for each type of institution? In particular, how do the institutions with the largest enrollments fare in this measure of financial strength?
- How do appropriations and tuition contribute to the adequacy or inadequacy of institutional revenues?
- To what extent do sources other than state government and students contribute to institutional support? Do any types of institutions appear excessively dependent on a single source of income?
- How has the mix of revenues by source changed over time, and what are the implications for future financing if the trend continues?
- How does the emphasis on graduate education or the size of institutions affect the financial requirements of institutions?
- What is the overall position of faculty salaries in the state? Where are the strengths and weaknesses? Is the situation improving or worsening?

State Financing of Higher Education

The first data page of each state report includes background information on the state to provide a context for assessing state and local government support of higher education. Included on this page is a profile of the state's population and enrollment, its tax structure, the amount allocated to higher education, and finally, the distribution of state and local appropriations within the higher education system and among the various other functions of government.

State and Local Government Support of Higher Education. Although government funding decisions are developed in a context of historical precedents and current political and citizen pressures, they nevertheless ultimately depend on the state's wealth and how it is secured and used in terms of tax rates and allocation percentages. The figures in the arrow on this page give a picture of this reality. Beginning at the left, tax capacity (the amount of revenue the state and local government would raise if a national uniform set of tax rates were applied) is multiplied by tax effort (the extent to which a state taxes its available resources) to equal state and local government tax revenues collected. These tax revenues are then multiplied by the percentage of taxes allocated to higher education (for general institutional support, student aid, and "other" support) to equal the dollar amount appropriated to higher education by state and local governments. Tax capacity is fixed by the state's economy and is relatively stable; both tax effort and the allocation rate can be changed by legislative action. The index numbers (the U.S. average=100) indicate how the state compares to the national average.

The table above the arrow presents dollars per capita and percent distribution by function--student aid, general institutional support, and "other"--and by sector. The "other" category includes higher education appropriations that are neither for student aid nor for direct institutional support--payments for central state services for libraries and computing, central administrative expenses, state boards and commissions, fringe benefits and retirement payments to postsecondary personnel, support for postsecondary vocational education not encompassed in the HEGIS reporting universe, and payments to other states for education services. Dollar values in this table are likely to be less informative than the mix of support and the percent distribution. If the index values are used, a state's higher education budget profile can be compared with national averages, and any exceptional deviation can be reviewed for consistency with state policy.

State and Local Governments Direct General Expenditures by Function. The pie chart and the associated table indicate the percentage distribution of the state and local government budget [1] for seven categories of public services (higher education, elementary/secondary education, highways, public welfare, health and hospitals, public services, and "other"). The table also provides the same information for 1977, as well as the total dollars per capita. Index numbers (U.S. average=100) are in bold print.

The financial support given any public service depends on many factors: public demand, unit costs, government capacity to finance, and competing claims. Certain universal needs, such as elementary and secondary education and health care, typically are given a high priority by states and communities, and their per-capita funding varies less than other public services such as welfare and higher education.

State support of colleges and universities depends a great deal on a state's philosophy about what constitutes adequate provision of "educational opportunity," who should pay (based on the interpretation of who benefits), and what the standards for geographical and program access should be. State history, citizen expectations and attitudes, urbanization, climate, and educational opportunities in nearby states are some factors that influence decisions in these areas. A few states have decided not to be in the higher education "business" as much as others. They intentionally plan to be "debtor" states and encourage residents through extensive student aid programs to attend out-of-state schools.

Tax Capacity and Effort. The chart at the lower right of the page presents data on tax capacity and tax effort for ten tax categories. Collected revenues and overutilized or underutilized potential are reported for each tax category, together with related rankings and national averages. The relative importance of the various tax bases as potential revenue sources is indicated by the percent distribution of capacity.

- *State and local tax capacity* measures the potential of state and local governments to obtain revenues for public purposes through various kinds of taxes. Earnings of local residents are only one source of tax revenues; therefore, this tax capacity measurement is *not* equivalent to per-capita personal income. Tax capacity is measured here by the "representative tax system," [2] which defines the tax capacity of a state and its local governments as the amount of revenue they would raise if a national, uniform set of tax rates were applied. The sum of the capacities for all states equals the total tax revenues collected in the United States. The tax bases represent, for each of the various kinds of state and local taxes, the degree to which taxable activity exists within the jurisdiction. The tax rates applied are based on the average amount of taxes collected nationwide expressed as percentages of the total U.S. tax-base activities. For example, if 5 percent of total general sales is collected in taxes nationally, then 5 percent is the rate applied to the level of general sales in each state. Thus, the tax (or capacity) in a state is the level of economic activity being taxed, multiplied by a common tax rate.

  Ten tax categories are included in this report. They are: general sales, selective sales and gross receipts, licenses, individual income, corporate net income, three categories of property tax (residential, commercial and industrial, and farm), death and gift taxes, and severance.

- *Tax effort* measures, in percentage terms, the extent to which states tax their available resources. The total tax capacity nationwide is equal to the tax revenues collected by all states. Since the nationwide effort by definition is 100 percent, the index of tax effort for individual states indicates how each state compares with the national average.

Education financiers and elected officials charged with providing government services and establishing taxation policies have a responsibility to understand tax capacity and tax effort. When the adequacy of higher education or any government support service is challenged, questions will arise, such as, How does our state compare with its neighbors in its ability to raise money through taxes? Do we realize as much revenue from our tax sources as states with similar capacity and economic structure? These initial inquiries generally lead to consideration of changes in specific tax rates or to decisions to encourage growth in certain tax bases. The chart of tax capacity and effort presents data for answering these questions.

---

[1] The state and local government total budget per capita (pie diagram) is substantially larger than the amount of taxes collected per capita (lower-right table) because the budget includes nontax revenues and exceptional types of tax revenues not reported as part of the "representative tax system," and because the budget has a different reporting date (1981 versus 1980). The state budget for higher education per capita is larger than total appropriations for higher education (upper-left table) because the budget includes (and appropriations exclude) funding of auxiliary enterprises, capital investment, federal revenue-sharing funds, independent operations, and revenue for centrally funded offices, faculty fringe benefits, and student aid when they are not part of an institutional account.

[2] The "representative tax system" approach to capacity measurement was initially developed by the Advisory Commission on Intergovernmental Relations (Mushkin and Rivlin) and simplified for yearly computation by Robert Reischauer and later by Kent Halstead. See Halstead, *Tax Wealth in Fifty States*, U.S. Government Printing Office, Washington, D.C., 1978, 255 pp., stock no. #017-080-01871-3. The most recent update of this work is *Tax Capacity of the Fifty States, Supplement: 1980 Edition*, Advisory Commission on Intergovernmental Relations, Washington, D.C., June 1982.

Enrollments. The brief enrollment summary in the lower lefthand corner of the page lists the population of the state and its ranking relative to other states, the FTE enrollment in higher education and its state rank, and the enrollment distribution between the public and private sectors. The section called "Enrollment of State Residents (per 1,000 population)" provides an FTE measure of resident-student access to higher education at the state's public or independent institutions and at out-of-state institutions. The total enrollment of state residents (FTE) indicates the extent of access for residents to higher education both in and out of state. Each measure (except population and enrollment) is indexed to the U.S. average.

Public Institutions: Status Report; Independent Institutions: Status Report

The format of the "Status Reports" for the public and independent sectors (which are found on the second and third data pages of each state report) are basically the same. Only the methods used to derive enrollments (presented in the arrows) and the categories of revenues differ. (For the independent sector, private gifts and endowment income are shown separately; for the public sector these revenue categories are combined.) Each report contains five parts: the principal entries for "Institutional Revenues" and "Institutional Expenditures" and the supporting entries for "State and Local Finances Per Capita", "Enrollments", and a profile of institutional support and enrollments by institutional category.

In the broadest terms, proceeding from top to bottom, the status reports show how state and local government appropriations, allocated by type of institution, interact with related enrollments per capita and result in appropriations per student, which, together with other institutional revenues, support institutional expenditures.

State and Local Finances. The end result of the upper part of the arrow on these pages shows appropriations per capita to the public and independent sectors. This amount is derived using the following computation: state and local tax revenues are multiplied by the percentage of taxes allocated to higher education, to equal the dollar amount appropriated to higher education. (The computation to this point is the same as described in the arrow on the first data page.) This allocation in the "State and Local Government Support of Higher Education" table is then multiplied by the proportion of the revenues allocated to public/independent institutions, to equal the state and local appropriations per capita to the institutions. Each variable is indexed to the U.S. average.

To analyze the adequacy of this financial support, the reader must assess the data on institutional revenues and expenditures located in the tables at the bottom of these data pages. For example, deficiencies noted in per-student appropriations may be traced back to a below-average allocation of state and local government tax revenues.

Public/Independent Enrollments. Enrollments are a primary measure of the work load carried by colleges and universities. For the bottom part of the arrow, different calculations are used for the public and independent sectors to determine the FTE enrollment. For both sectors, all enrollment measures are reported in terms of the state's population (per 1,000 residents). In the public sector, the following variables are used to calculate the FTE enrollment:

- *High school graduates* is the number of high school[3] graduates in the state from the previous spring (approximately 94 percent of the average fall freshman class are recent high school graduates). Graduates from public and private high schools are included.
- *Entrance rate* is a ratio of the first-time resident enrollment in public institutions as a percentage of high school graduates. This rate reflects how well public institutions compare to private and out-of-state schools in attractiveness of educational programs, tuition level, and location. It also suggests how well high school graduates are prepared for college, and the disposition of students, parents, and the community toward attendance at state institutions. The entrance rate is usually the most important factor in determining a state's final FTE enrollment level, and the conditions contributing to high or low rates should be studied.
- *First-time resident enrollment* is a headcount of resident students enrolled for the first time at public institutions of higher education.
- *In-migration* is a headcount of nonresidents enrolling for the first time in public institutions in the state per 1,000 population. Factors influencing in-migration include low nonresident tuition, academic reputation, program offerings, state topography and climate, and competitive effort to encourage nonresident attendance.
- *First-time enrollment* is the sum of resident and nonresident students enrolling for the first time.

---

[3] Alexander W. Astin, Margo R. King, Gerald T. Richardson, *The American Freshman: National Norms for Fall 1982* (Los Angeles, Calif.: American Council on Education and the University of California, 1982).

- *Retention factor* is the ratio of first-time headcount enrollment to total headcount enrollment in public institutions and reflects the proportion of students who continue their education beyond first-time enrollment. State systems that emphasize upper-division, graduate, and professional education generally have high retention factors; those that focus on two-year terminal programs typically show lower retention rates. Selective admissions and successful continuing-education programs also affect retention.

- *Conversion factor* in public institutions is the ratio of total headcount to FTE enrollment, that is, the degree of full-time as opposed to part-time enrollment. High ratios suggest conditions and programs that encourage or require full-time enrollments, while low ratios may be due to numerous graduate and continuing-education programs where part-time attendance is common.

- *FTE enrollment* per 1,000 population is the aggregate load measure used in this analysis at the state level.

The calculation of FTE enrollment (per 1,000 population) in the public sector is as follows: the number of high school graduates is multiplied by their entrance rate to public institutions to make the number of first-time resident enrollments. Adding this number to the number of first-time out-of-state students yields the figure for total first-time enrollments. Total first-time enrollments are then multiplied by the retention factor (to obtain total enrollment) and the conversion factor to convert headcount to FTE enrollment, which results in total FTE enrollment in public institutions.

Public enrollments reflect a number of conditions: the degree to which the state's high schools prepare pupils for college entrance, the opportunities within the state for postsecondary enrollment, the attractiveness of the state's institutions to nonresidents, and year-to-year retention rates. Improving these conditions is a typical educational goal of states. Therefore, state planners generally consider the size of public enrollments and how they were calculated when analyzing financial support requirements. Many state budgets, in fact, are based in part on enrollment-driven formulas.

The calculation of FTE enrollments (per 1,000 population) in the independent sector uses only two variables--resident enrollments and out-of-state enrollments. This is because independent institutions typically draw a more universal clientele than public institutions, often enrolling more out-of-state and foreign students than state residents. They receive little state support and generally feel less responsibility for educating residents than do public institutions. The formula used to determine FTE enrollment in independent institutions is: resident enrollments plus out-of-state enrollments equals total FTE enrollment.

Institutional Categories and Enrollment Profile. To the right of each arrow on data pages 2 and 3, institutional support per capita and FTE enrollments per 1,000 population are shown (with their index values) by institutional category. The percentage share of total enrollments for any one of the 10 institutional categories can be computed by dividing a category's FTE enrollment by the total FTE enrollment for the sector.

The institutional categories reported are, in the judgment of the authors, the minimum number required to establish reasonable comparability at the state level and are used throughout the document. They are: *research universities* that grant doctorates and have separately budgeted research expenditures exceeding $15 million yearly; *universities* that grant substantial numbers of doctorates but receive less than $15 million annually for sponsored research (both types of universities are then subclassified as either with or without medical, indicating the presence of medical, dental, osteopathic, or veterinary medicine programs); *comprehensive* institutions that grant graduate degrees, primarily at the master's level; *general baccalaureate* institutions that award most degrees at the bachelor's level; *two-year academic and comprehensive* colleges that emphasize associate and certificate degrees; *two-year occupational* colleges that grant associate and certificate degrees primarily in occupational fields; *health professional* colleges that grant degrees in a variety of medical areas including first-professional degrees; *other professional and specialized* institutions, including professional health programs that do not confer first-professional medical degrees, engineering schools, teachers colleges, law schools, rabbinical schools, and seminaries. The categories are defined in detail in appendix A.

The characteristics that distinguish the various types of institutions have an important influence on financing. Each institutional category has a relatively distinct mission, instructional program, and student level. Each institutional category thus differs in faculty requirements, faculty salary rates and work loads, class size, necessary supporting equipment, student personnel services, administrative overhead, plant size, and other operating conditions that affect costs. In states where large proportions of students attend universities, with their inherently costly complex of programs and degree levels, support requirements are high. In states where enrollment emphasis is on two-year colleges, which are far less expensive to operate, support requirements for the total public system will be substantially less. Because differences in enrollment patterns among different institutional categories greatly affect total funding requirements, it is important that states understand how their structures differ from those of other states and how these structures affect funding. This knowledge will encourage development of an overall plan for financing based on an independent determination of support needs for each type of institution within the system.

Institutional Revenues and Expenditures. The tables at the bottom of data pages 2 and 3 are divided into two parts--institutional revenues and institutional expenditures. Since institutional revenues and expenditures per user unit (principally students) represent the financial bottom line, this analysis is presented by institutional type.

The indexes for revenues and expenditures are computed using U.S. averages for each of the institutional categories. Thus, the revenues and expenditures for a given type of institution in one state can be compared with values for the same type of institution in other states and with the national average. Since enrollment is the basic load for instructional and related supporting activities, most revenues and expenditures are reported on a per-student basis. Government contracts and grants (mostly sponsored research) are reported per faculty member; public service expenditures are reported per 1,000 population. The lower part of the tables presents a percent distribution of revenues and expenditures, including indexes relative to the U.S. average.

Institutional Revenues. The revenues presented are for current operations relating to the institution's educational mission and immediate supporting activities. These educational and general (E&G) revenues exclude income from sales and service of auxiliary enterprises, hospitals, independent operations, and revenues for physical plant construction.

The following are brief definitions of each revenue category; more detailed information can be found in appendix B.

- *State and local government appropriations* include the amounts provided to institutions by state and local government legislative bodies for current operations, excluding grants and contracts.

- *Tuition Revenues* reports the revenues obtained from tuition and fee charges assessed students for current operating purposes, including those amounts remitted to the state to offset its appropriation. When a large proportion of out-of-state students is enrolled, nonresident tuition payments increase the average tuition per student to an amount substantially above the resident rate.

- *Private gifts, grants, and endowment income* include revenues from donors for which no legal consideration is involved, and income received from endowment and similar funds (and expended for current operating purposes).

- *Other E&G (excluding government contracts)* includes: federal government appropriations (mostly to land-grant institutions); revenue from sales and services of educational activities, such as film rentals, scientific and literary publications, testing services, university presses, and dairy products; and revenues from sources not covered elsewhere.

- *Total E&G (excluding government contracts)* is an intermediate revenues total that provides a measure of general operating funds excluding government grants and contracts (that is, research and training funds). This is a key measure to compare in assessing the adequacy of operating funds for each institutional category. Consideration should be given, however, to the relative extent of graduate education provided and average institutional size, since these conditions affect funding needs and are not accounted for here.

- *Government grants and contracts* are revenues (both direct and indirect) from government agencies for specific research projects and training programs.

- *Total E&G revenues* are the total of all E&G revenues, including sponsored research. This total cannot be related to a single user unit and is therefore reported only in absolute dollar amounts.

For any given institutional category, the dollar amounts for each type of revenue should be checked against national averages and levels in other states. A large contribution from a single source may compensate for low funding from other sources and help to achieve a nearly average level of total revenues. Such an imbalance would be seen in the percent distribution figures, which would show a skewed deviation from national averages. The percent distribution chart at the bottom of the page can be used to gauge the importance of each individual revenue source. The type of institution strongly affects the role of each source and the pattern of support.

In the public sector, state and local government appropriations and student tuition are two income sources that, in particular, should be carefully scrutinized in terms of both adequacy of dollar amount and relative share of total revenues. In some states, appropriations and tuition levels are quite inconsistent with national averages and should be reviewed with state objectives for support and equity in mind.

Institutional Expenditures. These expenditures reflect E&G current funds expenditures and mandatory transfers for the operations of the institutions. Again, as with revenues, expenditures for auxiliary enterprises, hospitals, and independent operations are excluded. The E&G expenditure components, briefly stated (they are more fully defined in appendix B), are as follows:

- *Instruction* expenditures of the colleges, departments, and other teaching units for all types of instruction as well as expenditures not separately budgeted for departmental research and public service are included in this category.

- *Academic Support* expenditures are for libraries, academic administration and personnel development, computing service, and other services that are an integral part of the institution's primary mission of instruction, research, and public service.

- *Research* includes funds expended for activities specifically organized to produce research outcomes, commissioned by an external agency or separately budgeted by the institution. Research expenditures are reported per faculty member.

- *Public Service* includes funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services to groups external to the institution. Public-service expenditures are reported per 1,000 individuals in the state's population.

- *Other E&G Expenditures* are for student services (admissions, career guidance and counseling, health), institutional support (general administrative services, planning, legal, and fiscal operations), plant operation and maintenance, student scholarships and fellowships, and mandatory transfers for auxiliary enterprises.

- *Total E&G Expenditures* is an aggregate dollar amount that indicates the relative importance of total funding for each institutional category as part of the overall sector budget.

The national average dollar amounts per student for the various types of institutional expenditures can be viewed as typical "costs" of education. Deviations from the national norm result from a whole set of institutional conditions that differ from the hypothetical "average" circumstances. Although differences in the variables affecting expenditures within institutional categories have been partially restrained by features common to the group, many individual institutional differences remain. Also, certain external factors (for example, an unexpected depletion or windfall in financial support or a substantial difference between projected and actual enrollments) occasionally occur that cause expenditures to deviate significantly from category norms.

Significant differences in the mix of expenditures from national averages should be studied for consistency with goals and objectives. Often, expenditure patterns are based on historical precedent and unadjusted trends, resulting in a profile that is inconsistent with the institution's current situation and mission. The percent-distribution table and the degree of variance from national averages can assist in an initial examination of this possibility.

Trends

The primary focus of the fourth and fifth data pages is trend data on enrollments, state and local appropriations, tuition and fees, and total E&G revenues (excluding grants and contracts). Changes in yearly growth for enrollments and state and local appropriations in current dollars are presented, as well as inflation-adjusted changes for state and local appropriations, tuition and fees, and total E&G revenues. The trend analysis has three additional components: enrollment mix, tuition revenues and instruction expenditures, and the mix of support provided from the various sources.

State and Local Appropriations and Enrollments. The table at the top of this first trend page provides FY81 state and local appropriation data and Fall 1980 FTE enrollment data by institutional category. The four-year percentage change from 1977 to 1981 is presented for state and local appropriations and enrollments. Yearly percent changes for 1980 to 1981, 1979 to 1980, and 1978 to 1979 are also shown. Index numbers (the U.S. average=100) are provided for the four-year change.

Constant-Dollar Revenues. The consequences of inflation on appropriations, tuition and fees, and total E&G revenues (excluding grants and contracts) are shown in the table on the second trend page. This table shows the four-year and yearly percentage changes in constant dollars per student for each of the three variables. The index numbers for the four-year change provide data for assessing the state's change relative to the U.S. average.

Since all absolute-dollar amounts have increased in recent years to meet the requirements of expanding enrollments and to offset inflation, the effects of these two factors must be excluded if a trend on the real adequacy of financing is to be established. Thus, dollar amounts are reported on a per-student basis, and constant dollars of equivalent purchasing power are obtained by dividing actual dollars by the Higher Education Price Index (HEPI). The HEPI measures average changes in the prices of goods and services purchased by colleges and universities through current-fund E&G expenditures (excluding expenditures for sponsored research and auxiliary enterprises). According to HEPI, the prices colleges and universities paid for goods and services show a 39.9 percent rate of inflation between 1977 and 1981.

State and Local Appropriations. The diagram at the top of the first trend page depicts the data from the tables on the two trend pages. The solid line represents the percentage change in state and local appropriations (in current dollars) to public institutions between 1977 and 1981. The dashed line plots the percentage change in public FTE enrollments between 1976 and 1981, the relevant academic period. The dotted line represents the measure of constant dollars per student, derived by dividing state and local appropriations adjusted for inflation (using HEPI) by FTE enrollments for 1977 through 1981. (1977 is the base year.)

Public Enrollment Mix and Independent Enrollment Mix. The distribution of FTE enrollments in 1981 by institutional type for the public and independent sectors is shown in the pie chart on the first trend page at the bottom of the left-hand side. The distribution of enrollments in 1977 is shown in parentheses.

A Comparison of Tuition Revenues and Instruction Expenditures. In the lower portion of the first trend page are two bar graphs comparing tuition revenues and instruction expenditures for FY77 and FY81 in constant dollars per student. The top graph portrays the public sector, and the bottom graph shows the independent sector. These graphs show data for tuition revenues and instruction expenditures from the second and third data pages and are presented for seven categories of institutions. (The research universities and universities combine data for medical and nonmedical institutions, and data for the health-professional schools are not displayed.) The solid white column shows the dollars per student for instructional expenditures and the crosshatched column shows the tuition-revenue dollars per student. The percentages at the bottom of each box show the proportion of instruction expenditures that tuition represents in FY77 and FY81.

Although no single indicator can explain and justify decisions regarding tuition levels, reference to instructional costs appears to be a most direct consideration.

Tuition primarily pays for instruction and related overhead costs of administration, library, and plant operation and maintenance. In the public sector, tuition revenues seldom equal these costs, with the share varying from state to state by institutional type. In the independent sector, tuition revenues almost always cover the majority of these costs. Decisions in setting the level of tuition are based on costs, family ability to pay, student demand as affected by price competition from other institutions, and state philosophy regarding the citizen's "right" to postsecondary educational opportunities. Public two-year colleges, viewed as a democratic open door to continued education, traditionally have charged the least tuition. Private universities with strict entrance requirements, a nationally drawn student body, and high dependence on student tuition as a source of income traditionally have charged the most.

Trends in the Mix of Support for Higher Education. The bar graphs at the bottom of the second trend page show individually for the public and independent sectors the mix of support for the following sources: state and local appropriations, tuition revenues, government grants and contracts, private gifts, grants, and endowment income, and "other" E&G revenues. (The bar graphs portray the percentage distribution of revenues from the second and third data pages for FY81.) The solid white column represents FY77 and the crosshatched column is for FY81.

There is a great deal of inertia in the funding pattern in both sectors. Gradual shifts over time should be thoroughly investigated, particularly in times of financial stress when every source of funding requires maximum encouragement and any decline in relative contribution could threaten institutional solvency if allowed to continue.

Faculty Salaries

The major purpose of the sixth data page is to present average salaries for 9- to 10-month full-time faculty by academic rank and institutional category in the academic year 1980-81, and to report the four-year and two-year percentage changes in salaries (1977 to 1981 and 1979 to 1981, respectively). The bold print index values (U.S. average=100) report relative positions compared to the U.S. average for the average salaries and four-year change. In addition, the count of 9- to 10-month full-time faculty by academic rank and institutional category are provided.

To remain alert to new requirements and allow time for adequate financial planning, colleges and universities must consistently monitor national trends in salary data. Faculty services are the single largest purchase of colleges and universities, accounting for nearly half of their current operating expenditures. They should check three specific areas: the institution's relative position within its peer or competing group, consistency in remuneration by rank within the institution, and maintenance of faculty purchasing power.

Institutional Descriptors and Data Notes

The seventh data page has two purposes: (1) to present descriptive data about the institutions in the state and (2) to provide information about special circumstances in the state that affect the interpretation of the HEGIS data, as well as to provide any other necessary clarifications.

Institutional Descriptors. The data presented here include the number of state institutions in each category, their mean size, their total FTE enrollment, and the percent distribution of enrollment by student level. The bold print index numbers (U.S. average=100) indicate the relationship to the national average.

Enrollment profiles of state institutions in each category should be checked against national averages to determine group compatibility. A large variance from the national average of a particular category suggests an inconsistency with the common characteristics of that category and should be noted in any analyses; it implies that the data are substantially less comparable. The mix of enrollment by student level, in particular, has a significant impact on institutional expenditures. Education programs are usually more expensive to operate at upper levels because of progressively smaller classes, more extensive employment of higher-ranking faculty, and in some instances, the need for more costly equipment. State institutions that have enrollment patterns skewed toward upper-division and graduate levels relative to national averages are therefore likely to need proportionately greater revenues and expenditures.

Data Notes. The data notes consist of three elements: (1) a summary of funds that do not flow through institutional accounts for student aid, postsecondary vocational-technical education, state boards and commissions, fringe benefits, interstate contracts and reciprocity payments, centrally provided service functions (library service, computers, phones), and centrally administered capital/debt service; (2) a clarification of institutional financial reporting for debt service and current funds, and the policy on tuition and fees reappropriations; and (3) comments on special circumstances affecting data comparability or any other necessary clarifications for interpretation of the data. These notes are provided to assist the reader in making interpretative adjustments between and among states, given differences in state practices.

CHAPTER 2: GENERAL TRENDS AMONG THE STATES

Summary Findings

State and local government funding of public higher education increased 9.9 percent between 1980 and 1981. However, this gain in appropriations was more than consumed by inflation of 10.7 percent during the year.[1] Further exacerbating this decrease in state spending power, there was a 4.2 percent increase in public-sector enrollments. The combined effect of inflation and enrollment growth was a 4.8 percent drop in the value of state and local appropriations in constant dollars per student in FY81.

By contrast, tuition revenues also failed to keep pace with inflation and enrollments, slipping .8 percent in constant dollars per student. Overall, the real-dollar per student operating budgets of public institutions (excluding government grants and contracts) shrank 3.9 percent in FY81. As these figures suggest, 1981 was a year of general retrenchment in the financial capacities of public higher education.

All but two states increased appropriations in FY 1981. On average, appropriations grew by 9.9 percent among the states. The leader, Wyoming, increased appropriations by 35.9 percent, followed by Louisiana at 25.0 percent, North Dakota at 19.8 percent, and Oklahoma at 19.0 percent. (The two states that reduced overall appropriations were Michigan and Minnesota.) Public FTE enrollments in academic year 1981 increased overall by 4.2 percent. These gains in appropriations were out weighted by both inflation and enrollment gain, causing constant-dollar appropriations per student to fall by 4.8 percent. Only 12 states experienced any improvements in the purchasing power of total E&G revenues per student. Thus the preliminary picture for the states during this picture is one of retrenchment in value of state support. The twelve states that showed improvements in constant dollar per student state funding were Wyoming (17.2 percent), Louisiana (8.5 percent), Oklahoma (8.1 percent), D.C. (6.7 percent), Arizona (3.9 percent, Washington (3.5 percent), North Dakota (3.3 percent), Mississippi (3.0 percent), Alabama (2.6 percent), Maine (1.9 percent), Hawaii (.8 percent), and North Carolina (.1 percent). By and large these states are in the south or western parts of the country.

Appropriations Per Capita

Alaska led the nation in its support of higher education in 1981 by providing $277 per capita, a level nearly three times the U.S. average of $100 per capita. Wyoming was next in its level of support at $167, followed by California at $152, Hawaii at $142, and North Dakota at $137. New Hampshire spent only $39 per capita on higher education, the least amount of tax dollars of any state; it was followed by Vermont at $58, Massachusetts at $59, and Pennsylvania and Maine at $64. Other measures of need--enrollment load, expensiveness of the higher education system, contributions from other sources--must be considered in order to accurately determine the adequacy of state funding. Thus, the state rankings contained in tables 1 through 3 should be used only as indications of the amounts that states appropriated to higher education, and of how the money was divided between student aid and institutional appropriations.

a. State and Local Student Aid

In 1981, 40 states supported higher education through student aid, averaging $3.80 per capita. Alaska led the nation, providing $23.60 per capita in student aid. New York was in second place with $14.10, Vermont in third place with $9.40, Illinois in fourth place with $7.90, and Minnesota in fifth place with $7.80 per capita each. Only eleven states provided no student aid support: Arizona, Hawaii, Montana, Nebraska, Nevada, New Mexico, North Carolina, Oklahoma, Oregon, Utah, and Wyoming. Thirty-three states provided support to students attending public institutions and 32 states provided aid to students attending independent institutions. Although a similar number of states provided student aid to students attending both public and independent institutions, students at public institutions received a smaller share, 39 percent, of total state student aid funds. State student aid totaled nearly $863 million in 1981, an 8 percent increase over 1979 levels. Nonetheless, student aid represented only 4 percent of the total higher education support provided by states. Traditionally, student aid has been the province of the federal government. The extent to which the federal government will relinquish this role, as currently encouraged by the Reagan administration, and whether states will assume responsibility to any significant degree is still unclear. The figures in this study, however, indicate that to date states have had a relatively minor role in student aid.

b. Appropriations to Institutions

Over 90 percent of state funds allocated to higher education were appropriated directly to institutions. On average, the states spent $92 per capita in 1981 for institutional support, with almost all of these funds going directly to public institutions. On average, states provided only $1.20 per capita to independent institutions, though only 23 states--led by New York at $6.30 per capita and Pennsylvania at $3.70 per capita--provided such funding. Surprisingly, Massachusetts, the state with the largest number of state residents enrolled in independent institutions (see ranking table 22), provided the least amount of institutional support to the independent sector. New York, with the second largest number of residents at independent institutions, also led the nation in institutional support to the independent sector (see ranking tables 2c and 3c).

---

[1] *Higher Education Prices and Price Indexes: 1982 Update* (Washington, D.C.: Research Associates of Washington, October 1982)

State Tax Base and Budgets

There are major disparities among the states in their sources of taxable wealth. The typical rate of taxation in 1980 yielded $949 per capita, but the state with the greatest capacity to tax, Alaska (with a capacity of $2,463 per capita), had over three and a half times the resources of the poorest state, Mississippi (with a capacity of only $658 per capita). When a representative-tax-system measure was applied, the 10 wealthiest states in tax capacity were Alaska with $2,463, Wyoming with $1,862, Nevada with $1,465, Texas with $1,173, California with $1,110, Oklahoma with $1,108, Colorado with $1,069, Montana with $1,067, Connecticut with $1,059, and Delaware with $1,057; the 10 poorest states were Mississippi with $658, South Carolina with $714, Alabama with $718, Tennessee with $749, Arkansas with $750, North Carolina with $754, Maine with $759, Georgia with $778, Kentucky with $787, and Rhode Island with $795. In recent years, the states have become acutely aware of the value of energy-related resources in determining their economic circumstances. Since this measure of tax capacity did not include mineral reserves, only extractions, the wealth of such states as Texas, Alaska, Louisiana, North Dakota, Wyoming, and Colorado was probably understated.

Table 4 shows the relative positions of the states in tax capacity, table 5 shows their utilization of this capacity (tax effort), and table 6 shows the resulting revenues they raise. As these rankings make clear, the states vary in both their inherent wealth and their willingness to tax. Alaska, with the largest capacity (based on such things as combined economic strength in sales, property, income, and severance-related taxes), had an extremely high tax effort (66 percent above average) and collected tax revenues that were more than four times the U.S. average. Wyoming's case is different. It is the second wealthiest in taxable capacity but its tax rates are among the lowest (26 percent below the average)--yet because of its wealth, it still ranked third in overall tax revenues collected. Mississippi, with the lowest tax capacity, taxed at a rate close to the national average; yet it still ranks near the bottom in revenues because of its inherent lack of wealth. States highly taxed during this period included New York (67 percent above average), Alaska (66 percent above average), Massachusetts (34 percent above), the District of Columbia (31 percent above), Hawaii (24 percent above), and Rhode Island (23 percent above). Table 5 provides these tax rates.

States also varied substantially in how they utilized state revenues. The typical state budget in 1981 allowed 27 percent for elementary/secondary education, 13 percent for welfare, 11 percent for public services, and 9 percent each for higher education, health and hospitals, and highways, and the remaining 23 percent was spent for a variety of other state functions. Individual states have markedly different priorities. Table 10a shows the total level of state expenditures in 1981, based on a census report on governmental finances. These amounts include expenditures from state tax revenues, other state funds, and federal revenue-sharing monies. Alaska spent more than any state on public functions, $7,211 per capita, while Arkansas spent the least, $1,303 per capita. Arizona spent the largest share of its state budget on higher education, allocating 15 percent of its funds to this use. New Mexico, North Dakota, Utah, and North Carolina also placed a major emphasis on higher education, providing 14 percent. The District of Columbia spent the lowest share on higher education, only 3 percent of its budget. Massachusetts also ranked low in this category, spending only 4 percent of its budget on higher education (see ranking table 10b). There were also important differences among the states in the budget shares allocated to elementary/secondary education. Indiana, Arkansas, Montana, Utah, South Carolina, Pennsylvania, and New Jersey all allocated 30 percent or more of their funds to elementary/secondary education. At the other end of the spectrum, the District of Columbia, Hawaii, Alaska, Nevada, California, and Delaware assigned relatively small shares (from 15 to 23 percent).

Population and Enrollments

In the United States in 1981, the hypothetical average-size state would have had nearly 4.5 million people, approximately 172,000 of them enrolled as full-time students. In reality, neither population nor enrollments were that evenly distributed. For instance, six states had over 10 million people: California had 23.8 million, New York had 17.6 million, Texas had 14.3 million, Pennsylvania had 11.9 million, Illinois had 11.4 million, and Ohio had 10.8 million. (See ranking table 11.) Thirteen states had fewer than 1 million people each, with Alaska and Wyoming having fewer than 500,000 individuals per state.

California had the largest number of students in higher education, over 1 million FTE enrollments. New York was second largest, with 760,000 students. Texas, Illinois, Pennsylvania, Ohio, Michigan, Florida, and Massachusetts also had very large student populations, between 300,000 and 525,000 each. By contrast, 13 states had enrollments below 50,000, a very small number given the average size of institutions. (See ranking table 12a.)

a. Selection of Public or Private Institutions

On average, 76 percent of students attended public institutions. In Wyoming there are no independent institutions. In nine states--Wyoming, Nevada, Utah, Alaska, New Mexico, Arizona, Hawaii, North Dakota, and Montana--90 percent or more of the students were in public institutions. This high concentration of students in public institutions created a concomitant need for additional public support for higher education. In comparison, those states with greater reliance on independent institutions for the education of their populace needed less public support. (Tables 12b and 12c provide rankings of the states in public and independent enrollments.) The District of Columbia was almost entirely private in enrollment, with 88 percent of students in such institutions. Massachusetts followed closely behind, with almost 60 percent of the students (not all state residents) enrolled in independent institutions.

b. Relative Access Levels among the States

An important enrollment indicator, provided in table 13a, shows the relative access achieved by residents of the 50 states. Massachusetts and California led the nation in access for residents, with the result that people in those two states were 21 percent more likely to attend institutions of higher education than was the average U. S. resident. Access for Massachusetts residents is particularly noteworthy given that state's low level of financial support to higher education and its reliance on independent education. Residents of the state clearly valued higher education, but they chose either to pay for it directly in the form of tuition or to attend institutions that were often inadequately supported, in comparative terms.

In Massachusetts, New York, the District of Columbia, Pennsylvania, Connecticut, Iowa, and Rhode Island in particular, large numbers of state residents attended independent institutions within the state (see table 13c). In Connecticut, the District of Columbia, Alaska, New Jersey, Vermont, New Hampshire, and Delaware, large numbers of state residents (at least twice the usual number) chose to go out of state to attend institutions of higher education (see table 13d).

c. Public Enrollments

Arizona had the largest number of students in its public system of higher education in relative per-capita terms--44 per 1,000; it was followed by North Dakota with 43 per 1,000, California with 40 per 1,000, Delaware with 39 per 1,000, and Colorado and Wisconsin with 38 per 1,000. (Refer to table 21.) The reasons for these enrollment rates are charted in ranking tables 14 through 20, which trace high school size, college choices of first-time students (both in and out of state), the extent to which students persisted in their education, and students' relative proclivities for full- or part-time study.

d. Independent Enrollments

On average, the independent sector in a state enrolled 9. 4 FTE students per 1,000 individuals in the state. A number of states far exceeded this average, indicating a substantial emphasis on independent education. The District of Columbia led the nation, with 86. 1 FTE students per 1,000 individuals; Massachusetts was second, with 32. 7 students per 1,000 individuals (see table 24). In Massachusetts in particular, the extensive enrollment in the independent sector was a result of the large number of state residents in these institutions (17. 0 FTE per 1,000 out of a total of 32. 7 FTE per 1,000--over 50 percent of the total). States that drew large numbers of out-of-state students to attend their private schools included the District of Columbia, Rhode Island, Massachusetts, Vermont, and New Hampshire (see table 23).

e. Graduate Enrollments

States vary greatly in the size and structure of their higher education systems. One component that affects the need for funding is the amount of graduate education required in the state. On average, 8 percent of public enrollments in the United States are at the graduate level. Leading the nation, Georgia, Iowa, Indiana, Kansas, and Kentucky had 12 percent of their students studying at the graduate level; next were Connecticut, Minnesota, Nebraska, New Mexico, Ohio, Pennsylvania, and West Virginia, which had 11 percent of their enrollments at this level. By contrast, the District of Columbia's and New Hampshire's public systems were almost entirely undergraduate, with only 4 percent of the students at the graduate level. Similarly, Alaska, Florida, Maine, Massachusetts, Montana, and Nevada were relatively low in graduate emphasis, with only 5 percent of public students at this level. Given the relative expensiveness of graduate-level study, these ratios translate into greater or lesser needs for state and other forms of financial support. Ranking tables 25a-f chart these differences among the states, in total and by selected types of institutions.

Public Institutional Finances

At public colleges and universities, state and local appropriations are the most important source of funds, representing 59 percent of the E&G revenues received by those institutions. Tuition and fees are next in importance, accounting for 16 percent of funds, followed by government grants and contracts with 15 percent. Because of the centrality of funding from these sources, rankings of the states are provided by source and class of institution, in tables 26a-k, 27a-k, 28a-k, and 29a-e. Tables 43a-e show rankings of the states by percentage share contributed by major revenue sources.

a. State and Local Appropriations per Student

In 1981, the average state provided $3,099 per student for public higher education institutional support. The amount of appropriations per student is a critical measure of state effort because it measures the state's contribution relative to the number of students being educated within its public system. As is evident in tables 26a-k, the states vary considerably in their support of public students, both in total and by category of institution. Alaska led the nation, providing $10,274 per student, and was followed by the District of Columbia, $7,260; Wyoming, $5,392; South Carolina, $3,885; and Hawaii, $3,807. Vermont provided the least per student, $1,616, followed by New Hampshire, $1,731; Massachusetts, $2,216; Colorado, $2,224; and Montana, $2,259. More relevant indications of public student support are provided for each category of public institution. Ranking 26b, for example, shows the relative support provided by states to public research universities that include medical programs in their curricula. New York leads the nation in this category, providing $8,643 for each FTE student, a level almost twice the national average of $4,791 for students attending similar schools. Ranking 26f shows state distribution of support for comprehensive institutions. Alaska leads the nation in this category, providing $13,510 per student. On average, however, states typically spend $2,916 to support students in these institutions. Rankings in state support per student for other categories of institutions are shown in ranking tables 26a-k. In fiscal year 1981, the averages and ranges of state support levels per student by type of institution were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$ 3,099	AK-$10,274	VT-$1,616	26a
Research univ., medical	$ 4,791	NY-$ 8,643	TN-$2,300	26b
Research univ., nonmedical	$ 3,856	CA-$ 6,777	CO-$1,619	26c
University, medical	$ 3,801	VA-$ 5,810	OH-$2,419	26d
University, nonmedical	$ 2,948	CA-$ 6,640	OR-$1,883	26e
Comprehensive	$ 2,916	AK-$13,510	CO-$1,683	26f
General baccalaureate	$ 2,440	AK-$12,640	CT-$ 578	26g
2-year academic & comprehensive	$ 1,982	AK-$ 6,629	VT-$ 868	26h
2-year occupational	$ 2,183	AK-$ 7,370	IN-$1,087	26i
Health professional	$26,167	CT-$60,383	PA-$5,243	26j
Other professional & specialized	$ 2,900	NC-$ 8,883	GA-$1,690	26k

b. Tuition and Fees Revenues

Tuition and fees provided a far smaller share of revenues at public institutions as compared with independent institutions, 16 percent versus 50 percent. However, for public institutions with tuition-setting authority, tuition and fees represent the key source of revenues for budget balancing. Typically, there is a trade-off between state appropriations and tuition, with the latter providing the residual operating capacity not covered by state appropriations. Although in 1981 the states collected, on average, $838 per student in tuition and fees, there were substantial variations from this norm among the states. Vermont collected the largest amount from tuition, $2,725 per student. Tuitions for New Hampshire at $1,947, Pennsylvania at $1,728, Delaware at $1,469, Ohio at $1,402, Michigan at $1,309, and Colorado at $1,294 likewise provided an important source of funds, at levels more than 50 percent above national rates. By contrast, the District of Columbia relied less on tuition funds than any state, collecting only $357 per student in support. Other states collecting low tuition included California at $360, Hawaii at $435, Texas at $512, North Carolina at $515, West Virginia at $533, Oklahoma at $543, Florida at $557, Montana at $564, Nevada at $588, and Washington at $589. Ranking table 27a provides these distributions for the public sector as a whole. Ranking tables 27b-k provide rankings of the states for specific categories of institutions. Averages, highs, and lows in tuition and fees per student in FY1981 by institutional group were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$ 838	VT-$2,725	DC-$357	27a
Research univ., medical	$1,316	PA-$2,759	OK-$615	27b
Research univ., nonmedical	$1,189	NH-$2,439	TX-$461	27c
University, medical	$1,336	PA-$2,897	NM-$712	27d
University, nonmedical	$1,122	DE-$1,918	FL-$546	27e
Comprehensive	$ 831	VT-$3,313	DC-$357	27f
General baccalaureate	$ 926	MD-$3,206	CT-$ 75	27g
2-year academic & comprehensive	$ 445	PA-$1,032	CA-$ 71	27h
2-year occupational	$ 579	VT-$1,537	CA-$ 81	27i
Health professional	$1,727	NJ-$6,099	SC-$324	27j
Other professional & specialized	$1,108	CO-$2,792	WV-$ 15	27k

c. Total Education and General Revenues

The foregoing rankings of state appropriations and tuitions indicate the extent to which the states and particular types of institutions within the states rely on these sources for funding. The combined effect of this funding, along with support from endownents gifts, and other sources, is reflected in total E&G revenues. These amounts, which exclude revenues from government grants and contracts, represent institutional resources available for support of general and primary operations, including functions such as instruction, academic support, student services, and administration. On average, U.S. public institutions have $4,499 per student for such operations. Alaska leads with $13,283 per student in the public sector, followed by the District of Columbia with $8,183, Wyoming with $7,451, Vermont with $5,685, and Iowa with $5,649. However, these all-inclusive summary measures for the public sector are less useful than specific values for each type of institution, which provide more reflective indications of state structures of higher education. By category of institution, the averages and range values for total E&G revenues per student in FY1981 were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$ 4,499	AK-$ 3,283	MT-$ 3,072	28a
Research univ., medical	$ 7,742	NY-$ 3,933	OK-$ 3,647	28b
Research univ., nonmedical	$ 6,079	SC-$ 9,326	OK-$ 4,025	28c
University, medical	$ 5,988	VA-$ 8,875	OH-$ 4,715	28d
University, nonmedical	$ 4,538	WY-$ 9,392	OR-$ 3,562	28e
Comprehensive	$ 4,022	AK-$ 7,864	OK-$ 2,432	28f
Baccalaureate	$ 3,592	AK-$15,665	CT-$ 761	28g
2-year academic & comprehensive	$ 2,594	AK-$ 8,133	VT-$ 1,485	28h
2-year occupational	$ 2,944	AK-$ 9,966	FL-$ 1,688	28i
Health professional	$34,850	NJ-$70,533	WV-$14,162	28j
Other professional & specialized	$ 4,464	NC-$ 1,923	OK-$ 2,409	28k

d. **Government Grants and Contracts**

Government, particularly the federal government, is the principal sponsor of research and other contracted activities at colleges and universities. Overall, these government revenues provide 15 percent of public institutional revenues. However at some types of public institutions, the share contributed by this source of funds is much higher, 30 to 35 percent. The level of funds provided through government grants and contracts for research and other universities only is shown in ranking tables 29a-e, in dollars per faculty member. These schools conduct the bulk of research and hence receive the majority of government grants and contracts. The figures use the headcount of 9- and 10-month faculty. If large numbers of faculty are on 11- and 12-month contracts, the numbers shown will be overstated, since these faculty members are not counted and hence do not appear in the denominator. The averages and ranges for government grants and contracts per faculty member in FY1981 were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$21,384	AK-$ 49,076	DC-$ 9,341	29a
Research univ., medical	$58,083	NY-$169,167	OK-$14,901	29b
Research univ., nonmedical	$33,435	NM-$105,935	SC-$11,021	29c
University, medical	$26,041	VA-$ 52,236	OH-$12,957	29d
University, nonmedical	$12,772	CA-$ 31,557	IN-$ 4,241	29e

e. **Instruction Expenditures**

The primary function at most public institutions is teaching and educating students. Hence, relative expenditures for instruction are an important measure of institutional emphasis among the states. National averages indicate that in 1981, public institutions spent an average of $2,217 per student for direct instruction. The range of expenditures by type of institution was substantial, with health professional institutions spending the most, $17,350 per student, and two-year academic/comprehensive institutions spending the least, $1,371 per student. Ranking tables 30a-k show these variations, by state, for each category of institution.

f. **Research Expenditures**

On average, public institutions spent $15,786 per faculty member for research. However, public research universities (with medical programs) spent an average of $60,662 per faculty member, with one state, New York, showing $436,186 per faculty member (this number is probably an error caused by an undercounting of faculty). Nonmedical research universities spent $39,295 per faculty member, while nonresearch universities spent on average $14,507 and $7,602 per faculty member, depending on whether their institutions did or did not have medical programs. Tables 31a-e provide these rankings.

Independent Institutional Finance

Tuition and fees are the primary source of funds for independent institutions, contributing 50 percent of their revenues. Income from government grants and contracts was next in importance and provided 19 percent of funds, followed by gifts, providing 12 percent; endowments, providing 7 percent; state and local appropriations, providing 2 percent; and other diverse sources, providing 10 percent. (See rankings 44a-e for state variations in these patterns.) For independent institutions, tuition, gifts, and endowments are the key sources of funds that support general operations.

a. **State and Local Appropriations**

State and local appropriations are a very minor source of financial support for private institutions and usually are provided to assist specific numbers of state residents enrolled in particular programs such as medicine, veterinary medicine, and nursing. Only 27 states receive such support, with Maryland leading the nation at $399 per student. (See ranking table 32.)

b. Tuition Revenues

The average U.S. private institution collected $3,805 per student in tuition and fees, but the range spanned from a high of $4,936 in Vermont to a low of $1,607 in Idaho. Table 33 shows the variations by state.

c. Total E&G Revenues

The key concern of all institutions is the total amount of operating funds. As indicated in the preceding tables, the average public institution functioned with $4,499 per student. The average private institution functioned with $6,154 per student, an amount which is 37 percent greater than that of public institutions. However, these averages obscure differences in the numbers and types of institutions that exist in the public and independent sectors. For instance, in the public sector, two-year institutions and comprehensive institutions greatly outnumber other types of schools, and concomitant numbers of students are enrolled in them. For the independents, baccalaureate schools are more numerous and represent a substantial share of private sector enrollments. Universities are a key component of each sector. Importantly, independent institutions are substantially more graduate in their orientation (18 percent versus 8 percent at public institutions) as well as being smaller on average (1,250 students versus 4,482 students at public institutions). Both these conditions imply a greater costliness for the private sector. Tables 34a-k provide rankings of the states for different categories of independent institutions in terms of total E&G revenues per student, excluding funds from government grants and contracts. Independent institutions showed the following averages and distributions in total E&G revenues per student in FY1981:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Independent, total	$ 6,154	AK-$10,617	NV-$2,729	34a
Research univ., medical	$12,230	MD-$20,785	FL-$7,205	34b
Research univ., nonmedical	$13,879	MA-$17,553	CA-$3,139	34c
University, medical	$ 8,270	MA-$10,591	WI-$4,769	34d
University, nonmedical	$ 6,673	NJ-$14,093	NY-$5,533	34e
Comprehensive	$ 5,077	DC-$24,970	MS-$3,266	34f
Baccalaureate	$ 5,012	ME-$ 7,674	NV-$2,729	34g
2-year academic & comprehensive	$ 3,555	WI-$19,752	IN-$1,497	34h
2-year occupational	$ 2,942	MT-$13,592	OK-$1,187	34i
Health professional	$27,856	TX-$69,867	CA-$7,497	34j
Other professional & specialized	$ 4,986	VA-$14,759	DE-$2,074	34k

d. Government Grants and Contracts

The typical private institution received $35,227 per faculty member in government grants and contracts. The range of this support, however, varied tremendously by state, with private institutions in Maryland receiving $99,353 per faculty member and those in Idaho receiving $3,028 per faculty member. There was also substantial variation among types of institutions. Research universities with medical programs received on average $122,965 per faculty member; those without medical, $109,854 per faculty member. Universities with medical programs received $4[illegible],691 per faculty member; those without medical, $22,837 per faculty member (see rankings 35a-e).

e. Instruction Expenditures

Independent institutions, like public institutions, showed parallel variations in instructional expenditures by type of institution. On average, private institutions spent $2,715 per student on instruction. These expenditures varied from an average high of $6,731 for research universities with medical programs to an average low of $1,057 per student for two-year occupational institutions. Rankings 36a-k show these distributions by type of institution.

f. Research Expenditures

On average, independent institutions spent $20,699 per faculty member in research, ranging from $61,093 in Maryland to $60 in Kentucky. In most states, the independent institutions spent less than the $20,000 per faculty for research. (See rankings 37a-e for state differences.)

Recent Trends

a. State and Local Appropriations

Between 1977 and 1981, state and local appropriations averaged increases of 47.2 percent for public institutions and 36.7 percent for independent institutions. During this period, appropriations for public institutions increased in all states, ranging from a 106 percent increase in Louisiana to a 22 percent gain in Pennsylvania. Increases in state and local appropriations between FY1977 and FY1981 by type of institution were as follows:

	Average Increase	Ranking Table
Public, total	47.2%	38a
Research univ., medical	49.1	38b
Research univ., nonmedical	43.2	38c
University, medical	65.2	38d
University, nonmedical	43.7	38e
Comprehensive	48.0	38f
Baccalaureate	48.6	38g
2-year academic & comprehensive	39.5	38h
2-year occupational	50.6	38i
Health professional	60.4	38j
Other professional & specialized	33.9	38k
Independent, total	36.7	38l

b. Enrollments

Public enrollments from 1977 to 1981 increased by 4.9 percent on average. The largest rates of public-enrollment growth were in Florida at 40.8 percent, Nevada at 27.8 percent, Iowa at 13.3 percent, Arkansas at 12.7 percent, Virginia at 12.1 percent, and South Carolina at 11.2 percent, creating the need for additional state support. Six states experienced declines in public FTE enrollment: the District of Columbia at 27.7 percent, Hawaii at 5.5 percent, California at 3.4 percent, Georgia at 1.7 percent, Oklahoma at 1.4 percent, and Vermont at .6 percent. Enrollment gains in the public sector were largest in the health professional sector (14.1 percent), followed by the two-year occupational institutions (12.3 percent). The other professional and specialized institutions were the only ones with losses in the public sector, enrollments dropping by 10.1 percent. Enrollments at independent institutions increased in this period at a larger rate than did public enrollments, 10.8 percent versus 4.9 percent. All but six states shared in these gains in the independent sector. Enrollment decreases in the private sector occurred in New Mexico at 14.2 percent, Delaware at 14.0 percent, South Carolina and South Dakota at 4.7 percent, West Virginia at 1.3 percent, and Utah at .8 percent. Again, changes in enrollment varied by type of institution. The following patterns occurred in this period:

	Percent Change in Enrollments 1977-1981	Ranking Table
Public, total	4.9%	39a
Research univ., medical	3.3	39b
Research univ., nonmedical	5.6	39c
University, medical	4.9	39d
University, nonmedical	1.9	39e
Comprehensive	2.5	39f
Baccalaureate	6.7	39g
2-year academic & comprehensive	6.5	39h
2-year occupational	12.3	39i
Health professional	14.1	39j
Other professional & specialized	-10.1	39k
Independent, total	10.8	39l

c. Constant Dollar Revenues per Student

- *Appropriations.* Overall, between 1977 and 1981, public institutions experienced a small .3 percent growth in the real-dollar value of their appropriations, after adjustment for enrollment gains. Given the importance of state funding to public institutions, the small size of these gains signals a virtual steady state for public higher education. And for half of the states this was a belt-tightening period, with purchasing power declines ranging from nearly 20 percent in Montana to less than 1 percent in Delaware. Four states had losses of 15 to 20 percent: Montana (19.8), Florida (19.2), Wisconsin (16.0), and Massachusetts (15.0). Six states had losses between 10 and 15 percent, including Nevada (14.7), Pennsylvania (13.2), Minnesota (12.7), Rhode Island (12.4), Iowa (12.3), and Michigan (10.5). Seven more states had losses between 5 and 10 percent. States in this category included Idaho (9.8), Colorado (9.1), Nebraska (8.6), South Dakota (7.5), Oregon (6.7), New Hampshire (6.5), and Ohio (6.1). Therefore, 17 states had losses exceeding 5 percent.

  Among the states that did well in this period are the District of Columbia, with constant-dollar gains per student from the state of 51.4 percent, Louisiana with 45.7 percent, Wyoming with 29.9 percent, Oklahoma with 27.7 percent, and Mississippi with 20.4 percent.

  The average value of state funding to the independent sector declined by 11.8 percent during this period, with decreases in sixteen states. The decline was greatest in California, where the purchasing power of state funding in the independent sector fell 94.8 percent per student. Substantial decreases were also evident in the District of Columbia, Iowa, Louisiana, Oregon, and Pennsylvania. Other states had significant though lesser losses than these states. (See rankings 40a and b.)

- *Tuition and Fees.* Between 1977 and 1981, the real value of tuition and fees per student fell somewhat in the public sector (by 1.6 percent) while gaining 2.3 percent in the independent sector. Given the heavy reliance of independent institutions on tuition, these gains were particularly important. As indicated in ranking 41b, the independent sector made real-dollar gains in tuition in 37 states and experienced declines in 13 states. For public institutions, real-dollar losses in tuition were much more prevalent. Only 23 states obtained tuition improvements. The District of Columbia led the nation in its tuition increases, with real-dollar gains per student of 70.0 percent. By contrast, Alaska had a loss of 35.2 percent.

- *E&G Revenues.* The net effect of revenue changes in the public and private sectors created an overall improvement in the funds available for higher education, even after enrollment changes and inflation adjustments. Net revenues grew by 1. 7 percent in the public sector and by a slightly greater rate of 3. 2 percent in the private sector. As is evident, public-sector gains were tied to state appropriations and, while small, did compensate for the slight real-dollar decline in tuition. Gains in the independent sector were largely tuition based. Gains in total funds were evident in the public sector in 26 states and in the independent sector in 33 states. Still, losses in one or both sectors were experienced in nearly 20 states. Montana in particular suffered a serious loss in its public-sector purchasing power, which fell 24. 1 percent per student. Examples of other states whose public sectors faced hard times due to losses included: Florida, 20. 8 percent; Nevada, 13. 9 percent; Wisconsin, 13. 4 percent; Rhode Island, 11. 7 percent; Iowa, 9. 1 percent; Nebraska, 6. 9 percent; Michigan, 6. 0 percent; New York, 5. 6 percent; and Pennsylvania, 5. 0 percent. Gains and losses in the states are shown in rankings 42a (public) and 42b (independent).

Importance of Different Revenue Sources

There are major differences among the states and between the public and private sectors in their means of financing higher education. For public institutions, state and local appropriations provided the lion's share of funds, representing 58. 8 percent of all revenues. Tuition was next in importance, accounting for 15. 9 percent of revenues, followed by government grants and contracts at 14. 8 percent. These three sources furnished 90 percent of the E&G funds allocated to public higher education. For the independent sector, tuition carried the major load, 50. 1 percent; government grants and contracts contributed 19. 1 percent; gifts, 12. 4 percent; and endowment income, 7. 1 percent.

There were, however, major variations among the states in their reliance on these sources. For example, the public sector in the District of Columbia received 80. 9 percent of its funds from local sources (in this case federal), followed by California (state and local funds), 68. 7 percent; South Carolina, 66. 5 percent; and Oklahoma, 66. 1 percent; Louisiana, 65. 5 percent; and Florida, 65. 3 percent. These states/localities assumed an unusually large role in the financing of public higher education. At the other end of the spectrum were states like Vermont, whose state and local sources provided only 21. 7 percent; New Hampshire, 34. 1 percent; Colorado and Delaware, 40. 5 percent; and Utah, 44. 9 percent (refer to table 43a). These states carried far smaller shares than the 60 percent load that was typical of the other states. To compensate to some degree, each of these states, except Utah, collected large shares of their revenues from tuition (generally more than 20 percent) and ranked among the top 10 in the country in their reliance on tuition as a source of funds.

Independent institutions showed an even greater degree of variability in reliance on tuition, ranging from a high in Arizona of 75. 9 percent to a low in Alaska, where tuition provided 26. 3 percent of revenues (see ranking table 44b).

Tables 43a-e provide rankings of the states for public institutional reliance on various funding sources. Comparable data for private institutions appear in rankings 44a-f.

Faculty Salaries

At every rank, faculty at public institutions in Alaska were the best paid, and Alaska had the highest all-ranks average. However, the well-known high cost of living for Alaskans was not factored in these salary levels, thereby obscuring whether these were real or cost-of-living differences. For the all-ranks average, Alaska was followed by California, Arizona, the District of Columbia, and New York. Faculty at public institutions in Georgia showed the greatest rates of increase in salaries between 1977 and 1981, gaining 49. 2 percent. Faculty in public institutions in South Carolina were next, with salary gains of 47. 5 percent for the period. Other states that showed recent gains included Louisiana with 44. 7 percent, Oklahoma with 41. 9 percent, and Connecticut with 41. 0 percent. At the other end of the spectrum, faculty in the Hawaii public sector showed only a 19. 6 percent gain, those in Oregon 22. 9 percent, in Texas 26. 5 percent, and in Montana 26. 6 percent. Tables 45a-e provide public-sector rankings by state for average salaries and percentage changes in salaries.

In the independent sector, California faculty led the nation in all-ranks salary averages (15 percent above average). Private faculty salaries improved most in North Dakota at 57. 5 percent, followed by Idaho at 41. 8 percent; New Mexico at 41. 0 percent; California at 39. 2 percent; and Michigan at 38. 6 percent. Tables 46a-e provide these figures for independent institutions by state.

The remainder of this chapter presents state rankings for the key measures used in this study.

CHAPTER 3: STATE BY STATE REPORTS

Comparisons of funding patterns for all 50 states, the District of Columbia, and the U.S. average are described in this chapter. The state profiles, treated in alphabetical order, are the central focus of this study. The state profiles follow the summary of general patterns and trends for the nation.

U.S. Average

Recent Trends

Between 1977 and 1981, state and local funding for higher education showed small gains in constant dollars per student. For public institutions, state appropriations grew by 47.2 percent, which, after adjustments for inflation and for a 4.9 percent increase in public enrollments, meant a .3 percent gain in constant dollars per student. The pattern of revenue changes by sector was mixed, although six of the ten sectors had real-dollar gains in state appropriations per student. In general, the universities and comprehensive institutions fared well, as did the professional schools. By contrast, the two-year schools experienced losses--6.4 percent for the academic/comprehensive two-year schools and 4.2 percent for the occupational institutions.

Tuition revenues fell in value between 1977 and 1981, by 1.6 percent. Combined, the small gain in state appropriations and the loss in tuition netted a small increase (1.7 percent) in the constant-dollar value of revenues per student in the public sector.

In the private sector, the increase in the purchasing power of general operating funds was slightly larger, amounting to 3.2 percent per student. All categories of private institutions shared in these improvements except the two-year occupational sector. That sector found its funding diminished by 4.4 percent.

State Financing of Higher Education

In 1981, state and local government support for higher education averaged $100 per capita. Ninety-two percent of these funds were allocated to institutions in the form of general support, and 4 percent went for state student aid. The remaining 4 percent was channeled indirectly to higher education as support for state higher education boards and commissions and other functions, including fringe benefits, central services, and tuition reciprocity arrangements. Ninety-six percent of state funds for higher education went to the public sector, and 3 percent went to the independent sector. The remaining 1 percent was not identified by sector.

State Tax Base and Budget

In 1980, the states and localities collectively raised $949 per capita in tax revenues. The largest single source of tax revenues in the states was general sales, which provided 23.7 percent of tax revenues. The next-largest source was individual state income taxes, which accounted for 19.2 percent of tax funds. Residential property taxes yielded 17.3 percent of state tax revenues, followed by selective sales and gross receipts at 12.3 percent, and commercial and industrial property taxes at 10.2 percent. These five tax categories provided 83 percent of state and local tax revenues. Compared to three years earlier, in 1977 the states relied more heavily on general sales and personal income taxes for their revenues.

U.S. Census Bureau data on the distribution of these funds indicate that in 1981 elementary/secondary education received the largest single share at 27 percent, followed by public welfare at 13 percent and public services at 11 percent. Higher education, highways, and health and hospitals each received 9 percent. The remaining funds were used for a variety of other state needs. A comparison of 1981 state spending patterns with those of 1977 indicates that public services, health and hospitals, and highways received increased shares of state budgets, whereas higher education, elementary/secondary education, and "other" miscellaneous received less. Public welfare's 13 percent share held constant over the period.

Higher Education Enrollments

Three-quarters of the 8.8 million FTE students in this country attended public institutions of higher education in 1981. Thirty-one percent of all students attended two-year institutions, 29 percent attended universities, 25 percent attended comprehensive master's-granting institutions, and 10 percent attended baccalaureate colleges. The remaining students enrolled at specialized institutions. Both in absolute terms (numbers of students) and relative to population, there were small gains in higher education enrollments between 1977 and 1981. Enrollments grew by 5.9 percent absolutely and shifted from 38.3 per 1,000 capita in 1977 to 38.7 per 1,000 in 1981. (In part these gains are due to the increasing number of institutions encompassed within the reporting universe.)

Most students attended college in their own state, 76 percent of them going to public institutions and 18 percent to private institutions. Only 6 percent of all students went out of state for higher education. Thus even at independent institutions, on average, 63 percent of the students were residents of that state.

Institutional Finances and Characteristics

Public and independent institutions finance their activities in very different ways. At public institutions, state and local appropriations constitute the major share of funds, providing 59 percent of all educational and general revenues. The importance of state and local funds at public institutions fell slightly between 1977 and 1981, from 60 percent to 59 percent of all E&G funds. By contrast, independent institutions received only 2 percent of their funds from state and local sources. Private institutions instead relied primarily on tuition for their funds, receiving 50 percent of the total from this source. These institutions received 12 percent of their revenues from private gifts and grants, and 7 percent from endowment income. Public institutions received only 20 percent of their funds from those sources (16 percent from tuition and 4 percent from private gifts and endowments). Government grants and contracts were roughly similar in importance at public and private institutions, representing 15 percent and 19 percent of respective E&G revenues.

Public institutions spent a greater share of their funds on instruction and public service than did private institutions--44 percent and 5 percent versus 37 percent and 2 percent. Independent institutions spent larger shares on institutional support activities than the publics (42 percent versus 31 percent), while the shares going to research and academic support were similar for both types of institutions.

Between 1977 and 1981, public institutions showed real-dollar gains per student of 1.7 percent in E&G revenues, while independent institutions experienced a real gain of 3.2 percent. For public institutions, this gain was due in part to increases in state funding. For the independent sector, net gains in tuition of 2.3 percent were responsible for moving total revenues ahead, even in the face of a large 10.8 percent gain in enrollment. Public sector enrollments grew more slowly at 4.9 percent.

By sector, universities generally fared much better than other classes of institutions, particularly in the independent sector, with real gains against inflation ranging between 3 and 12 percent. Net revenues of health professional institutions also moved ahead, by 2.6 percent in the public sector and by 13.9 percent in the private sector. In the independent sector, occupationally oriented two-year institutions were the only class of institutions that did not keep up with enrollments and inflation in this period, showing a real-dollar loss of 4.4 percent in per-student revenues. In the public sector, the pattern was more mixed.

On average, public institutions were three and one-half times larger than private institutions and had a greater emphasis on lower-division studies in their instructional activities. Private institutions enrolled 1,250 students on average (compared to 4,482 for public institutions) and focused more on the graduate level (18 percent of private students studied at the graduate level versus 8 percent of public students). Institutions in both sectors grew slightly larger on average. Faculty generally were better paid at public institutions, although there were important variations by both sector and rank. During this period, faculty salaries grew 33 percent in the public sector and 31 percent in the independent sector. The Consumer Price Index, however, increased by 47.6 percent in this same time period, indicating that the general purchasing power of faculty salaries fell during this period.

ALABAMA

Recent Trends

Alabama notably increased its public support to higher education between 1977 and 1981. Appropriations to the public sector grew by 67.1 percent, a rate more than 40 percent better than average. During this same period, enrollments grew by 6.2 percent, leaving a 12.5 percent net constant-dollar improvement in state and local appropriations for Alabama's public institutions. The significance of this increase is vividly apparent when Alabama is compared to the nation, where there was only a .3 percent boost in inflation-adjusted per-student spending by the states between 1977 and 1981.

These gains kept Alabama in the top quarter of states in terms of per-capita support for higher education. Even so, per-capita support dropped from 22 percent above average in 1979 to 14 percent above average in 1981. Alabama spends $114 per capita for higher education, compared to the U.S. average of $100 per capita--a notable level of support, in light of Alabama's low tax base. The state collects less in taxes than any other state, netting $612 per capita in contrast to a national average of $949. As a result, the state operates its public enterprises with 36 percent fewer funds than the average state.

Although Alabama provides 14 percent greater funding to higher education than average, these funds must support a larger than average number of students at public institutions, including a separate vocational-technical sector. Alabama educates 30.8 FTE students in its public institutions per 1,000 persons in the state, 5 percent more than is typical. In addition, these students are enrolled in relatively more expensive types of institutions. Students are registered in large numbers at universities and comprehensive institutions and, to a much lesser degree, at two-year institutions (23 percent versus a national average of 38 percent). The result is a dilution of relatively generous state support, causing Alabama to shift from an above-average ranking (by 14 percent) in per-capita support to an average position in terms of funding per student.

State Financing of Higher Education

As noted, Alabama spends $114 per capita for higher education. Almost all of these funds (99 percent) support the public sector. Eighty-five percent is distributed directly to institutions for general institutional support; 1 percent is allocated for student aid; and an unusually large portion (14 percent) supports higher education in other ways, primarily going to vocational-technical education. This distribution substantially reduces the total percentage of general support received by public institutions directly. Still, general institutional support per capita (not per student) is 7 percent above the national average.

State Tax Base and Budget

Alabama's economic capacity to collect tax revenues is among the lowest of the states, at $718 per capita, indexed at 75. Only Mississippi and South Carolina have a smaller base of financial activity to tap. All of the major types of tax categories (sales, income) exhibit substantially below average capacity. Compounding this problem, Alabama makes a very modest tax effort (15 percent below average), resulting in tax revenues of $612 per capita (a level 36 percent below the national average) and the smallest pool of public funds of any state. Alabama relies heavily on sales taxes for revenues and makes very little use of property taxes. In 1980, Alabama could have collected an additional $477 million in property tax revenues, had property in this state been taxed at national rates.

Apparently higher education is only minimally affected by this small tax base and is accorded a relatively large share of the state budget. Census data (which include both tax revenues and federal revenue-sharing funds) indicate that 12 percent of the state's budget is spent on higher education, a level substantially above the U.S. level of 9 percent. (From 1977 to 1981, however, higher education in Alabama has seen its share of the state's budget fall from 13 percent to 12 percent.) Health and hospitals (14 percent) and highways (11 percent) are also comparatively well funded in Alabama--at the expense of public welfare, public services, and general state functions, each of which receives 20 to 30 percent less than the national average. The share of state and local funds allocated to elementary/secondary education held constant at 26 percent between 1977 and 1981. In sum, higher education has to be considered a state priority because it receives such a relatively large share of the exceptionally low tax revenues generated.

Higher Education Enrollments

Although relatively fewer residents of Alabama attend higher education institutions anywhere (85 percent of the national rate), the public sector serves a typical number of state residents: 25 per 1,000 capita. However, only half of the normal number of state residents enroll in private institutions in the state or go out of state to any institution. It is low participation in these sectors that reduces total rates of postsecondary attendance to 15 percent below average. Total enrollment at public institutions, however, is 5 percent above average because of substantial migration of students from other states (almost 85 percent above average) and greater numbers of full-time students.

In general, Alabama's public students are more likely to attend universities and comprehensive institutions than two-year schools, which creates a relatively more expensive system to operate. By contrast, students enrolling in Alabama's independent sector are concentrated in general baccalaureate schools and comprehensive institutions.

Institutional Finances and Characteristics

Alabama supports 37 public institutions of higher education: three universities, 12 comprehensive, one baccalaureate, and 21 two-year institutions. Funding for the university sectors (both from the state and in total) exceeds the national average, in part responsive to the greater amount of graduate study at the University of Alabama--Tuscaloosa. These revenues are further supplemented with above-average government grants and contracts. The comprehensive, baccalaureate, and two-year schools, however, function with funds 10 to 30 percent below typical levels, largely because of lower than average state support and low tuition. Further, Alabama's institutions in general are smaller and more graduate oriented, a costly combination that dilutes existing support.

The overall rate of support to public institutions in Alabama reflects the recent increases in state and local funding and tuition revenues. Between 1977 and 1981, total support per student in the public sector improved nearly 10 percent in dollars adjusted for inflation. Only fourteen states exceeded that rate of gain in total revenues per student (excluding government grants and contracts). Two public sectors in Alabama did not share in the gain--the nonmedical university (University of Alabama--Tuscaloosa) and the general baccalaureate (Athens State College), where constant-dollar revenues per student fell 6.4 percent and 15.2 percent, respectively. Institutional reliance on state support fell somewhat recently, from 59 percent in FY79 to 57 percent of total revenues in FY81.

Although real-dollar funding has improved significantly in the public sector, for the independent sector there was a 1.5 percent net loss of real-dollar purchasing power per student, tied primarily to finances of the private comprehensive institutions.

Despite recent public-sector improvements in overall funding, Alabama faculty salaries continue to lag behind national ones. For the public sector as a whole, they trail by 12 percent, with some institutional sectors behind by as much as 18 percent.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first Data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 3,375,467
Postsecondary vocational-technical education	$ 37,151,035 (16,845 FTE)
State boards and commissions	$ 1,060,751
Retirement benefits (including social security)	$ 22,800,000 (estimate)
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 276,760
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0
Tuition and Fees reappropriated by the state? *	

Other Comments

* Tuition and fees are not remitted to the State. They are reported as tuition and fees by the institutions.

Retirement Benefits not reported through HEGIS include $9.8 million for 9 senior institutions (the other 7 report appropriations to HEGIS); $7 million for the junior colleges; and $6 million for the technical institutions outside the HEGIS universe.

State Boards includes appropriations to the Commission on Higher Education and the Postsecondary Division of the State Department of Education.

Source: Alabama Commission on Higher Education

(Indexes shown in bold are based on U.S. average = 100)

ALASKA

Recent Trends

State and local appropriations to higher education rose 72.0 percent in Alaska between 1977 and 1981, which was more than 50 percent better than the U.S. average. This surge in state funding not only allowed institutions to accommodate nearly 11 percent more students but also netted an 11.1 percent improvement in real-dollar state support per student to public institutions. When other revenue sources are considered, the total operating base of public institutions in Alaska increased by more than one-fifth (22.5 percent) on a per-student basis. This represents the third-largest improvement among the states. Only the District of Columbia and Louisiana gained more in inflation-adjusted revenues per student. Although the significantly higher prices in Alaska compared to the rest of the U.S. temper these findings, the direction of change is encouraging. However, how much of this change is price related and how much is true gain is not discernible.

State Financing of Higher Education

Alaska spends $277 per capita for higher education, a level almost three times above national rates. Eighty-nine percent of this support is funneled directly to public institutions in the form of appropriations, with most of the remainder provided for student aid. The remaining share (3 percent) provides indirect assistance to higher education, primarily for postsecondary vocational-technical education.

State Tax Base and Budget

Alaska raises over four times more tax revenues than the typical state because of inherent wealth and a strong tax effort. Alaska has a tax capacity two and one-half times greater than most states. This is evident in many tax categories, especially severance taxes (index 5422), individual and corporate incomes (indexes 187 and 180 respectively), and residential and industrial properties (indexes 134 and 188). The state makes the most use of its capacity in the area of severance taxes (ranks 2nd), obtaining 74 percent of its revenues from this source alone. According to the Census Bureau, Alaska spends a total of $7,211 per capita in state funds, four times the national level. Alaska's spending priorities are most evident for public services and other miscellaneous categories. Public welfare and health and hospitals receive very small shares of the state budget, shares that are 60 to 65 percent below average. Elementary/secondary education also receives a below-average share, smaller by 30 percent. Only 7 percent of its funds are allotted to higher education, a rate 22 percent below average. Still, because of the size of the state's tax base, higher education receives funding (in dollars per capita) that is almost three times the national level.

Higher Education Enrollments

Alaska residents enroll in higher education to a lesser degree than is typical nationally, with 18 percent fewer residents attending. Because two and a half times as many Alaskans attend college in other states (compared to the national average), enrollment of residents within the state at both public and independent institutions is below average.

The state's public institutions enroll almost 20 percent fewer students than is typical. Despite very heavy enrollments by first-time resident students (at twice the U.S. rate) and huge numbers of nonresidents (10 times the average), low student-persistence rates and heavy ratios of part-time students reduced Alaska's enrollment to 19 percent below average in 1981. These enrollment rates represent a significant decline from two years before when public enrollments matched the U.S. average. Very few Alaskans attend independent institutions within the state. The majority of students in the state enroll in either the two comprehensive institutions or the nine two-year institutions. In absolute terms, the actual number of students in public institutions is very small: 9,629 FTE in total.

Institutional Finances and Characteristics

Although price differences cloud the interpretation of financial data in Alaska, public institutions in the state operate with revenues that are three to four times national levels. At the comprehensive institutions particularly, funding is almost four and one-half times national rates, averaging almost $18,000 per student. In addition, Alaska receives an exceptional number of government research grants, a further contribution to the state's funding base. Yet, despite substantial research activity at comprehensive institutions, graduate enrollment at them is only slightly higher than the national average.

Institutions in Alaska are exceptionally small, usually enrolling only 800 students, one-fifth the norm. Faculty salaries in Alaska's public sector are 50 percent above the national average, having increased 11 percent faster than the national rate over the years 1977 to 1981.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 9,494,000
Postsecondary vocational-technical education	$ 2,205,500 (190 FTE est.)
State boards and commissions	$ 1,104,300
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

ARIZONA

Recent Trends

Gains in state and local appropriations to public institutions from 1977 to 1981 outpaced both inflation and enrollment growth in Arizona. The 50.9 percent increase in state funding created a 3.6 percent real-dollar gain in finances, even with a 4.1 percent increase in enrollments. Coupled with a 26.4 percent advance in constant-dollar tuition revenues, Arizona institutions experienced a 10 percent constant-dollar increase in their total E&G revenues per student. As a result, Arizona is among the 24 states achieving real-dollar gains in state support per student and among the 26 states with gains in total funding for the public sector.

On average, public institutions found their state funding increasing by 3.6 percent between 1977 and 1981 in inflation-adjusted revenues per student. Arizona's gain in total revenues of 10.0 percent is almost six times larger than the average nationally.

State Financing of Higher Education

Arizona spends $124 per capita for higher education, a level 24 percent above the national average. These funds are being spent in the public sector, almost entirely in the form of direct institutional appropriations. There is no state student aid program in Arizona.

State Tax Base and Budget

Arizona ranks 38th nationally in tax capacity. However, through a substantial tax effort, Arizona collects taxes that are 4 percent greater than the national average, resulting in $5[illegible]8 per capita for public purposes in 1980. Arizona raises 72 percent of these taxes through above-average general sales taxes and property taxes.

In Arizona's budget, higher education, highways, and public services receive above-average shares of the state pie. Higher education in particular is favored, receiving 15 percent of the state's budget, a level 67 percent above the national average. Further, this share increased from 1977, when it was 14 percent of the state's budget. By contrast, public welfare and health and hospitals receive shares of the state budget that are very low by national standards.

Higher Education Enrollments

Arizona residents achieve very high rates of access to higher education, ranking the state 9th in the nation. Thirty-six of every 1,000 persons in the state enroll. In fact, public institutions of higher education enroll 27 percent more state residents than is typical. Very few Arizonans attend independent institutions in the state, and only half as many Arizonans as average migrate to other states for postsecondary education. While these rates of access are impressive, they fell by 10 percent from 1979 to 1981.

In total, Arizona's public institutions of higher education enroll 50 percent more students than the average (44 FTE students for every 1,000 persons in the state), more students per capita than any other state. The entrance rate for first-time students is more than twice the national average, including a very substantial in-migration of students from other states (six times the national rate and second only to Alaska). However, students in Arizona more often attend higher education institutions on a part-time basis and for shorter durations than students in other states, thus lessening somewhat the strong enrollment demand.

Far more students enroll in research and doctoral institutions in Arizona than is typical. More than half of the state's public students are in universities, in contrast to the national average of 31 percent. Similarly, Arizona places more emphasis on two-year institutions, and 46 percent of the state's students enroll in this sector, in contrast to the U.S. average of 38 percent. The majority of postsecondary students enroll in one of two main sectors: the university or the two-year institutions.

Institutional Finances and Characteristics

In 1981, despite recent improvements in funding, per-student revenues at the public institutions in Arizona were below the comparable levels received by similar institutions, largely because of below-average state funding. The research university, the University of Arizona, received near-average funding from the state but overall operated with revenues 9 percent less than average. The universities with no medical programs, Arizona State University and Northern Arizona University, received about 5 percent less per student from the state and, overall, had 3 percent less revenues than similar institutions. The large academic two-year sector in Arizona, representing 14 institutions, received approximately 12 percent less per student from the state than was typical and, overall, had revenues 7 percent less than the norm. The two two-year occupational institutions in the state operate with funding very close to the average, a marked change from two years before.

The University of Arizona spends less on instruction and more on academic support and public service than is typical of such institutions. Arizona State and Northern Arizona University also have large public-service components and spend more on research than other institutions in this category.

The University of Arizona, with over 26,000 students, is somewhat larger than other research universities with medical schools. The University of Arizona is more graduate in its focus (21 percent of its students study at this level) in contrast to the universities without medical, which enroll about 5 percent fewer graduate students than is typical of such schools.

Faculty salaries in Arizona are above national levels and improved markedly between 1977 and 1981, particularly for the upper ranks.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 145,587*
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 1,519,700
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 2,241,400
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 11,092,974
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 4,396,517
- other	$ 0
Tuition and Fees reappropriated by the state? **	

Other Comments

* This amount is for state appropriated matching of SSIG only. Additional matching from local and institutional sources are not included. Total Arizona SSIG program for was $1,704,885.

** Registration and fees are not appropriated, but are used as an offset to fund the operating budget.

(Indexes shown in bold are based on U.S. average = 100)

ARKANSAS

Recent Trends

The substantial four-year increase of 52.3 percent in state and local funding for public higher education in Arkansas from 1977 to 1981 was more than consumed by an enrollment growth of 12.7 percent (4th in the nation) and 39.9 percent inflation. As a consequence, public institutions in Arkansas lost 3.4 percent of their state-funded purchasing power during that period. Decreases were particularly evident in the research university sector (the University of Arkansas main campus), which enrolls almost 30 percent of the state's public students. This sector experienced an 11.6 percent decline in real-dollar state funding, offset somewhat by a 6.3 percent increase in constant-dollar tuition revenues. This, with the changes in other revenue categories, created an overall 8.7 percent decrease in constant-dollar E&G funding per student. Comprehensive institutions and two-year colleges, which together enroll 53 percent of the state's public students, sustained a gain in total E&G revenues of 6.2 and 8.2 percent per student, respectively. The seven independent general baccalaureate institutions in Arkansas increased tuition sufficiently to offset enrollment increases and inflation, with total E&G revenues per student in constant dollars holding steady.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Arkansas was $71.70 per capita in 1981, 21 percent below the national average, ranking Arkansas 41st in the nation. But public enrollments were equally below the national average, so state appropriations of $3,083 per student compared favorably with the average of $3,099.

Government support of student financial aid equaled $.60 per capita, ranking Arkansas 34th in this category. The national average was $3.80 per capita. The state appropriates $670,000 for state boards and commissions.

State Tax Base and Budget

Arkansas is a relatively tax-poor state with a potential tax capacity of $749.50 per capita, 21 percent below the national average of $948.73. It ranks 47th in the nation in this regard. This is the result of low tax potential in general sales, individual and corporate income, and residential and commercial property.

The tax effort of Arkansas is also low, 86 percent of national average tax rates, with a state rank of 37th. As a result, collected tax revenues of $640.97 are far below average (68 percent), ranking the state 48th in tax funds available to support public services.

Arkansas allocates 12 percent of its tax revenues to higher education, slightly above the U.S. average of 11 percent. However, because of the low tax collections, the resulting appropriations of $72.60 per capita for institutional support and student aid are 27 percent below the national average.

If the operating budget of the state (including nontax revenues such as tuition) is taken as a whole, highways receive the highest share of the budget relative to national averages, followed by education and health and hospitals. Public services (police, fire, sewerage, and parks) receive a disproportionately low share compared to national averages.

Higher Education Enrollments

Arkansas, with 25 students per 1,000 population, is ranked 48th in the number of residents attending college anywhere. The national average is 34 per 1,000 population. Only one of the 25 resident students per 1,000 population attends college out of state. Twenty-one residents per 1,000 population, or 84 percent, attend public institutions within the state.

The colleges and universities of Arkansas enroll 64,306 FTE students, a small higher education enterprise relative to the state's population. The public sector is proportionately larger than the private sector compared to the national average. Two-fifths of the 53,496 FTE public students attend the state's four comprehensive institutions; 14,975 are enrolled at the nonmedical research university (main campus of the University of Arkansas).

The state is ranked 43rd in public enrollment load, with 23.3 FTE students per 1,000 population, 21 percent below the national average. Only 46.4 percent of the state's high school graduates enter Arkansas public institutions, compared to the U.S. average of 62.4 percent.

Institutional Finances and Characteristics

Educational and general revenues (excluding government contracts) per student are near the national average for Arkansas public institutions, except for the four comprehensive colleges. The comprehensive colleges are 20 percent underfunded, largely due to lower than average appropriations. At these institutions, expenditures for instruction per student, research per faculty member, and public service per 1,000 capita are all substantially below average. Faculty salaries are 18 percent below average.

The University of Arkansas sets student tuition 30 percent below average for research universities without medical schools, but this is compensated for by much higher than average "other" E&G revenues. Yet the university spends 34 percent less than average for instruction per student and 40 percent less on academic support per faculty member. Research and public-service expenditures are far above average. The relatively low instruction expenditures are reflected in full-time faculty salaries, which are 9 percent below average. This suggests that the low instructional costs are due, in part, to low salaries.

The 16 independent colleges in Arkansas are substantially underfunded, with tuition revenues far below average. As a consequence, expenditures for instruction and academic support average 50 and 62 percent below average, respectively.

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 1,394,919
Postsecondary vocational-technical education	$ *
State boards and commissions	$ 669,941
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 4,282,298
- auxiliary enterprises	$ 4,562,234
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

* Arkansas has 16 postsecondary vocational-technical institutions but the Department of Higher Education does not collect any data on these schools.

CALIFORNIA

Recent Trends

State and local appropriations to public higher education in California increased by 44.8 percent between 1977 and 1981, close to the U.S. average. At the same time, California was one of six states to face a loss in FTE enrollments in the public sector. Enrollments decreased by 3.4 percent in California, in a period when enrollments were growing by nearly 5 percent throughout most of the country. As a result, higher education in the state was able to make major gains against inflation as revenues per student grew by 10.3 percent in the public sector in real-dollar terms. These revenue improvements were largely financed by increases in both state support and tuition revenues, with 7.1 percent and 8.4 percent constant-dollar gains per student, respectively. All sectors of public institutions shared in these gains, except the two-year schools and University of California--San Francisco, the health professional institution. Losses in purchasing power were particularly difficult for the two-year institutions, especially those that stress occupational programs. With the decreases in local government support, these institutions operate with below-average funding (4 percent below average at the academic/comprehensive two-year schools and 10 percent below average at the two-year occupational schools).

State Financing of Higher Education

California ranked 3rd in the country in its funding of higher education in 1981. On average, each citizen of the state provided $152 to support higher education, a rate 52 percent above average. Ninety-eight percent of these funds were channeled directly to the public sector, with 95 percent distributed through direct appropriations to the institutions. Three percent was channeled to students in the form of student aid, and 2 percent provided other indirect support to higher education. California was among the 32 states that provided student aid to students attending independent institutions.

State Tax Base and Budget

California is one of the wealthiest states in the nation and ranked 5th among the states in 1981 (as compared to 9th in 1977). Its tax capacity, 16 percent above the norm, is heavily centered in the traditional tax sources: general sales, residential property, and individual income. Tax rates fell in recent years in California; in 1977, they were 20 percent above average, and in 1981 they had shifted to just 1 percent above average. Still, given the strong inherent economic strength of the state, California's state and local government operates with a pool of tax revenues that is nearly 20 percent above average and 7th largest in the nation on a per-capita basis--$1,129 per person. Although this base is still large by national standards, it does represent some significant belt-tightening within the state. In 1977, the state operated with funds that were one-third larger than average; in 1981, it functioned with one-fifth more than the average.

California allocated an above-average share of state revenues to higher education: 11 percent of its total state budget (from all sources including federal revenue-sharing funds) and 14 percent of its tax-derived budget. Other state priorities were evident in the large shares accorded public welfare and public services. On the other hand, state emphasis declined substantially in elementary/secondary education, dropping from 26 percent of the total budget in 1977 to 23 percent in 1981. Health and hospitals, although receiving a somewhat smaller share of the state budget than average, increased their slice of the state pie during this period, from 7 percent to 8 percent. Highways continued to be a low priority and, at 5 percent of the budget, received almost half of the average share.

Higher Education Enrollments

California is the most populous state in the nation and along with Massachusetts enrolls more students in higher education than any other state. In 1981, 41 of every 1,000 Californians attended postsecondary-education institutions, a rate 21 percent above the U.S. average of 34 per 1,000. This high rate of access was due primarily to the state's public system, which enrolled 38 percent more residents than did the public systems of other states. They attend independent institutions in the state at a rate almost 20 percent below national rates, and the number of Californians selecting institutions outside their home state is proportionately very small. (The number is less than 1 percent and therefore shown as 0.)

California educates students (from both in and out of state) in its public institutions at a rate 35 percent higher than average. These enrollments are the result of an extremely high entrance rate for first-time resident students (80 percent above average), above-average in-migration from other states (16 percent above average), and relatively high retention rates (4 percent above average). Although these 1981 rates of access are substantially above the national average, still they represent a major decline from 1975. At that time, FTE enrollments were 47.1 per 1,000 population in public higher education. By 1981, the rate had decreased to 39.6 per 1,000, a fall of 16 percent. The decline in access rates may well be tied to the decline in the number of high school graduates during this period. California now graduates 12 percent fewer students from high school than the average state.

California provides access through a tiered system of universities, state colleges, and community colleges. And, in marked contrast to national patterns, California provides its high rates of student access primarily through community colleges, which enroll 60 percent of all public students. This share is much larger than the proportion (38 percent) typically educated in public community colleges in the United States. On the other hand, California enrolls only 14 percent of its students in universities, in contrast to the national average of 31 percent. California's 26 percent enrollment in comprehensive institutions is similar to patterns in other states. In summary, then, California, along with Massachusetts, has the largest commitment to access of any state, and its emphasis on a two-year college education provides a relatively inexpensive way to achieve it.

Institutional Finances and Characteristics

California supports 135 public institutions. The state provides 60 percent more funds than average to educate a pool of students 35 percent larger than average. In addition, California's combination of heavy emphasis on two-year education and lesser emphasis on university-level education creates an educational system that on average is less expensive to operate than those in most states. The result is a system of public education that is very well supported by the state, at levels that range between 8 and 125 percent above average per student. The health-professional institution is the only exception: it receives funds per student from the state that are 10 percent less than the national average.

Largely as a result of this substantial state funding (representing 69 percent of all E&G revenues, which are then supplemented by funding from other sources), each of California's public institutional sectors except the two-year institutions operates with total E&G revenues per student (excluding grants and contracts) that are substantially above average. California's three university sectors are ranked in first and second place in terms of E&G funding. The academic/comprehensive two-year sector is funded at levels equal to the national average. At the comprehensive institutions, state and local appropriations per student are substantially above average, while tuition and private-gift revenues are significantly below. Still, comprehensive institutions in California operate with 14 percent more per student than the national average for similar institutions in other states. Tuition and fee revenues in the two-year sector (at $71 and $81 per student in the academic/comprehensive and occupational sectors) are approximately 85 percent below average and are no doubt a significant factor in the high access rates in this segment. (In California, two-year schools' tuition and fee revenues have been only "fee" income since no tuition is charged--an issue that is being actively debated currently in California.)

Above-average revenues translate into above-average expenditure patterns in most cases; public-service activities at the public universities and comprehensive state colleges are the exception. Faculty salaries are above average by 23 percent in general. The pay rates reflect the above-average salary increases in California between 1977 and 1981 that addressed the salary erosion of prior years. California ranked 10th in the nation in faculty salary gains. Notably, faculty pay rates in the community colleges are seemingly unaffected by the below-average operating budgets in that sector. In fact, the occupational schools, with a per-student operating budget of 12 percent below average, have salary rates that are 43 percent above average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 98,867,000*
Postsecondary vocational-technical education	$ 67,431,764 (42,823 units of average daily attendance)
State boards and commissions	$ 6,323,000
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 28,878,507**

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes ***

Other Comments

* Approximately $12 million included in this amount are federal funds.

** None for the state. State provides construction funds on an appropriation basis. Universities and state colleges have revenue bonds for non-state supported facilities. Community college debt service (bond interest and redemption) is $28,878,507, primarily from property tax revenues generated specifically for these projects.

*** For the University of California, non-resident tuition is considered an offset to the state's General Funds. Student fees for residents are kept by the University. At California State University, resident student fees and non-resident tuition are reimbursements to the state's General Fund. At the community colleges, funds are retained at the district level and are not accounted for at the state level.

(Indexes shown in bold are based on U.S. average = 100)

COLORADO

Recent Trends

State and local support to public institutions of higher education in Colorado rose to $243 million in FY 1981, a 28.1 percent increase from 1977. In only three states did appropriations increase less. Despite this increase, inflation of 39.9 percent created a 9.1 percent loss in the per-student purchasing power of state funding. There was almost no increase in public enrollment (.7 percent) during the four years. The nonmedical research university (University of Colorado at Boulder) sustained a 24.1 percent loss of appropriations per student in constant dollars; the four general baccalaureate institutions lost 31.7 percent.

During this period, tuition revenues increased 6.1 percent in real dollars adjusted for inflation (13th in the nation). The net effect of declines in state funding and tuition gains was a total revenue pool for public institutions that was 2.8 percent smaller in 1981 than that of 1977. There are, however, major variations among the different sectors of public higher education in Colorado. The general baccalaureate institutions suffered a loss of 20.5 percent in their overall funding levels. Overall purchasing power losses were also sustained by the University of Colorado--Boulder (9.4 percent per student); the comprehensive sector (.6 percent), and the health professional campus (University of Colorado Health Sciences Center of .2 percent). The remaining sectors, including Colorado State University (2.1 percent), the University of Northern Colorado (1.5 percent), and the two-year sectors (.8 percent for the academic two-year schools and 12.8 percent for the occupational two-year schools) had slight gains in E&G revenues per student in constant dollars.

State Financing of Higher Education

Overall funding in the state for higher education is 9 percent below average. State funds for direct institutional support for public institutions in Colorado was $84 per capita in 1981, 8 percent below the national average, ranking Colorado 28th in the nation. In quite the opposite direction, public enrollments were 28 percent above the national average (ranked 5th), so state appropriations of $2,224 per student were 29 percent below the national average of $3,099. Colorado provided $4.20 per capita in student aid, a level 11 percent above the national average of $3.80 per capita.

State Tax Base and Budget

Colorado is a tax-rich state with a potential tax capacity of $1,069 per capita, ranking it 7th in the nation and 12 percent above the national average of $949. This is the result of relatively high tax potential in general sales, individual income, corporate income, and all categories of property.

Tax effort in Colorado, however, is 10 percent below the national average ranking the state of 29th. Because the state has such a high level of economic wealth, the lower tax effort is counterbalanced. Collected tax revenues of $966 roughly equal the national average, and rank the state 18th in tax funds available to support public services.

Colorado allocates 10 percent of its tax revenues to higher education, a rate 10 percent below the national average. As a result, appropriations for general institutional support, student aid, and "other" support of $91 per capita are 9 percent below the national average.

If the total operating budget of the state (including federal revenue sharing funds and nontax revenues) is taken into account, higher education receives the highest share of the budget relative to national average, and public welfare, health and hospitals, and "other" receive a proportionately smaller share.

Higher Education Enrollments

Colorado, with an enrollment rate of 33 students per 1,000 population, is ranked 20th in the number of residents attending college anywhere and is just below the U.S. average. The nation averages 34 students enrolled per 1,000 population. Colorado achieves this near-average level of access for residents through its public institutions. These schools combined provide 12 percent more access than is typically provided by state schools. In this regard, Colorado can be considered a "public" sector state. A below-average number of residents enroll in private schools in the state, two-thirds fewer than is typical. An average number of Colorado residents go out of state for their higher education.

The public and private colleges of Colorado enroll approximately 124,000 FTE students, a large higher education enterprise relative to the state's population. The public sector is proportionately larger than the private sector as compared to the national average. Enrollment in the public sector is concentrated more heavily in the research universities than is generally true and is less oriented toward two-year institutions.

The state is ranked 5th in public enrollment load, with 37.7 FTE students per 1,000 population, 28 percent above the national average. This high level is due primarily to a high in-migration of out-of-state students, over twice the national average, a high ratio of first-time to total enrollment because of the state's emphasis on upper-division, graduate, and professional education, and greater rates of full-time study. Surprisingly, first-time enrollment of state residents is 13 percent less than is typical.

Institutional Finances and Characteristics

Educational and general revenues (excluding government contracts) per student are below average for all of the public institutions in Colorado except for the two-year occupational schools, the health-professional, and "other" specialized institutions. This is primarily due to much lower than average (nearly 60 percent lower in the case of the University of Colorado--Boulder and approximately 45 percent lower at Colorado State University, the comprehensive institutions, and the baccalaureate schools) per student state and local government appropriations. Public tuition is higher than average due in large part to nonresident fees, yet the shortcoming of low appropriations is only partially improved. The operating budgets of the research universities are 20 to 30 percent less per student than is typically found; that of the University of Northern Colorado is 11 percent below average; those at the comprehensive and baccalaureate schools are 30 to 35 percent below. Other sectors operate with average or greater funding per student. Instructional expenditures per student are about 20 percent less than average at the research universities (Colorado State University, the University of Colorado--Boulder) and the state's four comprehensive and four baccalaureate colleges. This below-average funding is reflected in faculty salaries, particularly at the upper ranks. Between 1977 and 1981 faculty salaries at the research institutions increased approximately 10 percent less than at comparable schools.

In contrast, the state's 17 independent institutions are well funded in most instances, with resulting expenditures for instruction per student and academic support per faculty member well above average. The University of Denver (university without medical) has above-average funding and expenditures, yet faculty salaries are 22 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 12,162,639
Postsecondary vocational-technical education	$ 6,072,290
State boards and commissions	$ 1,402,059
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 131,600
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ *

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

* The Colorado Commission on Higher Education allocated $6.2 million for capital outlay directly to the institutions. This amount should have been reported as appropriations by the institutions.

The University of Colorado Health Sciences Center receives indigent patient care appropriations from the state. Therefore state support for general operations for the Health Science Center is over estimated in this report.

Required transfers are made from these governing boards to Auraria Higher Education Center.

CONNECTICUT

Recent Trends

State and local appropriations to public higher education in Connecticut increased by 47.5 percent between 1977 and 1981, equal to the national average. The total FTE enrollment increased by 2.9 percent during this period, with a 3.3 percent loss at the nonmedical research university (University of Connecticut), steady enrollment at comprehensive institutions, and a 9 to 10 percent gain in enrollment at two-year colleges. Since inflation was 39.9 percent during this period, the gain in appropriations per student in constant dollars was 2.5 percent, over 8 times the national average. Public comprehensive institutions had the biggest gain, 15.8 percent.

There was an 8.8 percent loss in tuition revenues per student in constant dollars at public institutions in Connecticut.

Overall, total E&G revenues per student in constant dollars remained fairly steady for most public institutions in Connecticut. One exception was the 11 two-year academic and comprehensive colleges, where the purchasing power of E&G revenues per student fell 9.9 percent.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Connecticut was $60.50 per capita in 1981, 33 percent below the national average, ranking Connecticut 46th in the nation. However, public enrollments were also well below the national average, so state appropriations of $2,801 per student (ranked 32nd) were only 10 percent below the national average of $3,099. However, lower than average funding from other sources did not improve this situation.

Government support of student aid equaled $1.20 per capita, ranking Connecticut 27th in this category. The national average for student aid was $3.80 per capita. Connecticut also provides $9.00 per capita for operation of coordinating and state boards, fringe benefits and retirement payments, and similar noninstitutional and nonstudent aid uses.

State Tax Base and Budget

Connecticut is a tax-rich state with a potential tax capacity of $1,058.49 per capita, ranking it 9th in the nation and 11 percent above the national average of $948.73. This is the result of relatively high tax potential in individual and corporate income and residential and commercial/industrial property.

The tax effort of Connecticut is at the national average rate, with a state rank of 20. As a result, collected tax revenues of $1,056.80 are 11 percent above average, ranking the state 11th in tax funds available to support public services.

Connecticut allocates 7 percent of its tax revenues to higher education, substantially below the 11 percent national rate. As a result, appropriations for institutional support, student aid, and "other" support of $70.70 per capita are far (29 percent) below the national average.

If the total operating budget of the state (including nontax revenues such as student tuition) is taken into account, elementary/secondary education and public welfare receive shares of the budget larger than national average allocations, and higher education, highways, and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

Connecticut, with an enrollment rate of 34 students per 1,000 population, is ranked 18th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000 population. Six of Connecticut's 34 resident students per 1,000 population attend colleges out of state. Twenty residents per 1,000 population, or 59 percent, attend public institutions within the state; eight attend independent institutions in state.

The public and private colleges of Connecticut enroll 112,614 FTE students, a nearly average higher education enterprise for the state's population. The independent sector is proportionately much larger relative to the public sector than in most states. Enrollment at public institutions in the state is balanced between the four comprehensive institutions (24,121 students), eleven two-year academic colleges (17,927), and the University of Connecticut (18,314). Connecticut has seven independent comprehensive colleges, enrolling 24,681 FTE students, and Yale University (9,895).

The state is ranked 48th in public enrollment load with 21.6 students per 1,000 population, 27 percent below the national average. Only 44.9 percent of the state's high school graduates enter Connecticut's public institutions, compared to the U.S. average of 62.4 percent. Also, there is very little in-migration of out-of-state students to attend public colleges in Connecticut.

Institutional Finances and Characteristics

State and local appropriations per student are above average at the nonmedical research university (University of Connecticut). However, when total revenues are considered, the institution operates with 4 percent less per student than is typical. The state's four comprehensive institutions, on the other hand, receive only 61 percent of the national average level of appropriations per student, and the 17 two-year colleges receive 73 percent of the average level for these types of institutions. Tuition at the public institutions with the preponderance of enrollments is below average, except at the comprehensive colleges. Thus, except for the University of Connecticut, the major public institutions of the state are underfunded by about 30 percent per student.

Expenditures for instruction per student are 65 percent of the national average at the four comprehensive colleges, 54 percent of average at the two-year academic colleges, and 66 percent of average at the two-year occupational colleges. Academic support is similarly low for these institutions. Faculty salaries are near or above national averages. A larger than average student-faculty ratio (26.4 FTE students per full-time faculty member) for these three institutional types may contribute to the low instructional expenditures per student.

The independent institutions of the state are well funded. Yale University has about 50 percent more funding than the average doctoral research university with medical programs, yet Yale's tuition level is average. Full-time faculty salaries are generally above average for the independent institutions with the preponderance of enrollments.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 3,621,623
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 4,078,701
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 21,360,178 (estimate)*
Interstate contracts and reciprocity payments	$ 120,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ **
Other	$ 1,106,863

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No answer provided

Other Comments

* Includes retirement

** The State Comptroller's office, which handles debt service payments on all state general obligation bonds, does not allocate these expenditures according to project or agency. There is no accurate way to apportion these costs to higher education institutions.

DELAWARE

Recent Trends

Between 1977 and 1981, Delaware experienced gains both in state funding for higher education and in the numbers of students to support. State appropriations increased by 50.5 percent, and public enrollments grew 8.3 percent. With inflation of 39.9 percent, appropriations per student in constant dollars remained essentially steady. One exception was the 9.2 percent gain at Delaware State College, the general baccalaureate institution.

Tuition revenues in constant dollars dropped 14.2 percent at all public institutions, which, in combination with steady state funding, created a net revenue per student that shrank by 1.2 percent in real purchasing power. The four two-year occupational institutions in the state were hit hardest by this overall decline, with constant-dollar revenues shrinking 8.7 percent per student.

The four independent institutions in the state improved the real value of E&G revenues per student by 14.6 percent through a combination of increased tuition and declining enrollment.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Delaware was $97.80 per capita in 1981, 8 percent above the national average, ranking Delaware 20th in the nation. However, public enrollments in the state were substantially greater than average (ranked 4th), so state appropriations of $2,529 per student (ranked 40th) were 19 percent below the national average of $3,099. Heavy reliance on tuition resulted in total E&G revenues per student being well above average.

Government support of student financial aid amounted to only $.40 per capita, ranking Delaware 37th in this area. The national average for student aid was $3.80 per capita. The state appropriated $1.35 million for contracts with independent professional schools in other states.

State Tax Base and Budget

Delaware is a tax-rich state with a potential tax capacity of $1,057.35 per capita, ranking it 10th in the nation and 11 percent above the national average of $948.73. This is the result of relatively high tax potential in selective sales, individual and corporate income, and commercial property.

The tax effort of Delaware, however, is below the national average rate by 12 percent, giving it a state rank of 30th. As a result, collected tax revenues of $940.45 per capita position the state at the national average in tax funds available to support public services.

Delaware allocates 11 percent of its tax revenues to higher education, at the national average rate. As a result, appropriations for general institutional support, student aid, and "other" support of $100.60 per capita are also at the national average level.

If the operating and capital budget of the state (including nontax revenues such as student tuition) is taken as a whole, higher education receives the highest share of the budget relative to national averages, and elementary/secondary education, public welfare, and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

Delaware, with an enrollment rate of 31 students per 1,000 population, is ranked 30th in the number of residents attending college anywhere. Nine percent fewer students are enrolled in higher education than is typical. While twice as many residents go out of state for their college training, the below-average levels of access in the state in both sectors reduces resident access to levels below the national average.

The public and private colleges of Delaware enroll 26,284 FTE students, a large higher education enterprise relative to the state's population. The public sector is proportionately larger than the private sector as compared to the national average. About two-thirds of the 23,040 public students in the state are enrolled at the University of Delaware (nonmedical research university).

The state is ranked 4th in public enrollment load, with 38.7 FTE students per 1,000 population, 32 percent above the national average. This high level is due primarily to a very high number of out-of-state students, over five times the national average.

Institutional Finances and Characteristics

Delaware has a somewhat inconsistent pattern of support and expenditures for its public institutions. The appropriations that the University of Delaware receives are 80 percent of the national average for appropriations per student for nonmedical research universities. Appropriations to Delaware State College are 72 percent above the average appropriations for comprehensive colleges, and appropriations to the state's four two-year occupational colleges are 9 percent above the national average for that level. The University of Delaware makes up its small share of state support by setting exceptionally high tuition, 71 percent above the national average. Tuition at the occupational colleges is 51 percent below average.

At the public institutions, expenditures for instruction per student are above average. The University of Delaware has more than twice the research dollars per faculty member than average and provides public services per 1,000 capita 27 times the average level. Full-time faculty salaries at public institutions are at or above the national averages, particularly at the upper ranks.

The state's four independent institutions have small enrollments. The general baccalaureate institution is underfunded, as is the specialized college.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 282,005
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 70,700
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (contracts with independent professional schools in other states)	$ 1,354,000

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 8,489,300

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ not available
- auxiliary enterprises	$ not available
- other	$ not available

Tuition and Fees reappropriated by the state? *

Other Comments

* Tuition and fees are reappropriated for Delaware Technical and Community Colleges; tuition and fees are not reappropriated for Delaware State College and University of Delaware.

(Indexes shown in bold are based on U.S. average = 100)

DISTRICT OF COLUMBIA

Recent Trends

The District of Columbia's higher education system, in contrast to those of the states, is almost entirely independent in character, and only 12 percent of its students are in public institutions. In 1981, local support provided to the District's only public institution, a comprehensive school--the University of the District of Columbia (UDC)--amounted to $53.0 million. UDC had a remarkable four-year improvement in finances. Appropriations increased 53.1 percent and enrollment declined 27.7 percent. After inflation, total E&G revenues in constant dollars per student increased 58.9 percent from 1977 to 1981, the largest increase in the nation. UDC now has government appropriations 2.3 times the national average for comprehensive institutions. In addition, tuition increased 70.0 percent during this period.

From 1977, enrollments in the independent sector increased 9.2 percent, with 54,826 FTE students enrolled in academic year 1981. Because of large increases in tuition revenues in the independent sector, inflation-adjusted revenues per student stayed the same--with the exception of revenues at the four baccalaureate schools. The baccalaureate schools, Mount Vernon, Trinity, Washington International, and Beacon College, collectively lost 52.9 percent in real E&G revenues from 1977 to 1981. The nonmedical universities, American University and Catholic University, showed combined constant-dollar revenue improvements of 14.8 percent.

State Financing of Higher Education

Government support for the University of the District of Columbia was $83.20 per capita in 1981, 8 percent below the national average, ranking the District of Columbia 31st in the nation. However, public enrollments per 1,000 population were 61 percent below average, so the District's appropriations of $7,260 on a per-student basis (ranked 2nd) were 2.3 times the national average of $3,099.

The District provided only $.70 per capita for student financial aid, ranking 33rd in this area. The national average student aid was $3.80 per capita. The District also provided $8.00 per capita ($5 million) for service functions provided centrally, such as computer and library services.

State Tax Base and Budget

The District of Columbia is tax rich with a potential tax capacity of $1,051.24 per capita, which ranks it 11th in the nation and 10 percent above the national average of $948.73. This is the result of relatively high tax potential in general and selective sales, individual and corporate income, and residential property.

The tax effort of the District is also well above average, 131 percent of national average rates, giving it a state rank of 4th. As a result, collected tax revenues of $1,379.22 per capita are 45 percent above average, ranking the District 4th in tax funds available to support public services.

The District allocates 7 percent of its tax revenues to higher education, substantially below the 11 percent national rate. As a result, appropriations for institutional support, student aid, and "other" support of $92.70 per capita are 7 percent less than the national average.

If the operating budget of the District (including nontax revenues such as student tuition) is taken as a whole, public welfare receives a larger share of the budget relative to national average allocations, and higher education, elementary/secondary education, and highways receive a proportionately smaller share.

Higher Education Enrollments

The District of Columbia, with an enrollment rate of 25 students per 1,000 population, is ranked 50th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000 population. A very high percentage of D.C. resident students (5 per 1,000 population) attend colleges out of state. A very small percentage (10 residents per 1,000 population) attend public institutions within the District. An equal number of residents, 10 per 1,000 population, attend independent institutions within the District.

The public and independent colleges of the District of Columbia enroll 62,126 FTE students, establishing higher education as a very large enterprise relative to population (ranked 1st). The sole public institution in the District is the University of the District of Columbia, which enrolls 7,300 FTE students. The District has five independent universities, enrolling 48,311 FTE students. The independent sector is proportionately much larger relative to the public sector than in most states.

The state is ranked 51st in public enrollment load, with 11.5 FTE students per 1,000 population, 61 percent below the national average. This low level is due primarily to the low in-migration of out-of-state students to the public university of the District, a low ratio of first-time enrollment to total enrollment because of the District's emphasis on lower-division work, and a low conversion factor, which indicates that many students attend part-time.

Institutional Finances and Characteristics

The University of the District of Columbia receives appropriations per student 2.5 times the national average for comprehensive colleges. Although tuition charged at the university is 58 percent below average, other above-average revenues make up for this, providing total educational and general revenues (excluding government contracts) per student two times the national index.

As a result of this exceptional funding, instruction and academic-support expenditures are above average, as is public service. Research expenditures per faculty member are only one-fourth the national average for this type of institution.

The District has ten major independent institutions. The three universities with medical programs--George Washington University, Georgetown University, and Howard University--have above-average funding and have above-average expenditures for instruction and academic support. American University and Catholic University, the nonmedical universities, have average funding and average expenditures, slightly below average. Gallaudet College is funded 4.9 times the average comprehensive institution because of its specialized educational mission for the deaf. The District's four baccalaureate colleges are funded about average. Salaries for full-time faculty at the independent institutions are at or near the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 394,661
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 0
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 5,006,211
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 7,673,800
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 571,295
- other	$ 0
Tuition and Fees reappropriated by the state? ^	

Other Comments

^ Prior to 1981 tuition was treated as revenue to the General Fund. Since 1981, tuition revenue is treated as a credit to the University fund and reported as tuition.

(Indexes shown in bold are based on U.S. average = 100)

FLORIDA

Recent Trends

Florida's public sector lost substantial ground in its overall revenue base between 1977 and 1981. Only Montana fared worse in its constant dollar per student revenue base. Increases of almost 60 percent in state and local funds for higher education in Florida were unable to accommodate the 41 percent increase in enrollments and the loss in the value of per student tuition revenues. The net result was a 21 percent real-dollar decline in revenues per student. These losses were concentrated largely in the two-year sector where the academic institutions lost 33 percent of their purchasing power per student in real dollar terms and the occupational sector had a nearly two-thirds decline. Losses were also experienced by the medical research university (University of Florida), whose inflation-adjusted funding fell by nearly 5 percent. The other public sectors had real dollar improvements ranging from nearly 2 to 8 percent per student.

Florida's independent institutions continued to see funding support eroded by inflation and enrollment growth. Between 1977 and 1981, revenues per student adjusted for inflation dropped 4.4 percent. Only the small two-year academic schools and the professional/specialized schools had real-dollar gains.

State Financing of Higher Education

Florida ranks 39th in the nation in per-capita support of higher education, spending $77 per person, a level 23 percent below average. As in most states, almost all state funding is directed to the public sector; in Florida, 98 percent of all support goes to aid either students or institutions in the public sector. Florida does, however, provide both student aid and institutional appropriations to the independent sector but at below-average rates. This is not surprising given that Florida's enrollment in the independent sector is smaller than average.

State Tax Base and Budget

Florida has average resources to support public functions, ranking 23rd nationally in tax capacity. The state's tax capacity is due to high levels of general and selective sales, residential property, and death and gift transfers, which together counterbalance the low capacity in other areas. However, except for selective sales, Florida has below-average tax rates in each of those categories. This low tax effort results in tax revenues one-quarter below typical levels, and it largely explains why, despite average tax capacity, Florida's tax revenues are so low.

That also explains why Florida's support to higher education ranks so low nationally--although the share of tax revenues devoted to higher education is average, the small size of the tax pool creates a below-average level of support.

Census Bureau data indicate that Florida's budget strongly emphasizes expenditures for health and hospitals and public services, and that the share of the state budget allocated to them increased from 1977 to 1981. Shares for higher education, elementary/secondary education, and highways are exactly average, while welfare receives approximately one-half the typical share of the budget. Since the size of the state budget in Florida is smaller than usual, functions receiving lesser shares are doubly impacted.

Higher Education Enrollments

Florida ranks 34th in the nation in terms of the number of residents who enroll in higher education. In Florida, 12 percent fewer residents attend postsecondary education institutions. Although enrollment in the public sector in state equals national rates, attendance by residents at independent institutions within the state and at out-of-state institutions is half the average level.

The number of entering high school graduates in Florida is 27 percent below the U.S. average; the first-time entrance rate for residents is 10 percent below average, and this creates a first-time enrollment level of residents that is 34 percent below typical levels. However, strong enrollment by nonresidents, above average retention of students, and greater rates of full-time study in the system counterbalance these factors. As a result, enrollment in the public sector slightly exceeds national levels. Florida enrolls 30 FTE students per 1,000 population compared to 29 FTE per 1,000 in typical states.

There is an unusually large concentration of students in the public community colleges in Florida, representing 66 percent of enrollments; in contrast, two-year students make up 38 percent of the total in most other systems. As a result, enrollments in both the university sectors and in the comprehensive institutions are smaller than usual.

Institutional Finances and Characteristics

Although Florida's support of higher education is comparatively low, the state's system, with its major emphasis on two-year institutions, is relatively less expensive to support. In addition, the system's focus on graduate studies is lower than average, and schools are generally larger than average. This further reduces the financial load on the state and creates a system of higher education that is comparatively less expensive to operate. State appropriations per student are 21 percent below national norms generally, but in every sector except the two-year they are above national levels and in many cases significantly so. At the University of Florida, the public research university in the state (including a medical program), state funding is 41 percent above the average for similar institutions. While below-average tuition revenues reduce this margin, the University of Florida still operates with total revenues per student (excluding government grants and contracts) that are 14 percent above average. The University of South Florida receives about 3 percent above average in state funds per student. However, other revenues at this institution are below national norms, and its operating base is 14 percent below average. Florida State University is relatively well funded by the state, receiving 25 percent more funds than average. However, despite other revenues that are below average, its total base matches the national patterns of similar schools. The public comprehensive institutions receive 31 percent more in state funding than average; when other revenues are factored in, the sector functions with 21 percent more funding than average.

The two-year comprehensive/academic institutions, the largest single sector in the state, receive state appropriations that are substantially below the average for such schools (by 36 percent). Some of this shortfall is ameliorated by revenues from other sources. However, the sector as a whole operates with per-student funds that are substantially below average (by 30 percent). In contrast, the independent institutions are funded at levels 10 to 50 percent below average, except for the two-year schools.

Faculty salaries in Florida are 8 to 10 percent below average in the public and independent sectors. However, this overall profile varies by sector. The university and comprehensive institutions pay at rates close to the average. In the two-year sector, however, average salaries are 13 to 20 percent below those paid at similar institutions. Between 1977 and 1981, salaries at the universities and comprehensive institutions markedly improved, at rates generally 20 percent better than average. In sharp contrast, salaries in the large comprehensive two-year sector increased about 40 percent less than salaries at other community colleges in the nation.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 14,170,850
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 7,725,275
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 6,280,275
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 5,608,908
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

GEORGIA

Recent Trends

Between 1977 and 1981, state appropriations in Georgia increased 61 percent. Because enrollments fell almost 2 percent, the net effect of this increase, even after adjustment for inflation, was a 17 percent improvement in state support of public higher education. Only eight other states fared better in this regard than Georgia. Given that the national average was a .3 percent gain in constant-dollar state support per student, Georgia's gain of 17 percent is even more impressive.

Increases in tuition revenues did not move in step with inflation (slipping 5.3 percent), thereby eroding some of the gains in state support. Nevertheless, the operating base for the public sector made real-dollar improvements of 12.1 percent. All public institutional sectors shared in these funding gains.

State Financing of Higher Education

Although Georgia channels a relatively large share of state tax revenues to higher education, the small size of the total state budget causes funding of higher education to be 10 percent below average. Georgia provides $90 per capita in support of higher education, ranking 32nd in the nation. Therefore, despite recent funding increases, Georgia's relative position among the states has not changed.

The bulk of state funding goes to the public sector. Eighty percent of state funds for higher education are allocated to institutional support, 1 percent to student aid, and a relatively large share, 19 percent, for indirect support (primarily for vocational education and separately funded retirement benefits). As a result of the exclusion of the vocational sector from the remaining analysis, enrollments and funding are underestimated in the ensuing sections of this report on Georgia.

State Tax Base and Budget

Georgia is a state with very low inherent tax capacity, and the problem of raising revenues is exacerbated by a below-average tax effort. In fact, Georgia's capacity to tax is below average in all categories. Further, the state underutilizes its capacity in almost every category; exceptions are general and selective sales and individual income. As a consequence, state tax revenues are approximately one-fifth lower than average. Only 13 other states operate with less revenue per capita.

Georgia provides nearly average budget shares to elementary/secondary education and highways, but particularly below average shares to higher education, public welfare, and public services. By contrast, health and hospitals are heavily supported, with a share 78 percent above average. The higher education share of the budget slipped from 1977 to 1981, falling from 9 percent to 8 percent of the state's budget.

Higher Education Enrollments

Georgia residents have the lowest rates of access in the country. Only 23 per 1,000 population enroll in higher education compared with a U.S. average of 34 per 1,000. In other words, residents of this state are one-third less likely to pursue higher education. Since enrollments in the vocational-technical sector are not included in these figures, this low access rate is inconclusive. Still, Georgians' educational proclivities appear substantially less than those of other states' residents. The low access rates are evident in every enrollment category, both inside and outside the state. In fact, access rates decreased from 1979 to 1981, from 24 per 1,000 to 23 per 1,000. The 1.7 percent loss in enrollments at Georgia's public institutions contrasts sharply with the 4.9 percent gain experienced nationally between 1977 and 1981.

Enrollments are heavily concentrated within the three universities in the state (including Georgia Tech), which account for over 40 percent of the total. This is an unusually large share and is a more expensive type of education to support. Associated with this heavy university emphasis, the state's share of graduate enrollments is also 50 percent larger than usual. These two circumstances combine to create a further financial load on the state.

Institutional Finances and Characteristics

Because per-capita enrollment is below average in the public sector, Georgia's lower level of state funding overall is counterbalanced to some degree. Per-student revenues in the public sector are 7 percent above average and state revenues per student are 13 percent above average. However, state and total funding per student varies considerably among the different sectors.

The University of Georgia represents the only large public sector that is above average in both state funding and total E&G revenues, on a per-student basis. Two smaller sectors, the public baccalaureates and the Medical College of Georgia, also are funded by the state and, in total, at or above average rates. However, every other public sector functions with funds that are between 6 and 47 percent below average.

Faculty salaries in Georgia are generally below average for all ranks, though there has been an overall gain since 1979. There are substantial variations among the different types of institutions. For instance, the universities in general are funded at or above the average for upper-rank faculty. At all other types of public institutions, salaries are generally 12 to 19 percent below average for the same faculty rank. These conditions exist despite recent salary increases at these schools, which generally exceeded national patterns by nearly 50 percent.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,325,165
Postsecondary vocational-technical education	$ 52,331,392 (24,780 FTE)^a
State boards and commissions	$ 3,219,060
Retirement benefits (including social security)	$ 39,728,795
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 438,250
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 18,081,663

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 2,776,008
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

^a Assumes that student would be present 6 hours/day for 208 days/year.

HAWAII

Recent Trends

Appropriations to public institutions in Hawaii increased by 57.8 percent between 1977 and 1981, exceeding national rates of growth by 22 percent. Furthermore, with a 5.5 percent drop in enrollments, the value of these state monies spurted upward by 19.4 percent per student, even after adjustment for inflation. This real-dollar increase in state funding was the sixth best in the nation and, despite a decline of 18.8 percent in the inflation-adjusted value of tuition revenues, produced an overall increase in E&G funding per student of 15.5 percent. Every public sector shared in these funding gains.

The greatest gains occurred at the University of Hawaii's four two-year campuses, which emphasize academic/comprehensive curriculum. At these campuses, adjusted revenues per student increased by 22.8 percent, primarily because of the increase in state funding and an 11.4 percent drop in the number of students to educate. The improvement at the medical research university (University of Hawaii at Manoa) was next best, with a 15.7 surge in per-student purchasing power. The two-year occupational schools followed with a 13.0 percent gain. The two baccalaureate campuses had the smallest net improvement, 7.7 percent in constant-dollar revenues per student (excluding government grants and contracts). In sum, the period 1977 to 1981 was one of economic progress for public institutions in Hawaii, fueled by state support more than sufficient to compensate for adjusted-dollar losses in tuition.

Although the gains were far smaller, funding for the independent sector also increased from 1977 to 1981, resulting in an 8.3 percent real-dollar per-student increase in revenues. However, the gains by sector were uneven, as the baccalaureate schools gained one-third in their operating budgets and the budgets of specialized schools dropped 43 percent.

State Financing of Higher Education

Hawaiians support higher education at a rate 41 percent above the national average. State and local government provides $142 per capita to public colleges and universities, placing Hawaii 4th in the nation in its support of higher education (following Alaska, Wyoming, and California). There are no state-supported student aid programs; all funds are funneled either directly to the public institutions, or through separate arrangements which cover centrally provided services, the system's administration, or interstate contracts and reciprocity payments.

State Tax Base and Budget

Hawaii has an above-average tax capacity, ranking 17th nationally. In addition, the rate of taxation in the state is 24 percent above average. Only four other states are more willing to tax: New York, Alaska, Massachusetts, and the District of Columbia. As a result, Hawaii raises 32 percent more tax revenues per capita than average, raising $1,258 per person in 1981.

The state's tax structure emphasizes sales and income tax categories, and more than 80 percent of all tax revenues are collected in these particular areas. Property taxes are a fairly minor source of Hawaii's tax revenues. Hawaii ranks 5th in the nation in potential in this category, but only 46th in efforts to utilize this source.

Census data (which include both tax revenues and federal revenue-sharing funds) established a budget of $2,181 per capita for the state, a level 22 percent above average. Although the largest single share of taxes, 18 percent, is budgeted for elementary/secondary education, this share is more than 30 percent below average. Public welfare is next in size, garnering 13 percent of state expenditures, followed by public services at 12 percent and higher education at 11 percent--all shares that are average or above average. Highways and health and hospitals receive a smaller than usual slice of the state budget, 7 and 6 percent, respectively--shares that are 22 percent and 33 percent smaller than is typical. Still, because there is a larger than average state pie for public programs, the actual dollars involved are more than might be expected. Therefore, higher education is doubly benefited in its receipt of an above-average portion of the budget. In addition, census figures indicate that between 1977 and 1981 higher education's portion of the budget expanded from 10 percent to 11 percent.

Higher Education Enrollments

Residents of Hawaii participate in higher education at the national average, with 34 FTE of each 1,000 Hawaiians enrolled in college. The majority of these students attend public in-state institutions, although large numbers of residents also go out of state for higher education. Only a small fraction participates in the state's independent institutions. Hawaii is close to the top third of states in college participation by state residents. However, access in Hawaii slipped considerably from 1979 to 1981--in 1979, Hawaii ranked 6th among the states, but in 1981, it had fallen to 19th because of the 5.5 percent drop in public enrollments.

Hawaii's higher education system is almost entirely public (ranked 7th in the nation), and 93 percent of its students are in public institutions. Half of the public students are enrolled at the Manoa campus of the University of Hawaii. The state's other large sector is made up of its two-year institutions, which enroll 40 percent of the students. Only 9 percent of students are enrolled in public baccalaureate institutions, and there are no comprehensive institutions in Hawaii. This concentration of students in the university sector creates a system of higher education that is, on average, more expensive to support. However, the graduate emphasis of the university is less than typical, with the result that, overall, graduate education in the state is only slightly greater than average.

Institutional Finances and Characteristics

Hawaii is generous in its support of higher education, and per-student appropriations are 22 percent above average. However, because revenues from tuition (in particular) and other sources are substantially below average, the net result is that per-student support in the public sector equals the national average. Despite the overall average, funding per student in each sector is below levels at comparable institutions. The two-year occupational schools are most severely impacted, functioning with revenues that are one-third below average. The Manoa campus also is strongly affected; overall E&G revenues are 16 percent below average. The public baccalaureate schools have per-student revenues that are 6 percent below average, and those of the comprehensive/academic two-year schools are 4 percent below average.

Since state funding is substantial and residents are already highly taxed, the major source of additional revenue would appear to be tuition. Tuition revenues in Hawaii are approximately half those collected elsewhere. And in the two-year sector, such revenues are 71 to 78 percent below average. Although low tuition rates encourage access, their continuation poses important policy decisions for the state and its institutions given the probable impact of relatively low operating revenues.

The effect of below-average funding in Hawaii's public system is less apparent in faculty salaries, which are 3 percent above average. However, from 1977 to 1981, when faculty salaries nationally were increasing by 33 percent, the gain in Hawaii was 20 percent. Salaries at the independent institutions also grew at rates substantially below average (22 percent in Hawaii, compared to a national average of 31 percent).

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 5,888,678
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 846,913
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 2,387,314
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

IDAHO

Recent Trends

The funding of Idaho's public institutions dropped slightly in terms of real dollars between 1977 and 1981. A 35.1 percent increase in state appropriations was not enough to accommodate the 7.1 percent increase in students and the 39.9 percent inflation of the period. As a result, the real value of state dollars per student dropped 9.8 percent. Tuition revenues were increased much faster than inflation (20.4 percent, 6th in the nation), with the result that total E&G revenues per public student, when adjusted for inflation, were reduced by only 3.2 percent. All sectors shared in this loss except the comprehensives. Lewis and Clark State College lost 22.6 percent in real E&G revenues per student mainly because of a 41.1 percent gain in enrollment.

Funding improvements were substantial in the private sector. E&G real revenues increased by 23.7 percent at the two-year academic school (Rick College), which enrolls 75 percent of the private students in Idaho.

State Financing of Higher Education

State and local government direct general support for public institutions of higher education in Idaho was $98.60 per capita in 1981, 9 percent above the national average, ranking the state 18th in the nation. Public enrollments per capita were also near the national average, so the state's appropriations on a per-student basis of $3,515 (ranked 10th) were 13 percent above the national average of $3,099.

The state provides only $.30 per capita in student financial aid, compared to the national average of $3.80. Two dollars per capita ($1.2 million) is provided to support the operations of the state's area vocational-technical institutions (297 FTE students), state boards and commissions, and fringe benefits. Overall state funding for higher education was just slightly above the U.S. average.

State Tax Base and Budget

Idaho is below average in potential tax wealth, with a tax capacity of $830.11 per capita. It ranks 39th in the nation in this category, and its capacity is 13 percent below the national average of $948.73. This is the result of relatively low tax potential in selective sales, individual and corporate income, and residential and commercial property.

The tax effort of Idaho is equally low, 12 percent below national average rates, with a state rank of 32nd. As a result, collected tax revenues of $733.04 per capita are 23 percent below average, ranking Idaho 41st in tax funds available to support public services.

Idaho allocates 14 percent of its tax revenues to higher education, substantially above the 11 percent national rate. As a result, even with low collected tax revenues, the high allocation rate provides appropriations for institutional support, student aid, and "other" support of $100.90 per capita, which is slightly above the national average.

If the total operating budget of Idaho (including nontax revenues) is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and public welfare receives a relatively smaller share.

Higher Education Enrollments

Idaho, with an enrollment rate of 31 students per 1,000 population, is ranked 28th in the number of residents attending college anywhere. Nine percent fewer residents are enrolled in higher education than is typical, primarily because of below-average enrollments in both sectors. While 50 percent more residents go out of state for college, this is not sufficient to compensate for lower in-state enrollment.

The public and independent institutions of Idaho enroll 33,938 FTE students, an average-size higher education enterprise relative to the state's population. Enrollment in the public sector compared to the private sector, 78 percent versus 22 percent, is about equal to the national average balance. About half of the 26,574 FTE public enrollment is at the state's two comprehensive institutions; 7,527 FTE students are enrolled at the University of Idaho (nonmedical research university).

The state is ranked 28th in public enrollment load, with 28.1 FTE students per 1,000 population, 4 percent below the national average. Idaho's rate of 44.3 percent of high school graduates entering public colleges is low compared to the national average of 62.4 percent entering public in-state institutions. However, this is partially counterbalanced by a high in-migration of nonresidents

Institutional Finances and Characteristics

Public institutions in Idaho receive state appropriations well above average in every sector except at the two-year occupational schools. Except for the single two-year academic college, public tuition is substantially below average. The University of Idaho has total educational and general revenues (excluding government contracts) per student that are 26 percent above the national average for research universities without medical programs. The two comprehensive colleges have revenues of 2 percent above average.

The three institutions that enroll over three-fourths of Idaho's public students--the University of Idaho, Boise State University, and Idaho State University--have instructional and academic-support expenditures well above average. Faculty salaries are 11 percent below average. Research per faculty member at the University of Idaho is 53 percent above average. All three institutions have extensive public-service programs relative to the state's population.

The state's three independent colleges charge below-average tuition but obtain above-average gifts and grants and other revenues, to secure total educational and general revenues (excluding government contracts) per student that are near the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 298,400
Postsecondary vocational-technical education	$ 1,190,200 (297 FTE)
State boards and commissions	$ 347,000
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 359,200
Interstate contracts and reciprocity payments	$ a
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

[a] Funding for WICHE Student Exchange Program, the University of Utah Medical School contract, the Creighton Dental School program, and the Family Practice Residency Program is appropriated directly to the State Board of Education and, therefore, is not included in HEGIS.

(Indexes shown in bold are based on U.S. average = 100)

ILLINOIS

Recent Trends

In Illinois, state and local appropriations to higher education increased at slower rates between 1977 and 1981 than was typical. The $972 million appropriation for public institutions in 1981 represented a 40.2 percent increase from 1977, but it was still 15 percent lower than the 47.2 percent jump that occurred nationally. Compounding the situation, during this same period enrollments in the Illinois public sector generally increased by 3 percent. In the face of inflation and enrollment gains, the constant-dollar per-student value of state monies slipped 2.7 percent.

Illinois institutions varied in the extent to which their state funding increased or decreased. Three sectors, the comprehensives, the medical research university (University of Illinois) and the nonmedical universities, experienced inflation-adjusted improvements in state support per student (13.6, 7.4 and 1.4 percent, respectively). The two-year sectors were particularly hard hit, and real-dollar losses in state and local appropriations were 17 to 19 percent.

Constant-dollar tuition revenues per student also slipped overall, by 1 percent. Because income from other revenue sources increased, the net impact on revenues was static between 1977 and 1981. However, individual sectors saw substantial changes.

Fueled by real-dollar gains in tuition revenues, the independent sector in Illinois gained 8.1 percent in its total E&G revenues per student, even after adjustment for inflation. Only the two-year occupational sector suffered any major loss in the total purchasing power of its funds. Although the loss for that sector was substantial, 29 percent, other private sectors gained as much as 14 percent.

State Financing of Higher Education

In 1979, Illinois spent $98 per capita to finance higher education. This level of support was 2 percent below average and was due to the relatively low share of tax revenues (10 percent below average) being channeled to higher education.

The state is diverse in its methods of supporting higher education, funding public and private institutions directly and providing student aid in both sectors. The state is above average in the extent to which it supports independent students and institutions, as well as in the amount of student aid it provides students attending public institutions in the state. By contrast, state appropriations in the form of public general institutional support are below average by 6 percent.

Illinois spends 8 percent of its higher education budget for student aid, a share that is more than twice the national average (index 200). The state also funnels 6 percent of its funds to the independent sector, again a share that is twice the average. As a result, the share accorded to public institutions is somewhat reduced. 87 percent of all higher education dollars, which is 6

State Tax Base and Budget

Illinois ranks 15th in the nation in its inherent tax wealth, and it has a tax capacity that is 7 percent above average. Tax rates increased in Illinois from 1977 to 1981, bringing the state tax rates to 2 percent above average. Above-average tax capacity and tax rates in Illinois placed the state 12th nationally in tax revenues collected per capita. Collecting $1,046 per person in 1981, the state functioned with 10 percent more in tax revenues than average.

The strong tax capacity of Illinois is tied primarily to above-average individual and corporate income and property. The tax structure does not utilize fully its capacity to tax income (except corporate income) and relies instead on sales and property taxes to raise public monies.

The state's use of these funds shows an above-average emphasis on public services and public welfare (indexed at 136 and 108, respectively). On the other hand, funding is 11 percent below average for higher education, 33 percent below average for health and hospitals, and 4 percent below average for elementary/secondary education. From 1977 to 1981, higher education's share of the state's budget declined from 9 to 8 percent.

Higher Education Enrollments

Illinois residents rank 10th in the nation in their rates of access to higher education, primarily because of above-average enrollment in the state's private colleges and universities. Residents of the state are 6 percent more likely to enroll in higher education than is average. Access in Illinois improved from 1979 to 1981.

Total enrollment in the state's public institutions is about 7 percent below average. Approximately 27 FTE students per 1,000 capita are in public institutions, compared with the U.S. average of 29 per 1,000. The initial rate of attendance by residents is 27 percent above average, but a low retention rate, a tendency toward more part-time study, and very low in-migration from other states reduces this initially large enrollment level. On the other hand, the independent sector in Illinois, because of the extensive enrollment of state residents, is 10 percent larger than usual.

The Illinois system of public higher education places a much greater emphasis on two-year education than do most state systems. Almost half of the public students attend these two-year schools, whereas the U.S. average is 38 percent. An average proportion attends universities, a smaller proportion attends comprehensive institutions, and there are no public baccalaureate institutions in the state. The private sector in Illinois is fairly similar to typical patterns in its mix of institutions and enrollments.

Institutional Finances and Characteristics

Illinois provides 6 percent less than average per capita level of state appropriations to its public institutions. These institutions as a group enroll 7 percent fewer students than is generally the case. As a result, state support at $3,109 per student is right at the U.S. average. However, state funding varies considerably by sector. In 1981, the Urbana campus of the University of Illinois received state funding at 21 percent above average, a marked improvement from 1979 when state funding was 12 percent above average. Southern Illinois--Carbondale is funded at 7 percent above average, and seven comprehensive institutions receive 26 percent more than the average. Illinois State, Northern Illinois, and Chicago Circle combined receive state funds per student that are 1 percent above average. By contrast, the 45 academic/comprehensive two-year schools, the five occupational two-year schools, and the public health professional institution are the lowest in relative funding, receiving state dollars at rates 15 to 25 percent below average. Higher tuition revenues in the two-year sectors help to offset this lower level of state funding. Still, the largest sector in the state, the two-year academic sector, operates with a total level of E&G funds that is 9 percent below average. In general, tuition revenues in Illinois are 11 percent below average. At the University of Illinois--Urbana, they are 36 percent lower than average. As a result, it has total E&G funding that is only 5 percent above the U.S. average, despite substantial state funding. Similarly, Southern Illinois University--Carbondale has total funding 3 percent above average. The comprehensive sector, by contrast, obtains total revenues that are 18 percent above average per student. The nonmedical universities, Illinois State, Northern Illinois University, and Chicago State University, combined operate with total revenues that are 11 percent below average. The health professional institutions operate with funds 18 percent below average. In general, the public institutions in Illinois receive an above-average share of funds from state and local appropriations and a lesser share from tuition. This creates a mixed funding profile by institutional sector.

In the independent sector, tuition revenues are 9 percent above average overall; however, there are considerable differences in funding within this sector.

Faculty salaries in Illinois are above average at independent institutions and close to the average at public institutions. However, increases in recent years show that these institutions have lost ground generally. In the public sector, faculty salaries grew 13 percent more slowly than average between 1977 and 1981, while in the independent sector the rate of salary increase was 7 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 90,186,300
Postsecondary vocational-technical education	$ Not available (26,887 FTE)
State boards and commissions	$ 5,351,600
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 33,049,600
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 1,192,400
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 26,630,200*
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 1,592,600
- auxiliary enterprises	$ 0
- other	$ 33,508,300**

Tuition and Fees reappropriated by the state? Yes

Other Comments

* Estimate of state funds. In addition, local bond revenues are provided to community colleges; these data are not readily available.

** Illinois Building Authority Rental payment

INDIANA

Recent Trends

Although increases in state appropriations between 1977 and 1981 were above average, the numbers of students attending Indiana's public institutions during this period grew at twice the U.S. average. Thus, overall, Indiana's public higher education sector experienced a real-dollar loss in state funding of 2.7 percent per student. The real-dollar value of tuition revenues in Indiana's public sector improved slightly, by .5 percent. Overall, total E&G revenues per student were unchanged after adjustment for inflation. The two largest sectors, the research universities (Indiana University at Bloomington and the main campus, Purdue) and the six comprehensive institutions experienced small improvements in their real-dollar funding per student (3.4 percent and 5.3 percent, respectively). At Ball State, the purchasing power of revenues per student slipped 3.5 percent between 1977 and 1981. In the two-year comprehensive/academic sector, adjusted funding fell 6.5 percent. The general baccalaureate and two-year occupational schools, by contrast, had significant real-dollar funding improvements--10.8 percent and 58.4 percent, respectively.

State Financing of Higher Education

Indiana spends $85 per capita on higher education, almost 15 percent below average. However, the number of students in the public sector is also below average by 11 percent. Since higher education receives an above-average share of tax funds, the below-average level of state funding is a consequence of the reduced size of the state's budget.

The vast majority of the state's higher education funds are given to the public sector, as is the case in most other states. Indiana operates a large state student aid program, 25 percent better funded than average. Public institutional support accounts for 89 percent of higher education's budget, which is average; actual funding, however is nearly 20 percent below average.

State Tax Base and Budget

Indiana is both inherently less wealthy than average (by 8 percent, ranking it 35th among the states) and unusually reluctant to tax the economic base it has. Tax rates in the state are 16 percent lower than average, and only 11 other states have lower rates. As a consequence, the amount of tax funds collected in 1981 was 23 percent below average. Low income tax rates and a below-average utilization of selective sales tax capacity account in major part for the low level of taxes collected in Indiana.

According to Census Bureau figures, higher education received 13 percent of the total state budget in 1981, a similar share to that received in 1977 and 44 percent above average. Elementary/secondary education and health and hospitals also received above-average funding. Highways and public services received typical budget shares, whereas public welfare and other functions garnered smaller budget shares than average.

Higher Education Enrollments

Residents of Indiana are 21 percent less likely to enroll in higher education than are residents of other states. This applies in every category of enrollment--public in-state, private in-state, and out of state. Residents of only seven other states show a lesser disposition to higher education. In total, 27 residents per 1,000 attend colleges and universities anywhere, in contrast to national access rates of 34 per 1,000. While these rates of access are comparatively low, they represent an 8 percent improvement from 1979. In addition, above-average numbers of nonresidents enroll in both the public and private sectors in Indiana, thus raising total enrollment rates to some degree.

The structure of higher education in Indiana is unusual, characterized by a heavy emphasis on university education. In Indiana, 80 percent of all public students are enrolled in universities or comprehensive institutions (compared to the national average of only 56 percent). Reflective of this emphasis is the fact that 12 percent of all public-sector students in Indiana are studying at the graduate level (compared to 8 percent nationally). No state has a larger proportion of graduate enrollments, and only four other states enroll as many students at this level.

Indiana's system of public education, given its emphasis on university and graduate-level study, is therefore one of the most expensive public systems to operate. The state's private sector, in contrast, places much less emphasis on university-level study and greater focus on comprehensive and baccalaureate education than is typical.

Institutional Finances and Characteristics

On the surface, Indiana's support per student is just below the national average, since both state funding and enrollments are below average. However, funding per student among different categories of public institutions varies considerably. For instance, Indiana public research universities receive 32 percent less per student than average, and the two-year occupational schools are below national averages by 51 percent. State funding for remaining sectors varies, with the comprehensive sector receiving 18 percent more than average and the remaining sectors receiving below-average amounts, to the following degrees: 4 percent less per student for Ball State, 21 percent less for the three public baccalaureate schools, and 10 percent less for the comprehensive/academic two-year schools.

Funding to public institutions from other sources is striking in Indiana. Tuition revenues are 40 percent above average, gifts 42 percent above average, and other sources 25 percent above average. As a result, revenues are improved in every sector, with one exception, Ball State University.

Still, only two sectors (the comprehensive institutions and the academic/comprehensive two-year schools) operate with funds equal to or above the average for comparable institutions. The largest sector (with Purdue and Indiana University--Bloomington) functions with 23 percent less per student than average for similar institutions.

Faculty salaries in Indiana are below average in both the public and independent sectors, by 3 and 8 percent, respectively. Below-average rates of salary increase in the public sector from 1977 to 1981 contributed to these low levels. A review of salaries by sector, however, is somewhat surprising. The research universities, despite operating with funds that are 23 percent below average, pay their faculty in all three major ranks at rates equal to or close to national averages. By contrast, faculty in the same ranks at the other universities and comprehensive institutions are paid salaries approximately 5 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 21,700,000
Postsecondary vocational-technical education	$ 625,397
State boards and commissions	$ 1,986,147
Retirement benefits (including social security)	$ 26,623,000
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ Not available
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No answer provided

IOWA

Recent Trends

The value of state funding dropped substantially in Iowa between 1977 and 1981. State appropriations to public institutions of approximately $315 million in 1981 represented a 39 percent increase over 1977 levels, but this gain was still 17 percent below average. Further, enrollment grew almost three times the national rate, expanding by 13.3 percent to nearly 83,000 FTE students. As a result, state funding per student, adjusted for inflation, shrank by 12.3 percent compared to four years earlier. Tuition revenues, after adjustment for inflation, also declined in the public sector (-3.4 percent). These losses meant that the real-dollar base of revenues was reduced by 9.1 percent per student at public institutions in Iowa. Only five other states (Montana, Florida, Nevada, Wisconsin, and Rhode Island) suffered greater losses in the per-student purchasing power of their public sector.

All sectors of public institutions were affected by these funding losses, but especially the comprehensive institutions, where funding dropped 11.5 percent. The next-greatest losses were in the two-year sector, where total funding per student fell 10.6 percent at the occupational schools and 9.8 percent at the academic/comprehensive institutions. The largest sector, the research universities (including the University of Iowa and Iowa State), suffered the smallest loss but still found its inflation-adjusted funding diminished by 6.6 percent per student.

State Financing of Higher Education

Iowa spent $114 per capita to support higher education in 1981, a level 14 percent above average. This high rate of support is the result of a larger than average share of the state's budget going to higher education. In acknowledgment of the high percentage of enrollments in independent institutions, Iowa provides large amounts of state student aid to students in private colleges. The state provides an average budget share in public institutional support, but given the larger size of the state pie, institutional support is 19 percent above average. Iowa also provides funding for a state board.

State Tax Base and Budget

In tax capacity, Iowa is 5 percent above average, but its tax rates are 5 percent below average. As a consequence, the state budget is average. Iowa's above-average capacity to raise taxes is based on high general levels of sales, licenses, farm property, and death and gift transfers. Its tax structure, however, does not capitalize heavily on its broad capacity but rather on individual income taxes, which are the primary source of state revenues.

Iowa allocates unusually large shares of its state budget both to highways and to higher education, 56 and 44 percent larger than average, respectively. Elementary/secondary education also receives a slightly greater than average budget share. Public services and public welfare, by contrast, receive less of the state budget than is generally the case (by 27 percent and 8 percent, respectively), though each of these functions received more of the state budget in 1981 than in 1977. Higher education's portion of state expenditures also improved from 1977, shifting from 12 to 13 percent of the budget.

Higher Education Enrollments

Although higher education is a major budget priority in the state, residents enroll at average rates. An above-average number of Iowans enroll in private in-state institutions, an average number go to out-of-state institutions, and a below-average number attend the state's public sector. Thirty-four of every 1,000 persons in the state are enrolled in higher education, a figure which matches the national rate.

The size of the public sector (relative to the state population) is slightly below average despite above-average first-time enrollment by residents, above-average enrollment by nonresidents, and a much greater than average number of students enrolled in full-time study. Iowa retention rates, 25 percent below average, are the primary reason for the reduced public-sector enrollment. The independent sector, by contrast, is 35 percent larger than usual, with above-average numbers of both residents and nonresidents.

Iowa operates a relatively expensive system of public higher education. Fifty-four percent of its students are enrolled in research universities, compared to 21 percent of students nationally. Reflecting this structure, Iowa is among the top five states in graduate enrollment, with 12 percent of its statewide enrollments at the graduate level. This contributes further to the expense of its system. Thirty-five percent of the students attend two-year institutions, and the remaining 12 percent are in a comprehensive institution (University of Northern Iowa).

The independent sector is largely baccalaureate in character, with 70 percent of all independent students in one of 26 such colleges in Iowa. The remaining private students are in comprehensive, two-year, or professional institutions.

Institutional Finances and Characteristics

With above-average state funding to higher education and a below-average number of students, the level of per-student state support is 22 percent above average in Iowa's public system. Every type of public institution shares in this profile, with per-student funding 1 to 13 percent above average. Revenues from other sources also are above average overall in the public sector, although there are variations by segment. The largest sector, the research universities, operates with 8 percent fewer funds than average, while all other segments receive funding between 1 and 41 percent above average.

In the private sector, funding is mixed. The largest sector, the baccalaureate institutions, is funded at levels 5 percent below the average. The comprehensive sector is similarly funded (3 percent below average). The two-year institutions, on the other hand, vary in funding, operating at levels between 1 and 7 percent above average. This is a dramatic reversal of their 1979 profile, when they were substantially below average in total funding.

Faculty salaries at the public research universities and comprehensive institutions are 10 percent below average overall by 10 and 7 percent respectively, though faculty at the associate and assistant ranks are paid at rates closer to the U.S. average. Faculty at the public two-year institutions are also paid at below-average rates but by larger margins--13 to 18 percent below average. Rates of salary increase for faculty at the universities and comprehensive institutions, as well as in the two-year sector, were below average between 1977 and 1981.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 14,654,020
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 1,026,743*
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

* Includes funding for Iowa State Board of Regents, Iowa Department of Public Instruction, and Iowa College Aid Commission.

State payment for medically indigent patients is on a cost reimbursable basis.

State appropriations exclude $22,487,000 for state-level health care hospitals.

KANSAS

Recent Trends

State appropriations to public institutions in Kansas between 1977 and 1981 increased by 53 percent to $295 million. This rate of growth was 12 percent above average. Enrollments, however, increased 50 percent faster than average during this period. As a result, the inflation-adjusted value of state dollars improved only slightly, by 1.7 percent per student.

These gains in state funding were not evenly distributed across all categories of schools, and only two relatively small sectors (the public baccalaureate and academic/comprehensive two-year schools) showed any gains in inflation-adjusted state funding. All other sectors experienced erosion in their real-dollar state funding per student of 2 to 23 percent.

Tuition revenues did not generally keep up with inflation, so total revenues per student in constant dollars stayed basically level between 1977 and 1981. Again, however, there were significant sector differences. The University of Kansas had a small gain in overall funding of nearly 3 percent. There were also small gains (less than 1 percent) for the comprehensive and baccalaureate schools, and there was a 2.5 percent gain for the academic/comprehensive two-year schools. However, for Kansas State, this period represented a 5.3 percent loss in spending power, and for the University of Kansas Medical Center and Kansas Technical Institute, the losses were substantial (31.7 and 22.1 percent, respectively).

For the independents in Kansas, the period provided an average gain of nearly 9 percent in its spending per student.

State Financing of Higher Education

Despite an average state budget, Kansas directs a proportionately greater share of its funds to higher education. At $129 per capita in 1981, higher education received 28 percent more funds than average. This high level of support ranked Kansas 7th in the nation in per-capita funding of higher education. And of these funds, 99 percent went to support public higher education in the state. (This funding would be even higher if the public postsecondary vocational-technical sector were included.) Kansas also provides student aid to students attending independent institutions in the state, despite the small size of the sector and the fact that it enrolls only about half the number of state residents that is typical for such institutions.

State Tax Base and Budget

Kansas is 8 percent above average in tax capacity but 13 percent below average in tax effort. Tax revenues, at $908 per capita, were 5 percent below average. Kansas ranks among the top 10 states in the nation in tax capacity in licenses, farm property, and severance. However, none of these sources is a predominant source of tax revenues. Kansas obtains above-average tax funds from property taxes, but the leading sources of state tax revenues are general and selective sales, individual income, and residential and commercial property taxes.

Higher education and highways are the only two budget categories in the state that receive above-average budget shares. Higher education receives 12 percent of the budget, a share 33 percent greater than the norm, though its share in 1981 was smaller than that provided in 1977. Funding for highways, by contrast, was increased substantially from 12 to 14 percent of the budget, a share 56 percent above average. These above-average shares of the budget come at the expense of public welfare, health and hospitals, and public services, which receive shares between 9 to 23 percent below average.

Higher Education Enrollments

Residents of Kansas do about 3 percent better than average in rates of attendance in higher education. A lower rate of enrollment at the state's private colleges is more than compensated for by a significant degree of access provided by the state's public institutions--15 percent above average.

Total enrollments in the public sector are almost 30 percent above average, enrolling 37 FTE students per 1,000 capita. These enrollments result from the following factors: 11 percent above average first-time enrollment of residents, twice as many nonresidents, and somewhat above average full-time study patterns and retention rates. By contrast, the independent sector in Kansas is substantially below norms in both resident and nonresident enrollments.

The Kansas system of public higher education is relatively more expensive in character than average. There is a heavy emphasis on university-level education and graduate study, which are generally more expensive. In Kansas, 42 percent of students are in universities compared to 31 percent nationally. In addition, the average size of a public institution in the state is approximately 30 percent smaller than average, creating additional expense.

Institutional Finances and Characteristics

Per-capita state funding to the public sector is 38 percent above average, while enrollments are 27 percent above average. Although this combination creates a level of per-student state support that is 7 percent greater than average, the structure of higher education in the state dilutes these funds. Despite recent improvements in state funding, Kansas State University still receives 27 percent less per student than other similar institutions. The University of Kansas receives per-student appropriations that are 20 percent below the national average; for the comprehensive institutions state support per student is 6 percent below average. And Washburn University (general baccalaureate) receives only half as much as such schools obtain in state appropriations on average. On the other hand, the two-year institutions appear to be particularly well funded by the state, and the University of Kansas Medical Center receives close to the average in state support. These patterns are generally repeated in the total revenue profiles of these schools. In conclusion, then, large state contributions to higher education are clearly diluted by a large student population, concentrated in relatively expensive forms of education.

Faculty salaries are below average at both public and private institutions. In the public sector, only faculty at Washburn University of Topeka are paid at or above the average. These low pay scales in the public sector were further exacerbated by the below-average increases in faculty salaries between 1977 and 1981.

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 4,338,926
Postsecondary vocational-technical education	$ *
State boards and commissions	$ 1,174,254
Retirement benefits (including social security)	$ 2,780,535
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 621,125
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

* Kansas' vocational-technical schools have programs for secondary and postsecondary students. The costs and enrollments of the postsecondary component are not separately identifiable.

KENTUCKY

Recent Trends

Kentucky clearly improved its support for higher education between 1977 and 1981. Funding increases of 51.2 percent accommodated both a major increase in enrollments (5.2 percent) and inflation. As a result, the constant-dollar value of state appropriations improved by 2.7 percent per student in the public sector.

Not all segments shared in these gains. The University of Kentucky (medical research university), the comprehensive institutions, and the general baccalaureate schools lost ground in funding in real dollars per student. All other sectors had gains in state funding per student adjusted for inflation. Tuition revenues, however, even when adjusted for inflation and enrollments, took a nosedive in this period, decreasing by 6.3 percent. Still, fueled by the increase in state funding, total E&G revenues grew by 3.3 percent in the public sector, even after adjustment for inflation. Except for the comprehensive institutions, which showed a 3.1 percent drop in real-dollar funding, these gains affected every segment of the public sector. The University of Kentucky gained 3.1 percent, the University of Louisville improved by 6.7 percent, the baccalaureates--Kentucky State University and Northern Kentucky University--showed increases of 1.4 percent, and the two-year schools had gains of 1.8 percent.

State Financing of Higher Education

Kentucky spent $93 per capita in 1981 for higher education, 7 percent below the national average. This level of support is remarkable, given that the state's budget is 17 percent smaller than average, and required an extraordinary share of the state's budget. Almost all of these funds ($89 out of the $93 pot) are funneled to public institutions. A small amount supports student aid in both the public and private sectors and also provides indirect support to the public sector for state retirement benefits and the state commissions.

State Tax Base and Budget

Kentucky is below average in both its capacity to raise taxes and its willingness to do so. As a result, tax revenues collected in 1981 were 27 percent less than the U.S. average. Only six other states had fewer funds to finance public programs: Alabama, Tennessee, Mississippi, Arkansas, South Carolina, and New Hampshire. Kentucky has above-average capacity in some tax categories: selective sales, licenses, farm property, and severance taxes. Its tax effort, however, is above-average only in individual income, death and gift transfers, and severance taxes.

Higher education and highways both receive an above-average budget share in Kentucky. Health and hospitals receive the smallest relative share of the budget, a share 22 percent below the U.S. average. Public services is nearly as low a priority, receiving 18 percent less than average. Elementary/secondary education's share of the budget is 7 percent below average. Although higher education is clearly a preferred state activity, its share of the state budget declined somewhat from 1977 to 1981, continuing a drop that was evident in 1975 as well.

Higher Education Enrollments

By national standards, Kentucky, with only 27 per 1,000 residents enrolled in higher education, is a low access state. The national average is 34 per 1,000. This low enrollment is evident in every category, in-state public and private institutions as well as out-of-state schools. (Only six other states have a lower rate of enrollment by residents.) However, resident enrollments improved in Kentucky from 1979 to 1981.

Enrollment levels in public institutions in Kentucky are 17 percent below average, primarily because of low first-time enrollments by state residents. However, above-average nonresident enrollment, high retention rates, and large numbers of full-time students compensate to some degree and improve enrollment levels in the public sector.

Kentucky's public system, while slightly smaller than average in size, is significantly more university/comprehensive oriented and therefore more graduate in character than is usual. This structure contributes to the financial requirements of the state's public higher education system.

Institutional Finances and Characteristics

Kentucky provides 2 percent less state funding to the public sector to support 17 percent fewer students than average. Because of the smaller pool of students, there is higher state support per student. Kentucky provided $3,644 per student in 1981, a level 17 percent above average. This funding level was sufficient even to accommodate the state's more expensive structure of education. Every category of public institution is funded by the state at rates that are 1 to 30 percent above the average for similar classes of schools. Only the two-year sector differs from this general profile. Though the two-year sector is relatively small, representing only 14 percent of the state's public students, it is funded at rates that are approximately 25 percent below the average for such schools. The level of support to the two-year sector, however, improved from 1979 to 1981. When all sources of general operating funds are considered, a similar profile prevails. That is, all sectors except the two-year schools operate with funds close to or above the average for comparable schools.

Despite substantially above-average funding levels, Kentucky's faculty is underpaid in comparison to other states, on average by 10 percent. Recent rates of increase in faculty salaries have been close to, though still under, the national mean.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,654,106
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 1,541,000
Retirement benefits (including social security)	$ 8,253,795
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 21,294,000

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

LOUISIANA

Recent Trends

Between 1977 and 1981, state appropriations to public institutions in Louisiana more than doubled, reaching $393 million. During this same period, enrollments increased only slightly. As a result, the gains in state support (when adjusted for inflation) netted a 46 percent increase in per-student spending power for the public sector.

The readers should, however, be aware of a reporting problem for Louisiana State University and A&M College (LSU and A&M) that will affect the trend analysis for the university (the medical research university sector) as well as the entire state. Due to a reorganization within the Louisiana State University System (separation of the Paul M. Hebert Law Center and the Center for Agricultural Science and Rural Development from LSU and A&M), the data for LSU and A&M are not comparable between 1977 and 1981. If data had been reported for the same campus units in 1977 as in 1981, state and local appropriations would have been $22 million higher. Therefore, when evaluating the trend data for the state and for the medical research university, the readers should temper their conclusions.

Louisiana also made real-dollar gains in tuition revenues, creating a total improvement in per-student revenues (excluding grants and contracts) of 42.3 percent. All sectors of public institutions shared in these increases, ranging from 12 to 76 percent, except the comprehensive schools, where funds gained only 11.5 percent in inflation-adjusted terms. Fueled by the improvement in oil-extraction income, the state was able to improve its posture toward higher education significantly during this period.

State Financing of Higher Education

Louisiana spent $107 per capita on higher education in 1981, a rate of support 7 percent above average. Given that only two years earlier funding in the state was 20 percent below average, the shift in circumstances is notable. The vast share of these higher education funds is channeled to the public sector, primarily to support public institutions, including the state's postsecondary vocational schools. Louisiana also allocates a small amount of state student aid.

State Tax Base and Budget

Louisiana has above-average tax capacity but is extremely reluctant to tap this inherent wealth. Tax revenues in the state are therefore far below expected levels, given the state's scale of economic activity. Louisiana's tax potential is based on high corporate income, commercial and industrial property, and severance taxes and selective sales tax. Louisiana's tax structure emphasizes severance and general sales taxes, and nearly 55 percent of the state's tax revenues emanate from these two sources.

The state's budget priorities include highways and health and hospitals, the two public functions that receive above-average shares of state expenditures. Public welfare is the only function that receives an unusually small share of the budget, though that improved from 1977 to 1981. Higher education received a typical share of the state's budget in 1981, which was an improvement over 1977 allocations that were 20 percent below average.

Higher Education Enrollments

Louisiana residents appear to under enroll in higher education. Yet, when the 79,400 FTE students in postsecondary vocational schools are considered, residents then appear to enroll in higher education at above-average rates, and almost exclusively through attendance at the state's public institutions.

But because postsecondary vocational-education enrollments were not in the past included uniformly within federal higher education reporting systems, the remaining analysis in this report does not include those enrollments or the finances associated with them.

The public sector in Louisiana is 9 percent smaller than average because of below-average enrollment rates by both state residents and nonresidents. An above-average tendency to full-time study increases enrollments somewhat but not enough to equal the average.

Louisiana's system of higher education is primarily oriented toward the comprehensive sector, and 62 percent of public students are enrolled in one of the state's nine such institutions. This reliance on comprehensive schools is more than twice the U.S. average. The two-year segment is unusually small, enrolling only 7 percent of public students in this sector, compared to the U.S. average, 38 percent.

The independent sector is heavily graduate in focus, with 62 percent of its students in either a research university or a comprehensive institution. The independent sector in Louisiana is very small, however, about half the average size.

Institutional Finances and Characteristics

The gains in state appropriations over the past few years in Louisiana have improved the funding of public institutions in the state. In 1979, state support per student was 17 percent below average; by 1981, this profile had changed with state support per student reaching 12 percent above the U.S. average. In general, public institutions in Louisiana operate with 5 percent more funds per student than the U.S. average. Operating revenues, however, vary substantially by sector in Louisiana. Funding for the two-year institutions is better than average, by 39 percent at the two comprehensive/academic two-year schools and by 5 percent at the four occupational two-year schools. The health professional institution also receives above average support, 17 percent more than average. The general baccalaureates receive close to the U.S. average in support. The medical research university (Louisiana State University) and the large comprehensive sector still receive below-average support, both from the state and in total E&G revenues (excluding government grants and contracts). These sectors operate with funding that is approximately 20 percent below average for such institutions. Below-average state support for these schools is compounded by smaller than average revenues from tuition and private gifts, grants, and endowment.

Despite this low funding, faculty salaries at Louisiana State University are close to or above the U.S. average for the upper ranks. At the comprehensive institutions, faculty salaries for full professors are 10 percent below average; however faculty at other ranks are comparably paid. Surprisingly, the faculty at the two-year institutions are paid at below-average rates despite above-average total E&G revenues. Between 1977 and 1981, faculty salaries in the public sector grew one-third faster than those in other states.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 872,328
Postsecondary vocational-technical education	$ 41,123,782 (79,383 headcount students)
State boards and commissions	$ 9,819,292
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 419,070
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (nursing stipend, aid to private institutions)	$ 2,625,200

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 61,225,000*
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 3,102,403
- auxiliary enterprises	$ 8,943,274
- other	$ 655,484**
Tuition and Fees reappropriated by the state? ***	

Other Comments

* Includes funds for Vocational-technical schools.

** Capital outlay

*** Tuition is not an offset to appropriations. It is separately appropriated as self-generated dollars - tuition and fees.

Due to reorganization within the Louisiana State University System (separation of the Paul M. Hebert Law Center and the Center for Agricultural Sciences and Rural Development from the Louisiana State University and A&M College [LSU and A&M]), the data for LSU and A&M are not comparable between FY1977 and FY1981.

Source: Louisiana State Board of Regents

(Indexes shown in bold are based on U.S. average = 100)

MAINE

Recent Trends

Maine made an impressive improvement in its state appropriations to public institutions between 1977 and 1981. Appropriations were increased 55.6 percent, with the four two-year occupational schools receiving a 206.4 percent increase to accommodate their 81.0 percent increase in enrollments. Total E&G revenues per student in constant dollars increased 7.7 percent at Maine's public institutions, due to slight enrollment growth (3.9 percent) and tuition increases above the inflation rate. All sectors showed some improvements in funding during this period.

In the independent sector, the enrollment growth of 6.5 percent and inflation were offset by substantial increases in tuition, which increased the purchasing power of E&G revenues per student by 4.6 percent during the 1977 to 1981 period. The four two-year occupational schools collectively lost 27.6 percent in E&G revenue purchasing power, whereas the five other professional and specialized institutions gained 31.1 percent.

State Financing of Higher Education

State and local government direct institutional support for public institutions of higher education in Maine was $54 per capita in 1981, 40 percent below the national average, ranking the state 47th in the nation. But public enrollments per capita were also low, 26 percent below average, so state appropriations on a per-student basis of $2,494 (ranked 42nd) were 20 percent below average. Maine makes extensive use of tuition revenues to offset lower appropriations.

The state provides $2.50 per capita in student financial aid compared to the national average of $3.80. The state provides $7.00 per capita ($8.1 million) for operation of postsecondary vocational-technical institutes, which enroll 3,024 FTE students, and state boards and commissions.

State Tax Base and Budget

Maine is a tax-poor state with a potential tax capacity of $759.27 per capita, 20 percent below the national average of $948.73, which ranks it 45th in the nation. This is the result of relatively low tax potential in individual and corporate income and commercial property, and slightly below average potential in general and selective sales.

The tax effort of Maine is well above average, 11 percent above national average rates, with a state rank of 11th. As a result, collected tax revenues of $843.64 per capita are only 12 percent below average, ranking Maine 28th in tax funds available to support public services.

Maine allocates 8.1 percent of its tax revenues to higher education, substantially below the 11.0 percent national rate. As a result, appropriations for institutional support and student aid of $63.70 per capita are 36 percent below the national average, ranking Maine 47th.

If the total operating budget of Maine (including nontax revenues such as student tuition) is considered, highways and public welfare receive a larger share of the budget relative to national average allocations, and higher education and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

Maine, with an enrollment rate of 26 students per 1,000 population, is ranked 46th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000 population. Resident enrollment in higher education in Maine is 24 percent below average. Three of Maine's 26 resident students per 1,000 population attend colleges out of state, a level 50 percent above average. Nineteen residents per 1,000 population, or 73 percent, attend public institutions within the state; four attend independent institutions in state.

The public and independent institutions of Maine enroll 34,470 FTE students, a smaller than average higher education enterprise relative to the state's population. Enrollment in the public sector compared to the private sector (71 to 29 percent) is slightly less than the national average balance (76 to 24 percent). About 63 percent of public enrollments are at the state's two comprehensive institutions, the University of Maine at Orono and the University of Southern Maine. The state has 10,079 FTE students attending independent colleges.

The state is ranked 47th in public enrollment load, with 21.7 FTE students per 1,000 population, 26 percent below the national average. Only 31.9 percent of the state's high school graduates enter Maine's public institutions, compared to the U.S. average of 62.4 percent. Maine ranks 48th in the nation in this regard.

Institutional Finances and Characteristics

Maine's public institutions are well funded, making up for low state appropriations with high tuition. The two comprehensive institutions charge tuition that averages 54 percent above average. They secure private gifts and grants and other revenues that provide total educational and general revenues (excluding government contracts) per student that are 11 percent above average.

Instructional expenditures per student at the two comprehensive schools are 19 percent below average, and salaries for full-time faculty are 10 percent below average. The above-average revenues are used to heavily support research and public service.

The state's seven independent baccalaureate institutions, which enroll a majority of the private students, charge tuition 59 percent above average for these types of colleges. Together with above-average gifts and grants and other revenues, total E&G revenues for these seven schools is 53 percent above average. Expenditures for instruction and academic support are consequently well above average, as are faculty salaries.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 2,812,871
Postsecondary vocational-technical education	$ 8,071,820 (3,024 FTE)
State boards and commissions	$ 27,122
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 1,906,108
- other	$ 0

Tuition and Fees reappropriated by the state? *

Other Comments

* Tuition and fees are not appropriated for the University of Maine or Maine Maritime Academy, but they are for the VTI's.

Source: University of Maine

(Indexes shown in bold are based on U.S. average = 100)

MARYLAND

Recent Trends

Between 1977 and 1981, state higher education appropriations increased by 42 percent in Maryland, a rate that was 11 percent below the U.S. average. Enrollment gains also were below average with the student pool expanding by only 2.4 percent. Overall, increases in state funding were not sufficient to compensate for enrollment and inflation. As a result, real-dollar state funding per student fell nearly 1 percent. However, the patterns among the different sectors varied. Two of the five sectors (the comprehensives and general baccalaureates) received more state support and total funding in real dollar per student terms. The other three sectors, by contrast, lost ground.

Tuition revenues in the public sector did not keep pace with inflation and enrollments either, falling by 6 percent in real-dollar terms. Total revenues adjusted for inflation and enrollments therefore fell by nearly 2 percent overall.

The independent sector managed a major gain in support levels, with adjusted revenues per student rising by nearly 10 percent. All segments among the independent institutions, except the baccalaureates, saw some improvement in the purchasing power of their funds.

State Financing of Higher Education

Higher education receives an average share of the state's budget. The state's distribution of these funds within higher education, however, is atypical. Both the institutions themselves and student aid receive below-average shares, and the "other" category receives an unusually large share (nearly five times larger than usual). The state provides student aid and direct appropriations to both the public and independent sectors. The support given the independent sector is somewhat surprising given the small size of the sector and its low enrollment of residents.

State Tax Base and Budget

Maryland has an average tax base on which to draw, with particular strengths in individual income, general sales, and residential property. The state makes an above-average effort to tax this capacity, exerting the 13th-greatest tax effort in the country. Its tax structure places major emphasis on individual income taxes. Tax revenues in 1980 were $1,022 per capita, 7 percent higher than average.

Census figures for 1981 suggest that higher education's share of the state budget equals the U.S. average. In Maryland, only public services and the miscellaneous "other" category have an above-average share of the state budget. Higher education and elementary/secondary education are provided average shares, and all other functions receive smaller than average shares. Higher education's share of the state budget did not change from 1977 to 1981.

Higher Education Enrollments

Maryland residents enroll in higher education at rates just above the U.S. average--35 residents per 1,000 in contrast to the national average of 34 per 1,000. The result is an index of 103 for Maryland. This is due to higher than average rates of attendance by residents at the state's public institutions as well as at institutions in other states. Enrollment of residents at independent institutions in the state are lower by one-third as compared to the U.S. average.

First-time enrollment of residents at Maryland's public institutions is 13 percent greater than average. Enrollment of nonresidents at public institutions is 29 percent above average. However, these above-average enrollment rates are diminished by a somewhat below-average retention rate and by the enrollment of more part-time students than is usual. Still, total FTE enrollment in the public sector is just above average, and 30 FTE students per 1,000 capita enroll in public institutions. By contrast, enrollment in the private sector in Maryland is 44 percent lower than average.

Unlike that of most states, Maryland's public higher education system emphasizes two-year and baccalaureate institutions much more. As a result, university enrollments represent a smaller share in this state. Therefore, the overall cost of the system, in broad terms, is probably less than it would be with the typical configuration of enrollments.

Institutional Finances and Characteristics

Because public enrollment levels are somewhat above average and state support directly to institutions is somewhat below average, state appropriations per student are 11 percent below national rates. The funding of individual groups of public institutions, however, is more varied. For instance, the University of Maryland College Park campus receives substantially below-average funding from the state, 26 percent less than similar schools elsewhere. The baccalaureate schools receive 18 percent less per student than is typical for such schools. For the health professional school, the funding profile is even worse, with the state providing 54 percent less per student than average. The public comprehensive institutions are also below average in per-student state support, but to a lesser extent (6 percent). Only the 19 two-year institutions receive above-average funding from the state (indexed at 107 for the academic two-year schools and 124 for the occupational schools).

Maryland's tuition revenues per student are 46 percent higher than average for public institutions. In total revenues (excluding grants and contracts), four segments operate with above-average or close to average funding (the comprehensives, the baccalaureates, and both categories of two-year schools). Two public segments are substantially below average in funding levels (College Park, indexed at 77, and the Baltimore Professional Schools, indexed at 52). However, it is important to note that per-student funding for the baccalaureate institutions is overstated because the University of Maryland--University College operates a large overseas education program. Although total finances for this program are reported, the overseas students are not included in the enrollment figures.

Overall, faculty salaries in the public sector are very close to average, and for some faculty ranks are far better. For example, at College Park, the salaries of the major professorial ranks are above average even though the overall average for all ranks is 8 percent below the U.S. average. Salary increases between 1977 and 1981 in Maryland's public sector were somewhat above average. Increases at the Baltimore Professional Schools were particularly impressive, especially in light of diminished support during this period.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,500,884
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 9,345,141
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 1,401,530
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (Operating expenditures for extension instruction, Center for Environmental Studies, and Agriculture Experiment Station)	$ 12,459,012

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 25,175,000 (estimate)

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

MASSACHUSETTS

Recent Trends

Between 1977 and 1981, state appropriations to higher education in Massachusetts increased by only 22.6 percent, about one-half the national average. Even though enrollments in Massachusetts also generally grew more slowly than elsewhere, the net effect of small increases and inflation was a major loss in the per-student purchasing power of state funds for higher education during this period. The state's public sector saw the value of its state monies drop 5.0 percent, a loss that was greater in only three other states (Montana, Florida, and Wisconsin). Only two sectors did not share in these losses, the academic/comprehensive two-year schools and other professional/specialized institutions, where gains in constant dollars per student were 10 and 23 percent, respectively. The purchasing power of state funds dropped most at the Amherst campus of the University of Massachusetts (by almost one-third in inflation-adjusted terms) and at the University of Massachusetts Medical School--Worcester (where adjusted state funding fell by nearly two-thirds). The public general baccalaureate schools also suffered major declines in state support, with the real value of state funds falling 18.5 percent.

In contrast, tuition revenues surged forward in Massachusetts between 1977 and 1981. Tuition increases in this state, at 41 percent in real-dollar terms, were exceeded in only two other states (the District of Columbia and West Virginia). These substantial gains in tuition revenues compensated in large measure for the drop in state support, and overall public-sector revenues fell only 1.6 percent in constant dollars per student. Still the loss in purchasing power at the University of Massachusetts Medical School--Worcester was very large, amounting to nearly 44 percent. At the University of Massachusetts--Amherst, there was an 8 percent drop in overall purchasing power.

By contrast, the independent sector in Massachusetts registered small gains in funding, 2.1 percent overall in constant-dollar revenues. The independent research universities in particular fared well, gaining 16 percent in real-dollar support.

State Financing of Higher Education

Despite a very large pool of tax revenues, Massachusetts directs a below-average share of funds to higher education. As a result, per-capita funding of higher education at $59 is 41 percent below average. Only two states--New Hampshire and Vermont--spend less per capita on higher education than Massachusetts.

The state apportions 84 percent of these higher education funds to the public institutions in the state, a smaller share than average. A large share, 4 percent, funds state student aid, primarily for those students at independent institutions. The remaining 12 percent is allocated to public postsecondary education for other support (retirement benefits, the state board, and health-related support).

State Tax Base and Budget

Massachusetts is just below average in inherent wealth, but through a massive tax effort, collects tax revenues that are 29 percent above average. (Only New York and Alaska have higher tax rates than Massachusetts.) Massachusetts has strong economic bases to tap in both individual income and residential property. Its tax structure emphasizes both of these, along with corporate income taxes and other categories of property tax. Despite low sales taxes, the state collects a level of tax revenues that ranks it 6th in the nation. In property taxes of all types--residential, commercial, and farm--Massachusetts is second highest in the nation in tax rates. The state ranks 4th in the United States in its corporate income taxes and 9th in personal income taxes. Nearly 80 percent of its tax revenues come from these sources.

Although the Massachusetts budget is 8 percent larger than the national average, higher education receives the lowest share of the budget of any public function in the state. In 1981, for instance, only 4 percent of the state's expenditures went for higher education, less than half of the national average. Highways, public services, and elementary/secondary education also received lower shares of the state's budget. On the other hand, public welfare in particular and "other" functions received greater than usual portions of the state's budget.

Higher Education Enrollments

Massachusetts residents show a tremendous disposition toward higher education, with 41 of every 1,000 Massachusetts residents enrolling. The national average rate is 34 per 1,000. Massachusetts and California led the nation in the enrollment of residents. In California, this is because the state supports a large public system of higher education; in Massachusetts, above-average enrollment of residents primarily is due to high enrollment at the state's independent institutions and out of state. This is sufficient to compensate for below-average registration in the state's public institutions, which enroll 19 percent fewer residents than average.

Because nonresidents are also less likely to select public institutions in Massachusetts, total FTE enrollment in the public sector is 24 percent below average (22 FTE students per 1,000). Almost 60 percent of the state's students are at independent institutions. Only the District of Columbia enrolls a greater proportion of its residents in private schools. A below-average share of public enrollments in Massachusetts is at the university, and an above-average share is at comprehensive institutions. In the private sector, the opposite situation prevails, with 38 percent of the students at universities--a share two-thirds greater than average.

Institutional Finances and Characteristics

State funding of public higher education and student enrollment in the public sector are both below average. And because relative state funding is even smaller than the student base, per-student appropriations are almost 30 percent below the U.S. average.

The distribution of these funds differs markedly by type of institution. The public baccalaureate schools and the professional schools are both funded at above-average rates by the state. All other sectors are substantially undersupported by the state in comparison to their counterparts elsewhere (by 33 to 18 percent).

Revenues from other sources (tuition, gifts, other) are also below average for the public sector. As a result, most public institutional categories in Massachusetts function with below-average funding. The University of Massachusetts Medical School--Worcester is the major exception to this pattern and is funded at rates 50 percent better than average. The public baccalaureates operate with funds just above average for such schools.

Faculty salaries in the public sector are 6 percent below the national average, largely as a result of below-average gains between 1977 and 1981. In contrast to overall funding patterns, faculty salaries at the University of Massachusetts--Amherst are above average by 4 percent. Salaries at the public baccalaureate institutions are 15 percent above average overall. At other categories of public institutions, salaries are below average levels. Faculty at the private institutions in the state are paid far better, receiving 14 percent more in salaries than their counterparts elsewhere.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 14,496,100
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 5,029,759
Retirement benefits (including social security)	$ 32,196,957
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (Medical, Dental, Physical & Occupational Therapy and Veterinary Medicine Seats for Independent Institutions)	$ 1,637,950

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

(Indexes shown in bold are based on U.S. average = 100)

MICHIGAN

Recent Trends

State appropriations for public institutions in Michigan increased by only 33 percent between 1977 and 1981, a rate 30 percent below the national average. During the same period, enrollments in Michigan grew by 6.2 percent, a rate nearly 30 percent greater than the U.S. average. The combined effect of smaller appropriations increases, greater enrollment growth, and serious inflation caused Michigan's public dollar for higher education to shrink by 10.5 percent in real terms per student. All sectors of public higher education shared in these losses in public support, but to varying degrees. Overall, the two-year institutions and the professional/specialized schools were most affected, experiencing losses of between 15 to 20 percent in real-dollar state appropriations.

Tuition revenues grew approximately at the rate of inflation, and so overall public institutional funds shrank by 6 percent because of the losses in state appropriations. All sectors except the research universities had some loss of purchasing power, and even for those universities the gains were small (2.3 percent per student).

State Financing of Higher Education

Although Michigan's total budget is above average, higher education's slice of that tax revenue is somewhat smaller than average, resulting in per capita support that is 10 percent below average. Michigan provides a small amount of institutional support to independent institutions, while public institutions receive the vast majority of higher education funds. While the share of the higher education budget directed to public institutions is 4 percent greater than average, its size in per-capita terms is 5 percent below the U.S. average. Four percent of the state's higher education budget provides student aid in both the public and independent sectors.

State Tax Base and Budget

Michigan has a close to average tax base and is more willing to tap that capacity than is the average state. Due to this above-average effort, the state collects 12 percent more in tax revenues than the typical state. In all major tax categories except corporate income (sales, property, individual income) Michigan's level of economic activity is congruent with national patterns. The below-average profile of corporate economic activity reflects the slump in the automobile and related industries in Michigan. Its tax structure, though, heavily emphasizes both income (especially corporate income) and property taxes, which combined account for 70 percent of total tax revenues collected.

According to census figures, higher education is a favored state function in Michigan and receives an above-average share of the state's budget. This contradicts the profile depicted by tax revenues alone, which suggested that higher education receives a below-average share of the state's budget. Census figures indicate that public welfare and elementary/secondary education also receive larger budget shares than average, while health and hospitals and public services receive average budget shares. Highways and the "other" category obtain smaller relative shares. Higher education's budget portion did not change from 1977 to 1981.

Higher Education Enrollments

Residents of Michigan are somewhat more likely to pursue higher education than are residents of other states (index 103). The public sector enrolls 15 percent more residents than is typical. This high enrollment of residents in the public sector more than compensates for the below-average registration of residents at private colleges in the state and at institutions outside Michigan.

Reflecting this large resident enrollment, Michigan's public institutions enroll 15 percent more students per 1,000 capita than does the average public system. By contrast, the independent sector in Michigan is only 61 percent as large as the U.S. average.

Michigan's students are more likely to be enrolled in a university. Thirty-seven percent of Michigan's public students are studying at one of the four universities in the state. Generally, only 31 percent of students receive this type of education. Ten percent of all students are involved in graduate studies, a rate one-quarter greater than the mean. Michigan's focus on university education and graduate study creates a relatively more expensive combination of education to support.

Institutional Finances and Characteristics

Because public enrollment levels in 1981 were greater than state appropriations, state support per student was 18 percent below average, a much weaker financial picture than in 1979 when such state support was 6 percent below the norm. However, income from tuition and private gifts was substantially greater than average, causing total E&G revenues per student (excluding government contracts) to approach the average (index 98).

However, all categories of public institutions in Michigan operate with below-average total funding, except the academic two-year schools. In particular, the three research universities are funded at levels 10 percent below those of similar institutions in other states. Given the significant graduate emphasis of these institutions, the level of underfunding is even more serious. Western Michigan is 8 percent below average, and the four two-year occupational schools are 12 percent below average in total E&G funding per student. Michigan's public institutions do very well in government grants and contracts, exceeding average levels by 14 percent.

Public-sector faculty salaries in general are still 5 percent better than average, and most institutional categories generally follow this profile. However, salary increases between 1977 and 1981 lagged behind national rates, growing 8 percent more slowly than elsewhere.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 34,757,000
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 0
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

(Indexes shown in bold are based on U.S. average = 100)

MINNESOTA

Recent Trends

Public higher education in Minnesota received a 30.8 percent increase in state appropriations between 1977 and 1981, just enough to cover inflation. However, with an enrollment growth of 7.2 percent, public institutions experienced a loss of 12.7 percent in real value of appropriations per student.

The medical research university (University of Minnesota, Minneapolis-St. Paul) sustained the smallest loss in real-dollar appropriations, 4.6 percent, because of a slight enrollment decline. It made substantial increases in tuition, which secured an increase of 8.9 percent over the four years in total E&G revenues per student in constant dollars. The state's other public institutions were far less fortunate because of substantial gains in enrollment, which resulted in a 15 to 19 percent loss in appropriations per student adjusted for inflation. Further, they failed to raise tuition adequately to cover inflation and ended with 10 to 15 percent losses in real total E&G revenues per student.

Minnesota's 40 independent institutions raised tuition to offset both the 39.9 percent inflation and the 11.6 percent enrollment growth for the four-year period. The institutions averaged a remarkable 15 percent increase in total E&G revenues per student in constant dollars.

State Financing of Higher Education

State and local appropriations per capita for higher education in Minnesota totaled $115 per capita in 1981, 15 percent above the national average. Larger than average shares of these funds, however, went to student aid (7 percent overall) and "other" functions (23 percent, with the bulk going to postsecondary vocational education) such that the share going for public institutional support (70 percent) was substantially below average. In dollar terms, public institutions received $80 per capita, 12 percent less than is typical. Public enrollments per capita were slightly higher than average, so the state's appropriations on a per-student basis of $2,674 (ranked 38th) were 14 percent below the national average. In general, Minnesota makes up this ground with higher than average tuition and revenues from other sources.

The state provides a high $7.80 per capita support for student financial aid (ranked 5th), which is twice the national average. Minnesota also provides $26 per capita ($109.8 million) for support of its area vocational-technical institutes, which enroll over 34,000 FTE students, and for state boards and commissions, retirement benefits, and interstate contracts.

State Tax Base and Budget

Minnesota is a state with average tax potential and has a tax capacity of $969.33 per capita (22nd in the nation), 2 percent above the national average of $948.73. Minnesota has above-average tax capacity in general sales, property, and licenses.

The tax effort of Minnesota is 11 percent above national average rates, with a state rank of 11th. As a result, collected tax revenues of $1,077.22 per capita are 13 percent above average, ranking Minnesota 9th in the nation in tax funds available to support public services. The tax structure emphasizes income taxes, selective sales, and death and gift taxes.

Minnesota allocates 11 percent of its tax revenues to higher education, essentially equal to the national rate. As a result, appropriations for institutional support, student aid, and "other" support of $114.90 per capita are 15 percent above the national average.

If the total operating budget of Minnesota (including nontax revenues) is considered, highways and public welfare receive an above-average share of the budget and elementary/secondary education and "other" receive proportionately smaller shares.

Higher Education Enrollments

Minnesota, with an enrollment rate of 36 students per 1,000 population, is ranked 11th in the number of residents attending college anywhere. The national average is 34 students per 1,000. Two of Minnesota's 36 resident students per 1,000 population attend colleges out of state. Twenty-seven residents per 1,000 population, or 75 percent, attend public institutions within the state; seven attend independent institutions within the state.

The public and independent institutions in Minnesota enroll 162,560 FTE students, a slightly larger than average higher education enterprise relative to the state's population. Enrollment in the public sector compared to the private sector is 3 to 1, similar to the national average. Minnesota has an FTE public enrollment of 121,702 students. About 40 percent, 47,844, are enrolled at the University of Minnesota, Minneapolis-St. Paul campus, and 36 percent, 43,883, are enrolled at the state's six comprehensive institutions.

The state is ranked 24th in public enrollment load, with 29.8 FTE students per 1,000 population--2 percent above the national average. Minnesota has a low entrance rate of high school graduates to public institutions in the state (43.4 percent compared to the national average of 62.4 percent), but this is partially balanced by the much higher than average (17 per 1,000 population) number of high school graduates. Minnesota also has a higher than average retention factor (emphasis on upper-division and graduate programs) and conversion factor (more full-time than part-time enrollments).

Institutional Finances and Characteristics

The University of Minnesota receives state appropriations per student 17 percent below average for research universities with medical programs. Tuition and fees at the University of Minnesota are 9 percent below average. However, the university collects 98 percent more private gifts and grants than average and above-average other revenues, to secure total education and general revenues (excluding government contracts) per student that are near the national average. Expenditures for instruction and academic support at the university are near average; research and public service are above average. Full-time faculty salaries are at the national average.

The state's six comprehensive and 18 two-year academic colleges receive state appropriations that are 37 and 30 percent below average, respectively. The two-year colleges charge above-average tuition and secure other funding to raise total E&G revenues per student to 13 percent below average. The six comprehensive colleges, on the other hand, charge low tuition, and their total E&G revenues per student are only 67 percent of the average level for these types of institutions. Instructional expenditures per student are well below average for both the comprehensive and the two-year colleges. Faculty salaries are near average, suggesting that a high student-faculty ratio (29.5 FTE students per full-time faculty member) may be contributing to the low unit instructional expenditures.

Minnesota's 16 independent general baccalaureate colleges represent 64 percent of the independent enrollments in the state. They charge slightly above-average tuition and secure total E&G revenues per student 4 percent above average for these types of institutions. Instruction and academic support expenditures are above average, and public-service expenditures per capita are 4.74 times average. Full-time faculty salaries for these 16 institutions average 8 percent above the national norm.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 31,553,579
Postsecondary vocational-technical education	$ 92,381,233 (34,363 FTE)
State boards and commissions	$ 4,817,587
Retirement benefits (including social security)	$ 6,034,860
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 4,992,400
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 1,587,400
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 49,980,127

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 6,025,000
- other	$ 0

Tuition and Fees reappropriated by the state? *

Other Comments

* Tuition and fees are not remitted to the state and consequently are reported as tuition and fees.

Source: Minnesota Higher Education Coordinating Board

(indexes shown in bold are based on U.S. average = 100)

MISSISSIPPI

Recent Trends

State appropriations to public colleges and universities in Mississippi were increased by 71 percent between 1977 and 1981. Given the 1.6 percent enrollment gains as well as inflation, the net result of these large increases in state funds was a 20.4 percent real-dollar expansion in the state's commitment to higher education. These gains in state appropriations were widely shared within the public sector. No sector lost value in its per-student purchasing power.

Tuition did not keep pace with inflation in Mississippi, dropping 5.6 percent in real dollars per student. The overall effect of these changes was a net gain of 14.1 percent per student (in adjusted dollars) in total E&G revenues for the public sector. These funding improvements made Mississippi 10th in the nation in gains in real-dollar funding per student. Nationally, public systems gained an average 1.7 percent in real-dollar funding. The only public sectors not showing real-dollar gains in total funds were University of Mississippi--Medical Center and the two-year occupational schools, though the losses in these sectors were relatively small.

State Financing of Higher Education

Mississippi spent nearly $255 million for higher education in fiscal year 1981. This amounted to $101 for each citizen, a level just slightly greater than the U.S. average.

Although Mississippi is the poorest state in the nation as measured by its capacity to raise taxes, the state places a high priority on higher education. It allocates 16 percent of all tax revenues (and 13 percent of its total budget, including federal revenue-sharing funds) to this public function. The allocations far exceed the tax and budget shares of most states, and almost all of the funds--98 percent--are channeled into direct support of institutions. The remaining 2 percent provides student aid as well as support for the State Board of Trustees.

State Tax Base and Budget

Mississippi's capacity to raise taxes is 31 percent below the national average. In fact, its capacity is among the lowest five states in the country in eight of the ten tax categories studied in this report. Further, the state does not fully utilize its capacity, taxing at rates 4 percent below average. Mississippi's tax system emphasizes sales taxes and severance taxes. As a result, Mississippi collected only $635 per capita for public purposes. The national average level is $949 per capita. Mississippi tax revenues are therefore 34 percent lower than the U.S. average. This tax position improves somewhat with the infusion of federal revenue-sharing funds. In 1981, the state's total expenditure was $1,487 per capita, which was 17 percent below the average.

Mississippi devotes above-average shares of its state budget to highways (index 144), health and hospitals (index 144), and higher education (index 144). All other public functions receive smaller than usual shares: public welfare (index 85), elementary/secondary education (index 89), public services (index 73), and "other" miscellaneous functions (index 74). From 1977 to 1981, the budget share for higher education increased from 12 to 13 percent of the budget.

Higher Education Enrollments

From 1977 to 1981, resident enrollment rose from 30 per 1,000 population to 38 per 1,000 population (postsecondary vocational-education enrollments included). This rate places Mississippi among the leading ten states in terms of higher education enrollment of its citizens, and it is a direct consequence of high enrollments at public institutions in the state. Mississippi residents are half as likely as other states' residents to attend private institutions in the state or to migrate to other states for higher education. Their high rate of in-state participation is made possible by their state system of public higher education.

Despite a smaller number of high school graduates than the U.S. average, the first-time entrance rate of state residents equals the average. With 4 percent more out-of-state students than average and a high degree of full-time (versus part-time) study, the enrollment rate in public institutions is 3 percent higher than the national average. This is sufficient to overcome the system's lower retention rate.

Mississippi's system of public education is more university oriented and places less emphasis on comprehensive-institution enrollments than is the case in most states. Also, the institutions in the system are on average smaller in size. These two characteristics indicate a system that is more expensive to operate than the average. However, the lower emphasis on graduate enrollments in Mississippi's public system offsets this to some degree.

Institutional Finances and Characteristics

The profile thus far depicts a public higher education system funded at levels 9 percent above average and enrolling 3 percent more students than is typical. The closeness of these numbers brings appropriations per student to just above the U.S. average (by 5 percent).

In 1981, Mississippi allocated $3,259 per student to public institutions. However, the distribution of these funds varied by sector. Three sectors--the research university with veterinary medicine, Mississippi State University (index 104); the general baccalaureates, Alcorn State University and Mississippi Valley State University (index 126); and the two-year sectors, (indexes 100)--were funded by the state at levels equal to or above those of similar schools elsewhere. The remaining sectors were funded at rates below average. The university sector without medical programs (University of Mississippi and University of Southern Mississippi) along with the University of Mississippi Medical Center had the lowest relative levels of funding--8 and 13 percent, respectively, below levels for similar institutions across the United States.

Revenues from tuition are just below average (index 99) in the public sector, revenues from private sources are 40 percent below average, and those from other sources are 21 percent above average. Government grants and contracts are also substantially above average, by 11 percent. In net figures, total E&G revenues per student (excluding government grants and contracts) are just above the U.S. average, with noticeable variations by sector. In total funding, four sectors operate with above-average funding while three sectors receive revenues below the average.

Despite major improvements in faculty salaries between 1977 and 1981, in all categories of institutions all ranks are below national rates. Overall, faculty salaries for public institutions in Mississippi are 18 percent below the U.S. average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 3,461,713
Postsecondary vocational-technical education	$ *
State boards and commissions	$ 1,399,411
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

* Mississippi has a large postsecondary vocational education sector. State appropriations and enrollment levels for this sector, however, were not reported by FY81 and therefore not included here.

Mississippi does not require that tuition be appropriated. Tuition and fees not spent in one year may be rebudgeted for expenditure at the university in a later year.

(indexes shown in bold are based on U.S. average = 100)

MISSOURI

Recent Trends

Appropriations to public higher education in Missouri between 1977 and 1981 were outpaced by both enrollment increases and inflation. As a result, the purchasing power of state funding fell by 2.2 percent in real dollars per student. The medical research university (University of Missouri at Columbia) and the other professional and specialized institutions (University of Missouri at Rolla, and Harris-Stowe State College) were directly affected by these overall declines and found their state monies in real-dollar terms shrinking by 11.7 and 14.6 percent, respectively. All other sectors saw some improvement in the value of their state appropriations.

Tuition revenues also fell behind in this period, dropping 8.1 percent after adjustment for inflation and enrollment growth. With the declines in both state funding and tuition revenues, overall revenues in the public sector decreased by .3 percent in real-dollar terms per student. The largest decline was at the two-year occupational schools, where the constant dollar funding base dropped 36.1 percent. The professional/specialized schools saw their funding shrink by 10.4 percent, while at the Columbia campus of the University of Missouri funding fell 6.2 percent in constant dollars per student. All other sectors experienced small improvements in revenues.

State Financing of Higher Education

Missouri spent approximately $369 million for higher education in 1981, which translates into $75 per capita (25 percent below average). Three percent of these funds was used for state student aid, and the remaining funds were funneled to public institutions as general institutional support. Tax revenues in Missouri are also below average, by 22 percent. As a result, although higher education is accorded a typical budget share, the below-average size of the state budget means a below-average level of appropriations.

State Tax Base and Budget

Missouri ranks 33rd in the nation in its level of taxable wealth. The state has notably better than average tax capacity in three categories: farm property, licenses, and death and gift taxes. The state is close to average in the categories of general sales, selective sales, and individual income. In the remaining four categories, the state is substantially below average in tax capacity.

The combined effect of these conditions is a tax capacity 7 percent below average. The state, however, is markedly restrained in its use of even this reduced tax capacity. Only 83 percent of it is tapped, resulting in tax revenues even further below average. The state collected 22 percent less than the U.S. average in tax revenues: $742 per capita in contrast to the average state revenue of $949 per capita.

Highways, health and hospitals, public services, and elementary/secondary education are all priority state functions and receive above-average shares of the state and local government budgets. Higher education's share is average, while public welfare and "other" functions are given relatively smaller portions of the state's funds (indexed at 92 and 83, respectively).

Higher Education Enrollments

Missouri residents are about 15 percent less likely to enroll in higher education than the U.S. average. Although typical numbers of residents attend independent institutions in the state, fewer residents enroll in the state's public institutions or in out-of-state institutions. The effect is an enrollment rate of 29 students per 1,000 residents, which is in sharp contrast to the U.S. average of 34 per 1,000.

Enrollments in the public sector are 14 percent below average, despite a larger than average number of high school graduates and an above-average tendency toward full-time study. These low enrollment rates therefore appear largely to be tied to a lower rate of first-time enrollment by state residents and a lower rate of in-migration by non-residents.

More of Missouri's public students enroll in comprehensive institutions than in either universities or two-year institutions. Still, there are nearly as many graduate students enrolled in the public sector as the U.S. average. Enrollments in the private sector are more graduate in nature, despite a much lesser reliance on comprehensive-institution level of study. Approximately one-third of the state's students are enrolled at private institutions, a much larger percentage than is typical.

Institutional Finances and Characteristics

As we have seen, enrollments are 14 percent below average in the public sector and state funding is 20 percent below average. Because there are relatively fewer state dollars given the number of students to be supported, appropriations per student are 8 percent below average. However, individual sectors differ dramatically within that profile.

Among the large public institutional sectors in the state, state support ranges from 3 to 12 percent below average (3 percent less at University of Missouri--Columbia, 7 percent less at the comprehensive institutions, 12 percent less at the general baccalaureates, and 11 percent less at the academic/comprehensive two-year schools). If other sources of revenues are considered, these profiles improve some, such that the University of Missouri--Columbia operates with average funds and the comprehensive institutions within 4 percent of their comparison group. The academic/comprehensive two-year schools operate with average levels of total funds while the occupational two-year institutions receive more than twice the typical level per student.

Funding levels at the private institutions vary substantially. Only three sectors are well funded: Washington University in St. Louis and the two-year academic and occupational sectors. All other private institutions operate with 11 to 57 percent less funds per student than the U.S. average for similar institutions in other states.

Faculty salaries improved generally in Missouri between 1977 and 1981, increasing at rates 7 percent better than average. Despite these gains, however, faculty in the public sector are paid at levels 7 percent below average, and levels in the private sector are 9 percent below. Full professors appear to be the most directly impacted, and almost none of the averages for this rank are at or above the average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 9,818,211
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 639,644
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

MONTANA

Recent Trends

The funding of public higher education in Montana seriously declined during the 1977 to 1981 period, with the exception of funding for the state's three two-year academic and comprehensive colleges. With a sizable 42.9 percent increase in appropriations plus a 5.8 decrease in enrollments, these three schools were able to beat inflation and maintain total E&G revenues per student in constant dollars essentially level (plus 2.2 percent). Increases in appropriations and tuition at the state's six other institutions were inadequate to offset inflation and enrollment growth, with the result that total E&G revenues per student in constant dollars declined 27.6 percent at the state's two comprehensive colleges, 8.9 percent at the single baccalaureate college, and 28.4 percent at the three other professional and specialized schools.

Enrollment at Montana's seven independent colleges increased 22.9 percent between 1977 and 1981, which was sufficiently matched by tuition and other revenues to improve total E&G revenues per student in constant dollars by 11.3 percent.

State Financing of Higher Education

State and local government support for public institutions of higher education in Montana was $75.50 per capita in 1981, 17 percent below the national average, ranking the state 36th in the nation. Public enrollments per 1,000 population were 14 percent higher than average (ranked 13th), so the state's appropriations on a per-student basis of $2,259 (ranked 47th) were 28 percent below the national average of $3,099. Montana fails to make up this low level of support with revenues from other sources.

The state of Montana provides no appropriations for student financial aid. The national average for student aid support is $3.80 per capita.

State Tax Base and Budget

Montana is a tax-rich state with a potential tax capacity of $1,066.59 per capita, 12 percent above the national average of $948.73. This capacity, ranked 8th in the nation, is the result of relatively high tax potential.

The tax effort of Montana is 8 percent below average, with a state rank of 28th. As a result, collected tax revenues of $982.95 per capita are only 3 percent above average, ranking Montana 16th in the nation in tax funds available to support public services.

Montana allocates 8 percent of its tax revenues to higher education, substantially below the 11 percent national rate. As a result, appropriations for institutional support and student aid of $75.50 per capita are 25 percent below the national average, ranking Montana 40th in the nation.

If the total operating budget of Montana (including nontax revenues) is considered, highways and elementary/secondary school education receive an above-average share of the budget, and higher education, public welfare, and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

Montana, with 33 students per 1,000 population, is ranked 22nd in the number of residents attending college anywhere. The nation averages 34 students per 1,000. Three of Montana's 33 resident students per 1,000 population attend colleges out of state. Twenty-seven residents per 1,000 population, or 82 percent, attend public institutions within the state; three per 1,000 population attend state independent institutions.

The public and independent institutions of Montana enroll 29,429 FTE students, an average-size higher education enterprise relative to the state's population. Enrollment in the public sector compared to the private sector is 9 to 1, much higher than the national average of 3 to 1. About 70 percent of the 26,343 FTE public students attend the state's two comprehensive institutions--Montana State University and the University of Montana.

The state is ranked 13th in public enrollment load, with 33.4 FTE students per 1,000 population, 14 percent above the national average. This high level is due primarily to a large number of high school graduates, which partially offsets their lower than average entrance rate to state public institutions; a large in-migration of out-of-state students; and a high conversion factor which indicates that proportionately more students are enrolled full time than part time compared to national averages.

Institutional Finances and Characteristics

The two major public institutions in the state--Montana State University and the University of Montana--receive 25 percent less appropriations per student than average for comprehensive institutions, charge tuition that is 31 percent below average, and secure total educational and general revenues (excluding government contracts) per student that are 24 percent below average. Instructional expenditures per student and academic support per faculty member are thus below average. However, research per faculty member and public service per capita are above average for these two institutions. Full-time faculty salaries are 10 percent below average.

The state's single baccalaureate college receives nearly average state appropriations but charges too low a tuition to obtain the national average for total E&G revenues. The three two-year academic colleges operate with E&G revenues at the national average.

The state has seven independent colleges, which generally charge tuition too low to achieve national average E&G revenues. A single exception is the Dull Knife Memorial College, a two-year occupational school that charges tuition five times the national average; consequently total funding per student is far above average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational-technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state?

Other Comments

Source: No data notes were supplied by the state higher education agency/commission.

(Indexes shown in bold are based on U.S. average = 100)

NEBRASKA

Recent Trends

Appropriations in Nebraska were increased an average of 39.6 percent, but enrollment growth of 9.1 percent and inflation of 39.9 percent resulted in an 8.6 percent decline in appropriations per student in constant dollars. All sectors except the general baccalaureate and the academic two-year schools shared in these losses of state funding. Tuition also declined by 6.4 percent in real value per student. The result was an overall 6.9 percent decline in total E&G revenues per student in constant dollars.

Because of a combination of large appropriation increases and low or negative enrollment growth, Nebraska's two general baccalaureate colleges and four two-year academic colleges gained 8 percent in real-dollar E&G revenues per student. The University of Nebraska Medical Center had a substantial increase in enrollment of nearly 64 percent, which far outdistanced appropriations; thus the center sustained a 36 percent loss in total E&G revenues per student in constant dollars.

Nebraska's 14 independent institutions increased tuition and other revenues to compensate for inflation and a 13 percent growth in enrollment, creating a 15.2 percent improvement in real-dollar total E&G revenues per student.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Nebraska was $116.30 per capita in 1981, 28 percent above the national average, ranking the state 9th in the nation. But public enrollments were also above average by 19 percent (ranked 10th), so the state's per-student appropriations of $3,344 (ranked 15th) were only 7 percent above the national average of $3,099.

Nebraska appropriates no funds for student financial aid, whereas the national average is $3.80 per capita. The state appropriates $2.35 million for state boards and commissions and $1.3 million for interstate contracts.

State Tax Base and Budget

Nebraska is a state of average potential tax wealth, with a tax capacity of $918.34 (26th in the nation), 4 percent below the national average of $948.73. Nebraska has higher than average tax potential for general sales and lower than average potential for taxing corporate income and residential and commercial property.

The tax effort of Nebraska is 2 percent above the national average rates, with a state rank of 17th. As a result, collected tax revenues of $938.52 per capita are 2 percent below average, ranking Nebraska 21st in the nation in tax funds available to support public services.

Nebraska allocates a high 13 percent of its tax revenues to higher education, substantially above the 11 percent national rate. As a result, appropriations for institutional and "other" support of $118.70 per capita are 19 percent above the national average, ranking Nebraska 9th in the nation.

If the total operating budget of Nebraska (including nontax revenues) is considered, highways and higher education receive a larger share of the budget relative to national average allocations, and public welfare receives a proportionately smaller share.

Higher Education Enrollments

Nebraska, with an enrollment rate of 38 students per 1,000 population, is ranked 8th in the nation in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. On average, residents of the state are 12 percent more likely to enroll in higher education. Two of Nebraska's 38 resident students per 1,000 attend colleges out of state, a number equal to the national average. Thirty-two residents per 1,000 population, or 23 percent more than average, attend public institutions within the state; four per 1,000 attend state independent institutions (a level 33 percent below the U.S. average).

The public and independent institutions of Nebraska enroll 68,505 FTE students, an above-average size higher education enterprise relative to the state's population. Enrollment in the public sector is four times that of the private sector, higher than the national average balance of 3 to 1. Two-fifths of the state's 54,691 FTE public students attend the nonmedical research university (University of Nebraska--Lincoln), 17,220 students attend the state's three comprehensive colleges, and 10,072 attend five occupational two-year colleges.

The state is ranked 10th in public enrollment load, with 34.8 FTE students per 1,000 population--19 percent above the national average. The state graduates an above-average number of high school students, and their entrance rate to public institutions in the state is well above average (77.9 percent compared to 62.4 percent).

Institutional Finances and Characteristics

The University of Nebraska--Lincoln receives below-average state appropriations, charges below-average tuition, and secures total educational and general revenues (excluding government contracts) per student 9 percent below the average for research universities without medical programs. As a result, its instructional and academic support expenditures are below average, although the university's public-service program is nearly 12 times the national average per capita. Faculty salaries at the university are 4 percent below average.

The state's three comprehensive colleges are severely underfunded (index of 71 for total E&G revenues per student).

The cause is primarily low state appropriations, given that tuition is above average.

The state's five two-year occupational colleges, on the other hand, are well funded by the state (26 percent above average) and secure total E&G revenues per student 20 percent above average. Instructional expenditures at these schools are 7 percent above average, but the full-time faculty are underpaid by 23 percent compared to national averages.

Creighton University, a comprehensive school, is the largest independent institution in Nebraska. Creighton charges average tuition but receives above-average gifts and grants and other revenues, so total E&G revenues (excluding government contracts) per student are 65 percent above average. The seven independent baccalaureate institutions have slightly below average funding.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 2,352,164
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 1,300,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 5,783,630
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

The Task Force for building renewal appropriates funds for repair, energy conservation, and to provide access for the handicapped.

(Indexes shown in bold are based on U.S. average = 100)

NEVADA

Recent Trends

Nevada's 52.6 percent increase in appropriations to higher education from 1977 to 1981 was effectively cut in half by a 27.8 percent increase in enrollments, the second largest increase in the nation. Coupled with the 39.9 percent inflation for the period, the constant-dollar value of appropriations declined 14.7 percent. At the same time, tuition at public institutions was not increased adequately to offset the enrollment gain and inflation, resulting in a 13.9 percent loss in purchasing power per student. Thus Nevada's six public institutions sustained losses of 11 to 19.6 percent in total E&G revenues per student in constant dollars for the four-year period.

Nevada's single independent college, Sierra Nevada College, likewise unable to increase tuition to offset a 6.0 percent growth in students plus inflation, sustained an 8.3 percent loss in real value of E&G revenues per student.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Nevada was $74.50 per capita in 1981, 18 percent below the national average, ranking the state 37th in the nation. Public enrollments were close to the national average, so the state's per-student appropriations of $2,692 (ranked 37th) were 14 percent below the national average of $3,099. Nevada failed to make up for this low funding with revenues from other sources.

Nevada appropriates no funds for student financial aid, whereas the national average is $3.80 per capita.

State Tax Base and Budget

Nevada is a very tax-rich state with a potential tax capacity of $1,465.23 per capita (3rd in the nation), 54 percent above the national average of $948.73. This capacity is the result of a very high tax potential in general and selective sales, individual income, and residential property.

The tax effort of Nevada is 41 percent below national average rates, ranking Nevada lowest in the nation. Nevada has no individual income or corporate income taxes. As a result of high capacity and low effort, collected tax revenues of $871.92 per capita are 9 percent below average, ranking Nevada 26th in the nation in tax funds available to support public services.

Nevada allocates 9 percent of its tax revenues to higher education, significantly below the 11 percent national rate. As a result of lower than average tax revenues and allocation rates, appropriations for institutional support, student aid, and "other" support of $75.40 per capita are 25 percent below the national average, ranking Nevada 41st in the nation.

If the total operating and capital budget of Nevada (including nontax revenues such as student tuition) is considered, highways, public service, and health and hospitals receive a larger share of the budget than average and elementary/secondary and higher education and public welfare receive a proportionately smaller share.

Higher Education Enrollments

Nevada, with an enrollment rate of 28 students per 1,000 population, is nationally ranked 39th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Residents of the state are 18 percent less likely to pursue education than in the rest of the nation. Three of Nevada's 28 resident students per 1,000 attend colleges out of state, a level 50 percent above average. Twenty-five residents per 1,000 population, or 89 percent, attend public institutions within the state; less than one individual per 1,000 population attends state independent institutions.

The public and independent institutions of Nevada enroll 22,481 FTE students, a much smaller than average higher education enterprise relative to the state's population. For every 99 students enrolled in the public sector, there is 1 enrolled in the private sector--a much higher ratio than the national average balance of 3 to 1. The public FTE enrollment of 22,322 students is divided between the state's two comprehensive institutions[*] (the University of Nevada--Reno, and the University of Nevada--Las Vegas), with 13,713 students, and the state's four two-year colleges.

The state is ranked 31st in public enrollment load, with 27.7 FTE students per 1,000 population--6 percent below the national average. The state has a lower than average number of high school graduates per capita and a very high retention factor, which indicates the state's emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

The University of Nevada--Reno and the University of Nevada--Las Vegas receive appropriations per student 23 percent above average, and with substantial private gifts and grants, they secure total educational and general revenues (excluding government contracts) per student that are 34 percent above the average for comprehensive institutions. Instruction and academic support expenditures are above average, and the two institutions conduct four times as much research per faculty member as the national norm for comprehensive institutions.

The state's three two-year academic colleges receive appropriations that are 40 percent below average for these types of institutions. With low tuition, the institutions secure total E&G revenues per student that are 41 percent below average. As a result, instructional expenditures and faculty salaries are below average.

---

[*] If first-professional medical degrees were included in the count of doctoral degrees, the University of Nevada--Reno would be classified as a university with medical programs rather than a comprehensive institution.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 765,400
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 1,919,725
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

NEW HAMPSHIRE

Recent Trends

Funding changes for public institutions in New Hampshire varied among the sectors. Appropriations at the nonmedical research university (University of New Hampshire) were increased only 23 percent for the four-year period 1977 to 1981, compared to increases of 64 percent at the state's two baccalaureate institutions and 56 percent at the seven two-year occupational schools. With slight enrollment growth, inflation of 39.9 percent during this period resulted in the real value of these appropriations on a per-student basis declining 15.7 percent at the nonmedical research university. In contrast, the baccalaureate and two-year occupational institutions experienced increases of 12.0 percent and 9.3 percent, respectively. Only the two-year colleges increased tuition beyond the rate of inflation, creating a substantial 24.6 percent gain in real dollars per student. The university lost 4.5 percent in total E&G revenues per student in constant dollars, the baccalaureate colleges gained 5.5 percent, and the two-year colleges gained 10.8 percent.

State Financing of Higher Education

State and local government support for public institutions of higher education in New Hampshire was $38.20 per capita in 1981, 58 percent below the national average, ranking the state last in the nation. Public enrollments were also low, 25 percent below average, so the state's per-student appropriations of $1,731 (ranked 50th) were 45 percent below the national average. New Hampshire makes extensive use of tuition revenues to offset these low appropriations and thus achieves nearly average per-student total funding.

The state appropriates $.30 per capita for student financial aid. The national average student financial aid is $3.80 per capita.

State Tax Base and Budget

New Hampshire has average tax wealth, with a potential tax capacity of $915.54 per capita (28th in the nation), 4 percent below the national average of $948.73. The state has above-average capacity in selective sales and residential property and below-average tax potential in corporate income and commercial property.

The tax effort of New Hampshire is 25 percent below national average rates, with a state rank of 46th. The state has no general sales tax. As a result of average tax capacity and low tax effort, collected tax revenues of $686.85 per capita are 28 percent below the national average, ranking New Hampshire 46th in the nation in tax funds available to support public services.

New Hampshire allocates only 6 percent of its tax revenues to higher education, far below the national average rate of 11 percent. As a result of low tax revenues and a low allocation rate, appropriations for institutional support, student aid, and "other" support of $38.70 per capita are 61 percent below the national average, ranking New Hampshire last in the nation.

If the total operating budget of New Hampshire (including nontax revenues) is considered, highways receive a larger share of the budget relative to national average allocations, and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

New Hampshire, with an enrollment rate of 25 students per 1,000 population, is ranked 49th in the nation in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Residents of the state are 26 percent less likely to go to college. Four of New Hampshire's 25 resident students per 1,000 attend colleges out of state, a level twice the U.S. average. Fifteen residents per 1,000 population, or 60 percent, attend public institutions within the state; four per 1,000 attend state independent institutions.

The public and independent institutions of New Hampshire enroll 39,457 FTE students, an above-average size higher education enterprise given the state's population. Enrollment in the public sector (52 percent) compared to enrollment in the private sector (48 percent) is substantially lower than the national average ratio (76 percent to 24 percent). Over half the 20,377 FTE public enrollment are students attending the University of New Hampshire. The other public students attend the state's two baccalaureate institutions and seven two-year occupational colleges. The state has 15 independent institutions, enrolling 19,080 FTE students.

The state is ranked 46th in public enrollment load, with 22.1 FTE students per 1,000 population--25 percent below the national average. Only 27.5 percent of the state's high school graduates enter New Hampshire's public institutions, compared to the U.S. average of 62.4 percent. The state has a high in-migration of nonresidents who attend public institutions.

Institutional Finances and Characteristics

The University of New Hampshire receives state appropriations per student that are 53 percent below the national average, as do the state's two baccalaureate institutions (51 percent below). Surprisingly, the seven public two-year occupational colleges receive state appropriations nearly equal to the national average. Tuition is above average at all of the state's public institutions, which increases total educational and general revenues per student to near the national average for two-year colleges and within 10 percent at the baccalaureates. University revenues, however, are still 15 percent below average.

Expenditures for instruction per student at the University of New Hampshire are 25 percent below average for research universities without medical programs. Full-time faculty salaries at the university are 12 percent below the national average. Research expenditures are average for this type of institution. The public-service program at the university is large, spending 3.3 times the national average per capita.

In the independent sector, the state's two comprehensive private colleges are well funded, receiving 2.75 times the national average in total E&G revenues per student. The five baccalaureate colleges receive funding nearly equal to the national average; however, the three two-year occupational schools and the four professional schools are substantially underfunded, with instructional expenditures and faculty salaries well below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 273,934
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 167,034
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

NEW JERSEY

Recent Trends

State appropriations to public higher education in New Jersey increased 46.8 percent between 1977 and 1981, a change close to average. Enrollments jumped 6.3 percent during this time, an increase 29 percent higher than the national average. All sectors except the comprehensives experienced losses in the purchasing power of state support. Appropriations per student in constant dollars fell over 10 percent at two-year colleges and by 17 percent at the health-professional institute.

Tuition per student fell 12.1 percent in constant dollars during the four-year period. All of these factors taken together resulted in losses in total E&G revenues to public institutions that averaged 3 percent per student in constant dollars.

The 31 independent institutions in the state increased enrollment 3.4 percent from 1977 to 1981. The four-year change in total E&G revenues per student in constant dollars ranged from a loss of 8.5 percent at private two-year academic schools to a gain of 19.4 percent at two-year occupational schools.

State Financing of Higher Education

State and local appropriations to higher education in New Jersey were $83 per capita, a level 17 percent below average. General institutional support for public institutions was $65.80 per capita in 1981, 27 percent below the national average, ranking the state 43rd in the nation in this measure. But public enrollments per capita were equally low, so the state's per-student appropriations of $2,971 (ranked 27th) were only 5 percent below the national average of $3,099.

The state of New Jersey appropriates $5.60 per capita for student financial aid (ranked 7th), which is 47 percent more than the national average. The state also provides $10.00 per capita for retirement and fringe benefits ($67.2 million) and state boards and commissions ($3.76 million).

State Tax Base and Budget

New Jersey has above-average tax potential, with a tax capacity of $996.88 per capita (19th in the nation), 5 percent above the national average of $948.73. This capacity is the result of above-average tax capacity for individual income and residential and commercial property.

The tax effort of New Jersey is 11 percent above national average rates, with a state rank of 10th. As a result of above-average capacity and effort, collected tax revenues of $1,116.18 per capita are 17 percent above average, ranking New Jersey 8th in the nation in tax funds available to support public services.

New Jersey allocates 8 percent of its tax revenues to higher education, substantially below the 11 percent national rate. As a result of higher than average tax revenues and a lower than average allocation rate, appropriations for institutional support, student aid, and "other" support of $83.30 per capita are 17 percent below the national average, ranking New Jersey 37th in the nation.

If the total operating budget of New Jersey (including nontax revenues) is considered, elementary/secondary education and public services receive a larger share of the budget relative to national average allocations, and higher education and highways receive a proportionately smaller share.

Higher Education Enrollments

New Jersey, with an enrollment rate of 32 students per 1,000 population, is nationally ranked 26th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Six percent fewer residents enroll in higher education than is usual. While more than two and a half times the usual number of residents go out of state, enrollment in the public sector in the state is 19 percent below average. This accounts for the below-average access of residents.

The public and independent institutions of New Jersey enroll 218,884 FTE students, a much smaller than average size higher education enterprise given the state's population. Enrollment in the public sector compared to enrollment in the private sector is 75 percent to 25 percent, almost the same as the national average balance. Public enrollment in the state is broadly distributed between the nonmedical research university (Rutgers University--New Brunswick), six comprehensive institutions, five baccalaureate colleges, nine two-year academic colleges, and eight two-year occupational schools. New Jersey has 31 independent institutions, enrolling 55,529 FTE students.

The state is ranked 45th in public enrollment load, with 22.1 FTE students per 1,000 population--25 percent below the national average. Only 48.3 percent of the state's high school graduates enter New Jersey's public institutions, compared to the U.S. average of 62.4 percent. Also, the state has a very low in-migration of out-of-state students who attend public institutions.

Institutional Finances and Characteristics

State and local appropriations are rather unevenly distributed among New Jersey's public institutions compared to national averages. Rutgers University receives nearly average appropriations per student, as do the state's five baccalaureate colleges. The state's six public comprehensive colleges receive appropriations 21 percent below the national average. The nine two-year academic colleges receive funds 13 percent below average, and the eight two-year occupational colleges receive appropriations 27 percent below average. State funding at the specialized institution is substantially above average. Tuition at all public institutions is above average, particularly at the two-year academic schools and the health professional institutions. As a result, all public institutions operate within 5 percent of the national average in total educational and general revenues (excluding government grants) per student, except the comprehensive and two-year occupational colleges and the specialized schools.

Instructional expenditures per student are at or within 10 percent of national averages at the state's public institutions except at the eight two-year occupational schools, where they are 32 percent below average. Full-time faculty salaries are generally above average in the public sector.

In the private sector, universities without medical programs (the category that includes Princeton University) are funded at 2.1 times the national average. Tuition in this category is 1.3 times the national average. The lowest-funded private institutions are the three two-year academic schools, which have total educational and general revenues per student 27 percent below the national average for this institutional category.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 41,263,798
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 3,759,122
Retirement benefits (including social security)	$ 67,209,727 (includes fringe benefits)
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 202,788
Centrally administered capital/debt service	$ 0
Other	$ 3,859,252

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 43,246,000
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 9,479,588*
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No answer provided

Other Comments

* The fee revenues for these expenditures are generated entirely by students.

(Indexes shown in bold are based on U.S. average = 100)

NEW MEXICO

Recent Trends

Appropriations for higher education increased 72.3 percent in New Mexico from 1977 to 1981 (1.5 times the national rate), making the state 6th in the nation in percentage increase. This increase more than offset inflation and the large enrollment gains at the state's public two-year colleges, resulting in an increase of 18.1 percent in the real-dollar value of appropriations per student--seventh highest in the nation.

This large increase more than compensated for a slight average decline in the real-dollar value of tuition per student. Thus the four-year constant-dollar change in total E&G revenues per student improved for all public institutions in the state, with an average increase of 21.4 percent, the fourth highest increase in the nation.

Real E&G funding of the University of New Mexico main campus increased 28 percent per student, and the seven two-year academic college funding increased 33.6 percent in constant dollars per student.

The three independent baccalaureate colleges in the state sustained a 14.2 percent decline in enrollment but received 16.1 percent more total E&G revenues per student in constant dollars.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in New Mexico was $105.20 per capita in 1981, 16 percent above the national average, ranking the state 16th in the nation. But public enrollments per capita were equally high (8 percent above average), so the state's per-student appropriations of $3,315 (ranked 17th) were only 6 percent above the national average of $3,099.

New Mexico does not appropriate any funds for student financial aid, whereas the U.S. average is $3.80 per capita.

State Tax Base and Budget

New Mexico has above-average tax potential, with a tax capacity of $1,016.20 per capita (16th in the nation), 7 percent above the national average of $948.73. This capacity is the result of above-average potential for selective sales and severance taxes.

The tax effort of New Mexico is 17 percent below national average rates, with a state rank of 42nd. As a result of this combination of above-average capacity and low effort, collected tax revenues of $844.73 per capita are 11 percent below average, ranking New Mexico 27th in the nation in tax funds available to support public services.

New Mexico allocates a high 13 percent of its tax revenues to higher education, substantially above the 11 percent national rate. As a result of below-average tax revenues and a high allocation rate, appropriations for institutional support of $105.20 per capita are 5 percent above the national average, ranking New Mexico 21st in the nation.

If the total operating budget of New Mexico (including nontax revenues) is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and public welfare and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

New Mexico, with an enrollment rate of 29 students per 1,000 population, is ranked 36th in the nation in the number of residents attending college anywhere. On average, 15 percent fewer residents enroll in higher education. Very few residents attend private institutions in the state and 4 percent fewer enroll in public institutions. More residents (50 percent more) go out of state for their schooling.

The public and independent institutions of New Mexico enroll 43,725 FTE students, a slightly smaller than average size higher education enterprise relative to the state's population. Enrollment in the public sector is 19 times that of the private sector, a much higher ratio than the national average balance of 3 to 1. The 41,395 FTE students enrolled at public institutions in the state primarily attend the University of New Mexico main campus (17,111), the New Mexico State University main campus (11,127), and the state's four comprehensive colleges (7,135).

The state is ranked 16th in public enrollment load, with 31.7 FTE students per 1,000 population--8 percent above the national average. Only 39.2 percent of the state's high school graduates enter New Mexico's public institutions, compared to the U.S. average of 62.4 percent. However, the heavy public load comes from a larger than average number of high school graduates, a large in-migration of nonresidents, and a high retention factor, which indicates the state's emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

The division of state appropriations among the public institutions with major enrollments in New Mexico is unusual. The four comprehensive colleges receive appropriations per student 42 percent greater than the national average for these types of institutions. New Mexico State University, a research university without medical programs, receives appropriations 7 percent below average for this category of institution. And the University of New Mexico, a university with medical programs, receives appropriations 19 percent below average. Tuition at both universities is substantially below average; however, New Mexico State University has a high level of private gifts and grants. The end result is that the four comprehensive colleges receive total educational and general revenues per student that are 40 percent above average; New Mexico State University, 3 percent below average; and the University of New Mexico, 16 percent below average. The two-year schools operate with funding that is 10 to 78 percent above average.

These varying support levels are reflected in the various institutions' expenditure levels, with only the four comprehensive institutions and the two-year institutions exceeding national averages in instruction expenditures per student.

New Mexico has three small independent baccalaureate colleges, funded at 26 percent below the national average for these types of institutions. However, they receive an above-average level of government contracts per faculty member and provide funding for instruction and academic support only about 7 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational-technical education	$
State boards and commissions	$
Retirement benefits (including social security)	$
Fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$
- auxiliary enterprises	$
- other	$
Tuition and Fees reappropriated by the state?	

Other Comments

Source: No data notes were supplied by the state higher education agency/commission.

(indexes shown in bold are based on U.S. average = 100)

NEW YORK

Recent Trends

In 1981, New York spent $1.845 billion on higher education, which in per-capita terms represents a level 5 percent above the national average. Even so, compared to 1977 this level of funding represented an erosion of nearly 3 percent in the per-student purchasing power of state funds. Stated differently, the 37 percent gain in state funding to public institutions from 1977 to 1981 was more than consumed by inflation. Most categories of institutions experienced losses in their inflation-adjusted state funding, except for the research universities without medical programs (SUNY Buffalo and Stonybrook), the comprehensives, and the "other specialized" institutions.

Tuition revenues also declined by 17 percent in constant dollars. The net result of these real-dollar declines in both state appropriations and tuition was a decrease of 5.6 percent in total revenues (excluding government grants and contracts). Only two public sectors were not negatively affected: the research universities without medical programs, which had gains of 9.2 percent, and the comprehensives, which basically stayed even (+.6 percent).

State Financing of Higher Education

Despite these real-dollar losses in state appropriations, New York still provides 5 percent more support per capita for higher education than the national average. Moreover, New York provides more financial support to the independent sector ($13 per capita) than does any other state. In total, 12 percent of the state's higher education budget is channeled to the private sector. The national average is 3 percent. New York also provides more student aid ($14.10 per capita) than does any other state except Alaska.

Only Massachusetts enrolls a greater portion of its population in private institutions. As a consequence of the substantial allocation of funds to private higher education and the emphasis on student aid in the public sector (nearly four times the national rate), direct institutional appropriations to the public sector are 8 percent below average. In 1981, the state appropriated 85 percent of its higher education budget to public institutions, 11 percent below average. Still, compared to two years before, this was an increase.

State Tax Base and Budget

New York has about 10 percent less taxable wealth than the typical state, ranking it 37th in tax capacity. However, by levying the highest tax rate in the nation (67 percent above average), the state overcomes its below-average wealth and raises more tax revenues than does any other state except Alaska. New York has above-average tax capacity in three of the ten tax categories--individual income, corporate income, and death and gift transfers. The state makes a below-average tax effort in three relatively minor categories, death and gift taxes, licenses, and severance, and the capacity of the latter two is inherently low anyway. New York leads the nation in individual income tax rates (index 199) and in overall property tax, and it is second in tax rates for corporate income. The state also levies substantial taxes in general and selective sales taxes (indexes 139 and 107 respectively).

The net effect of these tax rates is that the state collects $1,431 per capita in tax revenues, exceeding by $576 its tax capacity of $855. This massive tax program enables the state to collect 50 percent more in revenues than average tax rates could yield.

Census data for 1981 show that New York's operating budget, including federal revenue-sharing funds, is one-third greater than average. However, only two functions receive above-average shares of this large budget: the miscellaneous "other" category and public welfare. New York spends 16 percent of its budget on public welfare, 23 percent more than the national average. Higher education gets the smallest share of the budget (only 5 percent), 44 percent below the national average share. The share has not changed since 1977.

Higher Education Enrollments

New York residents are 15 percent more likely to enroll in higher education than average. Ranking 4th nationally, New York attains this level of enrollment because its rate of attendance at independent institutions--14 per 1,000 population--is more than twice the national rate. Only Massachusetts exceeds this rate. Enrollment at public institutions in state is about 12 percent below average, and an average number go out of state.

Not only is resident enrollment below average at the state's public institutions, but these institutions in New York draw only one-quarter as many nonresidents as is average. As a result, enrollment in the public sector is 18 percent below average, although above-average rates of persistence and full-time study compensate to some degree. Public institutions enroll 24 FTE students per 1,000 population, compared to the U.S. average of 29 per 1,000.

New York provides much less emphasis on university studies and significantly more emphasis on study at two-year institutions than average in the public sector. In addition, its comprehensive sector is larger than usual. The portion of students enrolled in universities is approximately half the usual share, creating a relatively less expensive system of higher education to support. By contrast, the independent sector is more university and comprehensive oriented and is therefore a more costly mix.

Institutional Finances and Characteristics

Although state support to public institutions in New York is 8 percent below average, enrollment levels are even lower (18 percent below average). As a result, appropriations per student in New York are 12 percent above average, with all sectors except the health professional sector funded at rates close to or above average. Tuition revenues are also substantially higher than average, by 25 percent, thus creating a significant base of support for the public sector. In total, all public sectors except the public health professional (index 74) and specialized institutions (index 100) are funded at levels substantially above average (ranging from 15 to 79 percent), despite the fact that government grants and contracts, private gifts, and other E&G funding are markedly below average (by 30 percent).

Independent institutions in New York are well funded by national standards, largely as a consequence of substantial tuition revenues and strong endowment income. Unlike the public institutions in New York, private institutions have been very successful in securing government grants and contracts. These schools receive nearly 40 percent more per faculty member than do average U.S. independents.

Faculty salary increases in New York's public and independent sectors kept pace with national trends from 1977 to 1981. Overall, salaries in the public sector in New York are 5 percent above average, while those at independent institutions are 9 percent above average for that category.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$263,800,000 (estimate)
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 14,200,000
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 1,500,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ unable to estimate
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 60,000,000

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No answer provided

NORTH CAROLINA

Recent Trends

North Carolina's higher education appropriation increase of 62.5 percent for the four years 1977 to 1981 ranked 12th in the nation. However, with enrollments increasing 10.6 percent (10th in the nation) and inflation at 39.9 percent, the gain in real dollars per student was only 5.1 percent, and this was unevenly distributed by sector. Tuition per student in constant dollars declined 15.7 percent overall at North Carolina public institutions, a decline that was also unevenly distributed. The result was quite a range of changes in total E&G constant-dollar revenues. Real funding improved at the medical research university (University of North Carolina at Chapel Hill) and the nonmedical university (University of North Carolina at Greensboro), at the six comprehensive colleges, at the nine two-year academic/comprehensive schools, and at the specialized institutions. Losses were sustained at the nonmedical research university (North Carolina State University--Raleigh), the six general baccalaureate institutions, and the two-year occupational schools.

In the independent sector, real-dollar E&G revenues per student at Duke University declined 8.9 percent. The positions of most other private sectors improved.

State Financing of Higher Education

State and local government institutional support for public institutions of higher education in North Carolina was $107.60 per capita in 1981, 18 percent above the national average, ranking the state 13th in the nation. Public enrollments per capita were also above average by 4 percent, so the state's per-student appropriations of $3,515 (ranked [illegible]1th) were 13 percent above the national average of $3,0[illegible]9.

State Tax Base and Budget

North Carolina has a poor tax potential, with a tax capacity of $754.34 per capita (46th in the nation), 21 percent below the national average of $948.73. This low capacity is the result of below-average tax capacity for general sales, individual and corporate income, and residential, commercial, and farm property.

The tax effort of North Carolina is near the national average, with a state rank of 21st. However, because of the low potential, collected tax revenues of $730.97 per capita are 23 percent below average, ranking North Carolina 42nd in the nation in tax funds available to support public services.

North Carolina allocates an exceptionally high 15 percent of its tax revenues to higher education, well above the national rate of 11 percent. As a result of low tax revenues and this high allocation rate, appropriations for institutional support and student aid of $107.60 per capita are 7 percent above the national average, ranking North Carolina 16th in the nation.

If the total operating budget of North Carolina (including nontax revenues) is considered, higher education, elementary/secondary education, and health and hospitals receive a larger share of the budget relative to national average allocations, and highways, public welfare, and public services receive a proportionately smaller share.

Higher Education Enrollments

North Carolina, with a rate of 34 students per 1,000 population, is nationally ranked 17th in the number of residents attending college anywhere. The nation also averages 34 students enrolled per 1,000. One of North Carolina's 34 resident students per 1,000 attends a college out of state. Twenty-seven residents per 1,000 population, or 79 percent, attend public institutions within the state; six per 1,000 attend state independent institutions.

The public and independent institutions of North Carolina enroll 235,265 FTE students, a larger than average size higher education enterprise relative to the state's population. With 76 percent enrolled in the public sector and 24 percent enrolled in the private sector, the ratio is roughly the same as the national average balance of 3 to 1. The 179,248 FTE public enrollment is broadly distributed among many types of institutions, with 62,663 students attending the state's 48 two-year occupational schools and 45,424 attending the six public comprehensive institutions.

The state is ranked 21st in public enrollment load, with 30.4 FTE students per 1,000 population--4 percent above the national average. A high 67.7 percent of the state's high school graduates enter North Carolina's public institutions, compared to the U.S. average of 62.4 percent. Also, North Carolina's public institutions have a high conversion factor, which indicates that proportionately more students than average attend full time rather than part time.

Institutional Finances and Characteristics

North Carolina has above-average appropriations for all of its public institutions, with the University of North Carolina at Chapel Hill and the two-year academic institutions receiving appropriations 35 percent above the national average and North Carolina State receiving funds 45 percent above average. Tuition charges are less than average at all public institutions. All of the public institutions in the state have above-average total educational and general revenues (excepting government contracts) per student, except the University of North Carolina--Greensboro (6 percent below average) and the state's 48 two-year occupational colleges (4 percent below average).

Instructional expenditures per student are above average for all public institutions, particularly the University of North Carolina at Chapel Hill where the level is 57 percent above average for this type of institution. Full-time faculty salaries are overall 5 percent below the national average with variations by institutional sector.

The state's 53 independent institutions are generally well funded, with one notable exception--Duke University. Duke receives total E&G revenues (excluding government contracts) per student 25 percent below average for independent research universities with medical programs, primarily because of low tuition. Both instructional expenditures per student and academic support per faculty member at Duke are about 20 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid $

Postsecondary vocational-technical education $

State boards and commissions $

Retirement benefits (including social security) $

Fringe benefits $

Interstate contracts and reciprocity payments $

Service functions provided centrally (e.g., computer service, library, telephone, etc.) $

Centrally administered capital/debt service $

Other $

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state $

Current Funds revenues dedicated to capital purposes:

- tuition and fees $
- auxiliary enterprises $
- other $

Tuition and Fees reappropriated by the state?

Other Comments

Source: No data notes were supplied by the state higher education agency/commission.

(Indexes shown in bold are based on U.S. average = 100)

NORTH DAKOTA

Recent Trends

State and local funding of public higher education in North Dakota increased by 63.9 percent between 1977 and 1981, ranking North Dakota's increase 11th in the nation. Enrollments were growing rapidly during this time period, increasing by 10.9 percent--2.2 times the national average. After adjustments for inflation, all public sectors except general baccalaureate institutions experienced gains in the per-student purchasing power of state appropriations.

Tuition revenues at public institutions, however, did not keep pace with inflation, falling an average of 5.7 percent in real dollars per student. Nevertheless, the gains in state funds and other sources were sufficient to accommodate both inflation and enrollment growth, with most types of public institutions (except the comprehensives and baccalaureates) showing real-dollar expansion in their revenue budgets. These gains were greatest at the two-year colleges (11 to 12 percent) and at Mayville State College, a professional/specialized school (38.2 percent). The three general baccalaureate campuses lost 8.3 percent in their constant-dollar funding; the comprehensive institution (North Dakota State University main campus) lost 4.6 percent.

The five independent institutions in the state gained 11.2 percent in real E&G revenues per student from 1977 to 1981.

State Financing of Higher Education

State and local government institutional support for public institutions of higher education in North Dakota was $134.10 per capita in 1981, 48 percent above the national average, ranking the state 4th in the nation. However, public enrollments per 1,000 population were also 47 percent above average (ranked 2nd), so the state's per-student appropriations of $3,122 (ranked 22nd) almost exactly equaled the national average of $3,099.

North Dakota appropriates $.50 per capita for student financial aid, whereas the U.S. average is $3.80 per capita. The state appropriates $1 million for interstate contracts and $.4 million for state boards and commissions.

State Tax Base and Budget

North Dakota is above average in potential tax wealth, with a tax capacity of $1,027.74 per capita (14th in the nation), 8 percent over the national average of $948.73. This capacity is the result of above-average tax capacity for general sales.

The tax effort of North Dakota is 22 percent below national average rates, with a state rank of 44th. As a result of this low effort, collected tax revenues of $809.41 per capita are 15 percent below average, ranking North Dakota 31st in the nation in tax funds available to support public services.

North Dakota has the second highest allocation of tax revenues to higher education in the country, 17 percent, well above the national average rate of 11 percent. As a result of this high allocation, appropriations for institutional support, student aid, and "other" support of $136.90 per capita are 37 percent above the national average, ranking North Dakota 5th in the nation.

If the total operating budget of North Dakota (including nontax revenues) is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and elementary/secondary education, public welfare, health and hospitals, and public services receive a proportionately smaller share.

Higher Education Enrollments

North Dakota, with an enrollment rate of 40 students per 1,000 population, is ranked 3rd in the nation in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Three of North Dakota's 40 resident students per 1,000 attend colleges out of state. Thirty-four residents per 1,000, or 85 percent, attend public institutions within the state; three per 1,000 attend state independent institutions.

The public and independent institutions of North Dakota enroll 30,188 FTE students, a very large higher education enterprise relative to the state's population. Enrollment in the public sector of 93 percent compared to enrollment in the private sector of 7 percent is a much higher ratio than the national average balance of 76 percent to 24 percent. Almost 60 percent of the state's 28,100 FTE public students are enrolled on the main campuses of the University of North Dakota and North Dakota State University.

The state is ranked 2nd in the nation in public enrollment load, with 43.0 FTE students per 1,000 population--47 percent above the national average. North Dakota has an above-average number of high school graduates, and their entrance rate to public institutions in the state is 74.0 percent compared to the national average of 62.4 percent. Also, North Dakota public institutions have a higher than average attendance by out-of-state students. The state's low retention factor indicates emphasis on lower-division education.

Institutional Finances and Characteristics

State appropriations are unevenly distributed among the public institutions of North Dakota compared to national averages. North Dakota State University receives appropriations per student 30 percent above average for comprehensive institutions; the University of North Dakota receives appropriations 7 percent below average for universities with medical programs; the three baccalaureate colleges and two two-year occupational schools receive slightly above average appropriations; and the three two-year academic colleges receive amounts 21 percent below average per student. Tuition is generally less than average at public institutions in the state, with the exception of the two-year colleges; tuition at the academic institutions is 65 percent above average, evidently to counterbalance their low share of state support. In general, the public institutions are well financed overall (near or above national averages). North Dakota State University is particularly well funded, with total educational and general revenues (excluding government contracts) per student that are 49 percent above national averages. The medical university operates with state and local appropriations 7 percent below average; the general baccalaureates operate with 5 percent less.

Public institutions have above-average expenditures for instruction per student with the surprising exception of North Dakota State University, where funding for instruction is 13 percent below average. This institution places great emphasis on research and public service, which may account for the relatively poor financing of instruction. Full-time faculty salaries are generally 5 to 10 percent below average in the state.

Four of the independent institutions in the state are underfinanced. The fifth, Standing Rock Community College, has total E&G revenues at the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 353,876
Postsecondary vocational-technical education	$ 0
State boards and commissions	$ 409,866
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 1,050,800
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

OHIO

Recent Trends

State and local appropriations to public higher education increased 38.5 percent in Ohio between 1977 and 1981. This change in state support was substantially lower than the 47.2 percent U.S. average. During the same period, the number of students in the Ohio state system was growing at above-average rates: 5.4 percent (index 110). The increased appropriations did not cover enrollment increases and inflation. Overall, the real-dollar value of state funds for higher education was reduced 6.1 percent.

Tuition increases kept pace with inflation and enrollments, gaining 1.9 percent in the public sector. Overall, total E&G revenues per student in constant dollars remained essentially constant for the four-year period. However, within this state average, two types of institutions--general baccalaureate and health professional--sustained major losses (22.9 and 34.9 percent, respectively). In both instances this was due to appropriations not keeping up with major enrollment increases.

The 32 independent general baccalaureate institutions in Ohio increased tuition slightly faster than the rate of inflation and succeeded in improving their constant-dollar E&G revenues per student by 7.1 percent.

State Financing of Higher Education

State support for higher education in Ohio in 1981 was $65.70 per capita, 34 percent below the national average. The bulk of the funds went to public institutions for general institutional support ($61.60 per capita). This is 32 percent below the national average, ranking the state 44th in the nation. Public enrollments per 1,000 were also lower than average, by 13 percent, so the state's per-student appropriations of $2,407 (ranked 45th) were 23 percent below the national average of $3,099. The state relies heavily on high tuition and revenue from other sources to achieve total E&G revenues per student equal to the national average.

Ohio appropriates $3.10 per capita for student financial aid (ranked 16th), compared to the national average of $3.80 per capita. The state appropriates $3.7 million for state boards and commissions.

State Tax Base and Budget

Ohio has a nearly average tax potential with a tax capacity of $918.44 per capita, compared to the national average of $948.73. The state has nearly average capacity for each of the major types of taxes.

The tax effort of Ohio is 14 percent below the national average, with a state rank of 36th. As a result of this lower effort, collected tax revenues of $796.14 per capita are 17 percent below average, ranking Ohio 33rd in the nation in tax funds available to support public services.

Ohio allocates 9 percent of its tax revenues to higher education, substantially below the national average rate of 11 percent. As a result of this combination of low collected revenues and a low allocation rate, appropriations for institutional support and student aid of $65.70 per capita are 34 percent below the national average, ranking Ohio 46th in the nation.

If the total operating budget of Ohio (including nontax revenues) is considered, education, public welfare, health and hospitals, and public services receive a larger share of the budget relative to national average allocations, and highways and other functions receive a proportionately smaller share.

Higher Education Enrollments

Ohio, with an enrollment rate of 31 students per 1,000 population, is ranked 31st nationally in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Nine percent fewer resident students per 1,000 enroll in higher education primarily because of the lower enrollment rates in the public sector. In addition, only one-half as many residents go to institutions out of state. Twenty-four residents per 1,000 population, or 77 percent, attend public institutions within the state; six per 1,000 attend state independent institutions.

The public and independent institutions of Ohio enroll 368,359 FTE students, a slightly less than average size higher education enterprise relative to the state's population. Enrollment in the public sector compared to enrollment in the independent sector is almost the same ratio as the national average balance, 3 to 1. The total public enrollment of 276,592 FTE students is broadly distributed among 59 institutions in the state, with the largest number (79,597) attending the state's five nonmedical universities.

The state is ranked 37th in the nation in public enrollment load, with 25.6 FTE students per 1,000 population--13 percent below the national average. The entrance rate of state high school graduates to state colleges and universities is 50.1 percent, compared to the national average of 62.4 percent. Also, Ohio has a very low in-migration of students attending state public institutions.

Institutional Finances and Characteristics

The eight public universities in the state appear to get the short end of state appropriations per student, receiving 31 to 37 percent below the average for their type of institution. The 28 two-year occupational schools also receive low state support. The three comprehensive colleges receive 21 percent below average appropriations for these types of institutions, the two-year academic colleges receive funding 4 percent below average, and the single baccalaureate college receives funds 11 percent above average.

Tuition in the state is substantially above average for all public institutions and, together with substantial private gifts and high amounts of other revenues, establishes above-average total educational and general revenues (excluding government contracts) per student for the comprehensive, baccalaureate, and two-year academic colleges. The eight public universities, however, do not make up for the low state support and total revenues remain 16 to 22 percent below the national average.

Instructional expenditures per student are below average at most public institutions in the state, but faculty salaries are nearly average for most ranks. Research expenditures per faculty member at the state's two research universities with medical programs--the University of Cincinnati and Ohio State University--are underfunded in comparison to national averages by 51 percent.

Ohio has 75 independent institutions, which generally charge less than average tuition and are underfinanced overall. The exception is the state's 32 general baccalaureate colleges, which charge tuition 22 percent above average for these types of institutions and have total E&G revenues per student 17 percent above average. Full-time faculty salaries in the independent sector are near or at the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 32,752,841
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 3,718,232
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 74,550,000

Current funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

OKLAHOMA

Recent Trends

State funding for public higher education in Oklahoma made major strides forward between 1977 and 1981, increasing by 76.2 percent--a rate 61 percent better than the national average and ranking Oklahoma 5th in the nation. At the same time, enrollments remained essentially steady. As a result, appropriation increases more than matched inflation, netting a 27.7 percent real-dollar per-pupil expansion in state funding for higher education. All categories of public institutions shared in these increases, ranging from a 13.8 percent gain at the medical research university (Oklahoma State University) to a 53.4 percent gain at the state's two-year occupational campus, Oklahoma State University Technical Institute.

Increases in revenues from tuition and fees were not commensurate with increases in inflation and enrollments, and tuition and fees, on average, shrank in value by 14.5 percent. Still, propelled by the gains in state funding, total revenues in the public sector grew by 18.4 percent, the seventh largest increase during this period in the country. Because of substantial increases in enrollment at the state's two research universities, these institutions had the lowest level of real revenue gain. Gains in the "other" professional sectors were 6 percent below average.

State Financing of Higher Education

State and local government general institutional support for public institutions of higher education in Oklahoma was $87.80 per capita in 1981, 3 percent below the national average, ranking the state 25th in the nation. Public enrollments per 1,000 population were higher than average by 8 percent, so the state's per-student appropriations of $2,757 (ranked 36th) were 12 percent below the national average of $3,099. Oklahoma fails to make up for this low funding level even with higher than average revenues from other sources.

The state of Oklahoma appropriates no funds for student financial aid. The U.S. state average for student aid is $3.80 per capita.

State Tax Base and Budget

Oklahoma is potentially a tax-rich state, with a tax capacity of $1,107.97 per capita (compared to the national average of $948.73). The state has above-average capacity in selective sales, corporate income, and farm property. The state has substantial severance tax potential.

The tax effort of Oklahoma is 19 percent below the national average, with a state rank of 49th. As a result of this high capacity and low effort, collected tax revenues of $792.76 per capita are 17 percent below the national average, ranking Oklahoma 35th in the nation in tax funds available to support public services.

Oklahoma allocates a slightly above average 12 percent of its tax revenues to higher education. This average rate of funding combined with the state's low tax revenues results in appropriations of $87.80 per capita, 12 percent below average, ranking Oklahoma 34th in the nation.

If the total operating budget of Oklahoma (including nontax revenues) is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and public services receive a proportionately smaller share.

Higher Education Enrollments

Oklahoma, with an enrollment rate of 32 students per 1,000 population, is ranked 23rd in the nation in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Residents of the state, despite very strong enrollments in the public sector in the state, are 6 percent less likely to go on for higher education. Half the usual number of residents enroll at private in-state schools or go out of state.

The public and independent institutions of Oklahoma enroll 115,701 FTE students, an average-size higher education enterprise relative to the state's population. Enrollment in the public sector compared to enrollment in the private sector is 84 percent versus 16 percent, a substantially higher ratio than the national average balance of 3 to 1. The total public enrollment of 96,723 FTE students is almost evenly distributed among the Oklahoma State University main campus, the University of Oklahoma--Norman, four comprehensive colleges, and 14 two-year academic colleges.

The state is ranked 15th in public enrollment load, with 31.8 FTE students per 1,000 population--8 percent above the national average. The state has a relatively large number of in-migrating students attending public institutions and a higher than average retention factor, which indicates the state's emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

Both research universities in Oklahoma receive well below average appropriations, Oklahoma State University obtaining state support per student 35 percent below the national average, and the University of Oklahoma receiving funds 31 percent below average for research universities without medical programs. The four comprehensive colleges receive even less support, 34 percent below average for these types of institutions. The 14 two-year academic colleges, on the other hand, receive state appropriations that are 11 percent above average.

Tuition at all public institutions in the state is well below average, as is funding from other sources. Thus total educational and general revenues (excluding government contracts) per student range from 41 percent below average at Oklahoma State to 1 percent above average at the 14 two-year academic schools. Instructional expenditures per student are consequently below average at most public institutions (except the general baccalaureates and the two-year colleges) and are 51 percent below average at Oklahoma State. Both universities also have below-average academic-support and research expenditures. Full-time faculty salaries are below average overall by 8 percent in the public sector, 15 percent below average at Oklahoma State. All of these negative funding statistics are the consequence of low appropriations coupled with low tuition.

The 16 independent institutions in the state receive educational and general revenues that are above average in most instances, particularly the state's five general baccalaureate colleges.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid $

Postsecondary vocational technical education $

State boards and commissions $

Retirement benefits (including social security) $

Fringe benefits $

Interstate contracts and reciprocity payments $

Service functions provided centrally (e.g., computer service, library, telephone, etc.) $

Centrally administered capital/debt service $

Other $

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state $

Current Funds revenues dedicated to capital purposes:

- tuition and fees $
- auxiliary enterprises $
- other $

Tuition and Fees reappropriated by the state?

Other Comments

Source: No data notes were supplied by the state higher education agency/commission.

(indexes shown in bold are based on U.S. average = 100)

OREGON

Recent Trends

Between 1977 and 1981, the 35 percent gain in appropriations to Oregon's public institutions was more than consumed by inflation and a small gain in enrollments (3.1 percent). The result was a 6.7 percent loss in real-dollar state support. All sectors except the two-year schools experienced declines. A 10.4 percent jump in tuition revenues reduced the slump in state funding to an overall loss in total revenues of 2.0 percent per student in constant dollars.

Oregon State University (research university) suffered the worst setback, with a 13.6 percent drop in the purchasing power of its revenues. Losses in four other sectors ranged from 2.9 percent (for the comprehensives) to 8.3 percent (at the baccalaureate institutions). In contrast, the academic/comprehensive two-year schools had an 18.0 percent improvement in funding during this period, the health professional center had a 10.7 percent gain, and the two-year occupational schools had a 3.5 percent increase.

State Financing of Higher Education

In fiscal year 1981, Oregon spent $105 per capita for higher education, a rate 5 percent above average. This resulted because the share of state tax revenues allocated to higher education was 10 percent larger than average. Most of these funds go directly to public institutions in the form of appropriations, and a very small amount goes to the private institutions. The remaining state funds go for "other" purposes, such as centralized library services, public broadcasting, and support of the state's coordinating commission. These "other" activities consume 3 percent of the higher education budget.

State Tax Base and Budget

Oregon is slightly above average in its capacity to raise tax funds, ranking 20th among the states. Economic activity in four of the ten tax categories is above average, and Oregon is particularly strong in general sales taxes and residential property. Its rate of taxation is 7 percent below average, largely because the state collects no general sales tax. As a result, Oregon's tax revenues were about 4 percent below average.

Higher education receives a large share of the state's budget, even though this share fell noticeably (from 13 to 10 percent) between 1977 and 1981. By contrast, health and hospitals and public welfare are low priorities and receive below-average shares of the state's budget. All other functions are funded at or above the average.

Higher Education Enrollments

The budget priority accorded higher education in Oregon is reflected in the state's high rates of enrollment. Residents of this state are 12 percent more likely to enroll in higher education than average, and only four other states (Massachusetts, California, North Dakota, and New York) have higher rates of participation. This high degree of access is achieved through the state's public system of higher education. First-time enrollment of residents is 94 percent above the average. In addition, Oregon's public institutions attract a large number of out-of-state students (index 172).

Higher education in Oregon is distinctly public in nature, with 86 percent of all students enrolled at public institutions. The private sector in the state is about 40 percent smaller than average.

The two-year sector in Oregon enrolls an unusually large proportion of public students, 43 percent. The comprehensive sector (Portland State and Southern Oregon State), by contrast, is much smaller than average. Given this greater emphasis on two-year institutions and the lesser focus on graduate enrollment, Oregon's public system of education is somewhat less expensive to operate.

Institutional Finances and Characteristics

Although Oregon provides substantial tax support per capita for higher education, high levels of enrollment in the public sector cause state funding per student to fall somewhat below the U.S. average. This is especially true for the universities and comprehensive institutions, which receive state funds that are 16 to 37 percent below average. By contrast, the baccalaureate institution (Eastern Oregon State) and the academic/comprehensive two-year campuses were funded by the state at levels 20 and 75 percent above average, respectively. The large two-year occupational sector receives 7 percent less from the state than average.

Tuition revenues are 16 percent above average overall, but revenues from other sources (except private sources and government grants and contracts) are below average. As a result, total revenues per student (excluding grants and contracts) were $4,299 in 1981, a level 5 percent below average. However, revenue profiles of the different groups of institutions were very uneven. The academic/comprehensive two-year colleges were most successful in garnering resources, collecting 72 percent more funds per student than average. The health professional and baccalaureate schools also function with above-average funding (by 12 and 11 percent, respectively). The nonmedical university (University of Oregon) was the least successful in obtaining revenues and so functions with 22 percent less funding than average for this category. In addition, Oregon State (index 91), the two comprehensive institutions (index 82), and the two specialized campuses (index 83) all operate with below-average support.

Faculty salaries increased by only 23 percent between 1977 and 1981, which compared poorly with the 33 percent gain nationally. These losses put faculty salaries in Oregon's public system at a level 7 percent below the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 8,479,995
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 726,525
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 99,235
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 6,205,367

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 1,213,669
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

(Indexes shown in bold are based on U.S. average = 100)

PENNSYLVANIA

Recent Trends

During the four years 1977 to 1981, Pennsylvania increased state appropriations to higher education only 22.4 percent, the smallest increase in the country. Although enrollment gains were slight, the pressure of 39.9 percent inflation during this period required at least this increase to maintain purchasing power. Appropriations thus lost 13.2 percent in real dollars per student over the four years. Some makeup occurred with substantial increases in tuition, resulting in a 5.9 percent gain in constant dollars per student. As a result, total E&G revenues per student in real terms declined 5.0 percent for public institutions in the state. The greatest loss, 37.1 percent, was at the Penn State University Hershey Medical Center and was due to a 20 percent increase in enrollment without compensating increases in appropriations.

State Financing of Higher Education

State and local government institutional support for public institutions of higher education in Pennsylvania was $48.20 per capita in 1981, 47 percent below the national average, ranking the state 49th in the nation. Public enrollments per 1,000 population were also substantially less than average (35 percent below), so the state's per-student appropriations of $2,523 (ranked 41st) were 19 percent below the national average of $3,099. Pennsylvania relies heavily on high tuitions and revenues from other sources to achieve total E&G revenues per student at the national average.

The state of Pennsylvania appropriated $6.50 per capita for student aid, which is 1.7 times the U.S. average of $3.80 per capita. Also, Pennsylvania appropriated $3.70 per capita for support of independent institutions. The state provides $5.00 per capita for retirement benefits ($55.7 million) and for state boards and commissions ($4.6 million). Overall, Pennsylvanians spend $36 less per capita for higher education than average.

State Tax Base and Budget

Pennsylvania has below-average potential tax wealth, with a tax capacity of $878.63 per capita as compared to the national average of $948.73. The state has below-average capacity in all categories except corporate net income and commercial property taxes.

The tax effort of Pennsylvania is 3 percent above average, with a state rank of 15th. As a result of this lower capacity and higher effort, collected tax revenues of $911.81 per capita are only 4 percent below the national average, ranking Pennsylvania 24th in the nation in tax funds available to support public services.

Pennsylvania allocates a low 8 percent of its tax revenues to higher education, compared to the national average of 11 percent. As a result of this low rate plus average revenues, appropriations for institutional support, student aid, and "other" support of $63.70 per capita are 36 percent below average, ranking Pennsylvania 48th in the nation.

If the total operating budget of Pennsylvania (including nontax revenues) is considered, elementary/secondary education and public welfare receive a larger share of the budget relative to national average allocations, and higher education, highways, health and hospitals, and public services receive a proportionately smaller share.

Higher Education Enrollments

Pennsylvania, with an enrollment rate of 28 students per 1,000 population, is ranked 40th nationally in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Fifty percent more residents per 1,000 population attend independent institutions in the state and 35 percent fewer enroll in the public sector. An average number go out of state. As a consequence of the lower enrollment in the public sector, access for residents is 18 percent below the national average.

The public and independent institutions of Pennsylvania enroll 403,874 FTE students, a slightly less than average size higher education enterprise relative to the state's population. Enrollment in the public sector is 56 percent compared to enrollment in the private sector of 44 percent, a substantially lower ratio than the national average balance of 3 to 1. The 226,985 FTE students attend 61 public institutions in the state, with the largest enrollment, 66,550, at the state's 14 comprehensive colleges and almost 70,000 at the state's 37 two-year colleges. The state's three universities enroll 80,000 students. Pennsylvania has 136 independent institutions enrolling 176,889 FTE students.

The state is ranked 50th in public enrollment load, with 19.1 FTE students per 1,000 population--35 percent below the national average. Only 35.6 percent of the state's high school graduates enter Pennsylvania's public institutions, compared to the U.S. average of 62.4 percent. Also, few out-of-state students in-migrate to attend Pennsylvania's public colleges.

Institutional Finances and Characteristics

State appropriations for public higher education in Pennsylvania are below average for each type of institution except comprehensives and "other-professional" institutions. The University of Pittsburg receives appropriations per student that are 28 percent below average, Pennsylvania State University's are 25 percent below average, and Temple University's are 21 percent below average. To offset these low appropriations, tuition at public institutions is substantially higher than average, over twice the average rate in some instances. Above-average private gifts and grants also help the University of Pittsburg and Penn State. As a result, total educational and general revenues (except government contracts) per student are above average for all public institutions with major enrollments in Pennsylvania except the 13 two-year academic colleges and the health professional sector.

Expenditures for instruction per student and academic support per faculty member are generally near or above average for public institutions, and faculty salaries are also competitive.

In the independent sector, the University of Pennsylvania charges average tuition but has a low level of private gifts and grants and other revenues, so total E&G revenues per student are 17 percent below average. The state's ten comprehensive colleges are funded at 13 percent below average, while the 52 independent baccalaureate colleges have nearly average funding. Faculty salaries are close to or above national averages.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 78,367,100
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 4,597,988
Retirement benefits (including social security)	$ 55,684,553
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 658,171
Centrally administered capital/debt service	$ 0
Other (BMS, CSC, and Comptroller's Office State College Support Service)	$ 762,865 (estimate)

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 85,600,000
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 8,675,188

Tuition and Fees reappropriated by the state? Yes*

Other Comments

* Funds collected by the 14 state-owned colleges and universities (tuition/room and board) were reappropriated to the individual institutions. All other higher education institutions were not involved in this procedure.

RHODE ISLAND

Recent Trends

State and local appropriations for public higher education in Rhode Island increased by 35.2 percent between 1977 and 1981, 25 percent less than the national average rate. At the same time, enrollment in public institutions grew 10.3 percent, a rate 2.1 times the national average. As a result, there was a 12.4 percent decrease in real-dollar appropriations per student. This decline was further exacerbated by a 9.7 decline in the real value of tuition per student. Consequently, public institutions in Rhode Island sustained an average 11.7 percent loss in total E&G revenues per student in constant dollars. The largest loss, 20.3 percent, occurred at the state's single two-year occupational college due to its major 23.4 percent increase in enrollment.

The 10 independent institutions in Rhode Island grew by 4.1 percent, increased tuition in real dollars, and managed to improve constant-dollar total E&G revenues per student by 11.2 percent.

State Financing of Higher Education

General institutional support from state and local governments for public institutions of higher education in Rhode Island was $78.30 per capita in 1981, 14 percent below the national average, ranking the state 33rd in the nation. Public enrollments were also equally below average, so the state's per-student appropriations of $3,013 (ranked 26th) were only 4 percent below the national average of $3,099.

The state of Rhode Island appropriated $4.40 per capita for student aid, which is above the U.S. average of $3.80 per capita. The state also provides $1.20 per capita to support independent institutions.

State Tax Base and Budget

Rhode Island is potentially a tax-poor state, with a tax capacity of $794.81 per capita (42nd in the nation), 17 percent below the national average of $948.73. The state has below-average capacity in all tax categories except death and gift.

The tax effort of Rhode Island is 23 percent above average, with a state rank of 6th. As a result of this combination of low capacity and high effort, collected tax revenues of $978.69 per capita are 3 percent above the national average, ranking Rhode Island 17th in the nation in tax funds available to support public services.

Rhode Island allocates 9 percent of its tax revenues to higher education, compared to the national average of 11 percent. This low rate plus average revenues results in appropriations for institutional support and student aid of $84 per capita, 16 percent below average, ranking Rhode Island 36th in the nation.

If the total operating budget of Rhode Island (including nontax revenues) is considered, public welfare receives a larger share of the budget relative to national average allocations. The other functions, including higher education, receive a proportionately smaller share.

Higher Education Enrollments

Rhode Island, with an enrollment rate of 32 students per 1,000 population, is ranked 24th nationally in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. On average, residents of this state are 6 percent less likely to go to college. This below-average access is tied to below-average rates (by 19 percent) of enrollment at the public institutions.

The public and independent institutions of Rhode Island enroll 50,628 FTE students, a very large higher education enterprise relative to the state's population. Enrollment of 49 percent in the public sector compared to enrollment of 51 percent in the independent sector is a much lower ratio than the national average balance of 3 to 1. The public enrollment of 24,671 FTE students is located in three institutions: the University of Rhode Island, 11,248; Rhode Island College, 5,971; and the Community College of Rhode Island, 7,452. The ten independent institutions in the state enroll 25,957 FTE students.

The state is ranked 36th in public enrollment load, with 26.0 FTE students per 1,000 population--12 percent below the national average. Only 36.6 percent of the state's high school graduates enter Rhode Island's public institutions, compared to the U.S. average of 62.4 percent. The state public institutions have a high retention factor, which indicates the emphasis placed on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

The University of Rhode Island receives state appropriations per student that are 9 percent below the national average for research universities without medical programs. Despite higher than average tuition, other revenues are not sufficiently high to provide total educational and general funding equal to the national average. As a result, the institution functions with total per student E&G revenues that are 11 percent below the U.S. average. Rhode Island College receives appropriations 6 percent above average and obtains total E&G revenues slightly above average for comprehensive institutions. Total funding of the Community College of Rhode Island is only slightly below the average for two-year occupational colleges.

Rhode Island College has the lowest relative expenditures for instruction but very high academic support expenditures. The University of Rhode Island has above-average expenditures for all functions except research per faculty member. Full-time faculty salaries in the public sector are close to or above the national average.

The state has 10 independent institutions, and Brown University is the best funded, with funding 3 percent above the average for private universities with medical programs. The three independent baccalaureate colleges have the lowest funding, 24 percent below the national average for these types of institutions. Faculty salaries at Brown are 14 percent above the national average, and salaries in the private sector are generally good in Rhode Island.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 4,211,793
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 0
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 5,922,475
- other	$ 0

Tuition and Fees reappropriated by the state? No

SOUTH CAROLINA

Recent Trends

State and local appropriations to higher education were increased significantly in South Carolina between 1977 and 1981. Increasing by almost 70 percent better than the national average, state and local support reached $336 million in 1980-81, enough to cover both inflation and unusually large enrollment gains of 11.2 percent. In addition, the boost in state support provided a 15.0 percent expansion in appropriations measured in constant dollars per student. Tuition also increased faster than enrollment growth and inflation, netting a 17.5 percent gain.

Overall, fueled by the increase in state funding supplemented by tuition, the operating revenues of the public sector (excluding grants and contracts) expanded by almost 16 percent between 1977 and 1981 in inflation-adjusted dollars per student. All sectors shared in these gains. The two-year sectors had the largest improvements: 42 percent in the academic/comprehensive sector and 37 percent in the occupational sector. The health professional school (Medical University of South Carolina) had the next greatest increase, 34 percent in total revenues per student in constant dollars. All other sectors had revenue gains between 11 and 17.5 percent except the research university without medical programs (Clemson University). This sector had the smallest gain in operating funds, 7.5 percent. Still, that gain was far better than the U.S. average for similar institutions.

The private sector, propelled by tuition gains and a nearly 5 percent drop in enrollments, increased its operating base by 7.2 percent (after adjustment for inflation). All categories of private institutions shared in these improvements except the specialized institutions.

State Financing of Higher Education

The state spent $111 per capita for higher education in FY81, a level 11 percent above the average. Ninety-seven percent of these expenditures are allocated to public institutions, primarily in the form of direct institutional support. Through student aid, 3 percent of the state's funds for higher education support students enrolled at private institutions. There is no similar aid program for students in the public sector.

State Tax Base and Budget

South Carolina collects $682 per capita in state taxes, a level 29 percent below the norm. The comparatively low revenue results from a tax capacity 25 percent below average and is compounded somewhat by a state tax effort that is 5 percent below average. South Carolina's tax capacity is well below average in all categories. Only one other state (Mississippi) has a lesser base of taxable economic activity to draw upon. The state's tax structure emphasizes income tax, both individual and corporate, and nationally ranks 15th and 14th, respectively, in tax effort with these sources.

Elementary/secondary education receives the largest portion (30 percent) of direct general expenditures by state and local governments in South Carolina. Health and hospitals follow at 14 percent. The share going to higher education, 12 percent of the budget, is 33 percent above average and places South Carolina's per-capita expenditures for higher education above national levels--a considerable achievement in view of the state's weak overall revenue picture.

Higher Education Enrollments

South Carolina residents participate in higher education in below-average numbers. They attend their own public institutions at near-typical rates, but fewer than average attend private institutions in-state or institutions out of state. At the same time, in-migration to South Carolina's public institutions is 20 percent above average. Total enrollment in public institutions (relative to the state population) is just below national levels and, if not for a comparatively low retention rate, would be above average. South Carolina has 28 FTE students per 1,000 population enrolled in its public institutions.

Universities enroll 36 percent of the students in the public sector, while the number of students in two-year occupational institutions is greater than the total number enrolled in comprehensive and baccalaureate institutions. In the private sector, half (51 percent) the enrollment is concentrated in baccalaureate institutions. Overall, South Carolina's public sector enrolls 79 percent of the higher education students, slightly more than the U.S. average.

Institutional Finances and Characteristics

State and local appropriations per student for public higher education in South Carolina are 25 percent above average, and the state's public institutions rely more heavily than usual on these revenues, obtaining 66 percent of their funds from this source. Despite the fact that tuition revenues are somewhat below average, as a group these institutions do better than average in total E&G revenues per student (excluding government contracts). On average, the public sector functions with 15 percent more per student in general operating funds (excluding government grants and contracts), and all sectors except the medical university (index 84) and the occupational two-year schools (index 87) have above-average revenues. For instance, Clemson University (nonmedical research university) has 53 percent more revenues per student than the average for institutions in its group, primarily because of above-average state funding. The academic/comprehensive two-year schools (index 121) and the Medical College of South Carolina (index 118) are next in relative funding. The comprehensive institutions receive funds at 8 percent above the average, and the public general baccalaureates are funded at 5 percent above average. In general, given low state revenues, state funding for higher education in South Carolina is impressive.

The private sector in South Carolina is not financed as well as the public sector, comparatively speaking. Total E&G revenues per student (excluding government contracts) are nearly 40 percent below the norm for the private sector as a whole. Tuition revenues per student are 35 percent below average, even though dependence on tuition, which represents nearly 60 percent of all revenues, is above average. There is a total of 61 institutions in South Carolina, of which 33 are public. Clemson is small for its type, while the University of South Carolina is larger than average for schools with similar missions.

Faculty salaries in public institutions are below average, and particularly so in the two-year institutions and health professional school. However, consonant with the recent gains in revenues for higher education, faculty in South Carolina made major strides forward from 1977 to 1981. Their salaries climbed 47 percent at a time when their peers elsewhere had gains of only 33 percent. Faculty salaries in the private sector average 5 to 20 percent lower than national rates for similar types of institutions.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 9,987,229
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 718,007
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 570,750
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

The portion of required fees labeled "tuition" is required by law in most instances to be remitted to the State Treasurer for debt service. A significant proportion of student fees is used for capital expenditure and debt services.

(indexes shown in bold are based on U.S. average = 100)

SOUTH DAKOTA

Recent Trends

The 41.6 percent increase in appropriations in South Dakota was less than the national average for the four-year period from 1977 to 1981. This was particularly harmful, for at the same time there was a gigantic 9.4 percent increase in public enrollments, 92 percent above the national average. Enrollment at South Dakota School of Mines and Technology grew 38.2 percent. With inflation at 39.9 percent during this period, public state institutions lost an average 7.5 percent in appropriations per student in constant dollars.

Except for the two-year occupational college at Springfield, South Dakota schools failed to increase tuition to offset inflation, losing an average of 8.4 percent in real dollars per student. Despite these declines the comprehensive institutions[*] (South Dakota State University and the University of South Dakota main campus) managed to find other funds to maintain total E&G revenues per student in constant dollars nearly 2 percent above the national level. The three general baccalaureate institutions lost 10.7 percent in real total revenues per student.

South Dakota's six independent baccalaureate institutions increased tuition to offset inflation and gained 5.7 percent in real total revenues per student.

State Financing of Higher Education

State and local government institutional support for public institutions of higher education in South Dakota was $71.60 per capita in 1981, 21 percent below the national average, ranking the state 42nd in the nation. Making the situation worse were public enrollments at the national average, so the state's per-student appropriations of $2,443 (ranked 44th) were 22 percent below the national average of $3,099. South Dakota makes extensive use of student tuition to boost total E&G revenues per student to the national average.

South Dakota appropriates $.50 per capita for student aid, well below the U.S. average of $3.80 per capita. The state also appropriates $7.00 per capita ($4.9 million) to support its area vocational-technical institutes, which enroll 2,467 FTE students, and for state boards and commissions and retirement benefits.

State Tax Base and Budget

South Dakota has below-average tax potential, with a tax capacity of $855.62 per capita (36th in the nation), 10 percent below the national average of $948.73. The state has below-average capacity in individual and corporate income and in residential and commercial property.

The tax effort of South Dakota is 12 percent below average, with a state rank of 34th. As a result of this combination of low tax capacity and low tax effort, collected tax revenues of $775.06 per capita are 19 percent below average, ranking South Dakota 36th in the nation in tax funds available to support public services.

South Dakota allocates a nearly average 11 percent (index 98) of its tax revenues to higher education. This average rate plus low tax revenues results in appropriations of $79.20 per capita for institutional support, student aid, and "other" support, 21 percent below average, ranking South Dakota 38th in the nation.

If the total operating and capital budget of South Dakota (including nontax revenues such as student tuition) is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and public welfare and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

South Dakota, with an enrollment rate of 34 students per 1,000 population, is ranked 16th in the nation in the number of residents attending college anywhere. The nation also averages 34 students enrolled per 1,000. Average numbers of residents attend college in the state as well as out of state.

The public and independent institutions of South Dakota enroll 27,625 FTE students, a slightly above-average size higher education enterprise relative to the state's population. Enrollment in the public sector as compared to enrollment in the independent sector is 73 percent versus 27 percent, near the national average balance. Over half the 20,233 FTE public enrollment is at the comprehensive institutions. Over 5,000 students are enrolled at the state's three general baccalaureate colleges.

The state is ranked 26th in public enrollment load, with 29.3 FTE students per 1,000 population--the same as the national average. The state has 21 percent more high school graduates per capita than average; however, only 37.4 percent enter South Dakota's public higher education system, compared to the U.S. average entrance rate of 62.4 percent. South Dakota has a high in-migration of nonresidents who attend the state's public institutions. Also, the state public system has a high conversion factor, indicating that more students than average attend full time rather than part time.

Institutional Finances and Characteristics

State appropriations are disproportionately allocated among the various types of institutions in South Dakota relative to national averages. The two comprehensive institutions--the University of South Dakota and South Dakota State--receive appropriations equal to the national average for these types of institutions. The three baccalaureate colleges and South Dakota School of Mines and Technology (professional) receive appropriations that are over 30 percent below average for their respective types of institutions. The two universities also collect above average tuition revenues, so their total educational and general revenues (excluding government contracts) per student are 35 percent above average. The three baccalaureate colleges charge slightly higher than average tuition, but total funding is still 14 percent below average. The School of Mines receives very high "other revenues," which boost total funding to nearly the national average. Faculty salaries in the public sector are 17 percent below average.

The state's six independent baccalaureate colleges charge nearly average tuition and have total E&G funding that is 12 percent below average. Faculty salaries at these six schools are 10 percent below average.

---

[*] If first-professional medical degrees were included in the count of doctoral degrees, the University of South Dakota main campus would be classified as a university with medical programs rather than a comprehensive institution.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 366,683
Postsecondary vocational technical education	$ 3,727,059 (2467 FTE)
State boards and commissions	$ 836,031
Retirement benefits (including social security)	$ 302,904
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0
Tuition and Fees reappropriated by the state? *	

Other Comments

* Expenditure authority is granted for tuition collected.

(Indexes shown in bold are based on U.S. average = 100)

TENNESSEE

Recent Trends

State and local funding for public higher education in Tennessee fell by nearly 4 percent between 1977 and 1981 in inflation-adjusted dollars, because the 44.3 percent increase in appropriations was overridden by inflation and a larger than average gain in enrollments. Real-dollar tuition revenues also lost ground, falling 9.0 percent. As a result, the total operating revenues of the public sector were reduced 1.6 percent in constant dollars per student. Most sectors of public institutions showed reductions in their real operating budgets, except Memphis State University and the comprehensive sector, which had gains of 7.8 and 5.8 percent, respectively. The two-year occupational schools were hardest hit, and constant-dollar revenues per student dropped 15.4 percent in this sector. Other sectors had losses ranging from 5 to 6 percent.

During the same period, the private sector had a small overall loss in spending power per student of 1.5 percent. However, the patterns of funding among specific sectors varied significantly. The losses (and they were significant) in purchasing power were restricted to the two-year sector. The two largest categories of private institutions, the baccalaureates and the medical research universities, both had small gains (of from 3 to 4 percent) in their real-dollar spending base.

State Financing of Higher Education

Tennessee spends $66 per capita for higher education, a level 34 percent below average and 45th among the states. Of those expenditures, 92 percent goes toward general institutional support, 2 percent goes to student aid, and the remaining 6 percent is allocated to indirect support (primarily for postsecondary vocational education). Just about all (98 percent) of the state's support to higher education is channeled to the public sector, with only a small share of state funds aiding students attending both public and private institutions.

State Tax Base and Budget

Tennessee falls below the national average in both tax capacity and tax effort. Accordingly, state and local tax revenues per capita of $631 are 34 percent below typical levels, placing Tennessee next to last among the states in the funding of public services. The state ranks 48th in overall tax capacity and does not exceed average capacity in any individual tax category, although Tennessee's tax effort is relatively high with respect to general sales and licenses, and death and gift taxes. The major revenue source in the state is general sales taxes, which, along with selective sales and property taxes, account for about 85 percent of total revenues.

Health and hospitals (index 144), highways (index 111), and higher education (index 111) are priority state functions in Tennessee, and public welfare (index 85), "other" (index 71) miscellaneous functions, and elementary/secondary education (index 93) receive less funding than is typical. Higher education continues to be a preferential state activity, with its share of the state budget increasing from 1977 to 1981.

Higher Education Enrollments

Residents of Tennessee attend higher education institutions at a rate of 28 students per 1,000 population, 12 percent below national norms. These low participation rates apply to Tennessee students attending public, private, and out-of-state institutions. (If enrollment in the postsecondary vocational-education sector were included, these rates would be higher.) These below-average attendance rates combined with below-average enrollment of out-of-state students in public institutions result in a total enrollment in the public sector that is 14 percent below average. Tennessee has 25 FTE students per 1,000 in its public system, compared to the national profile of 29 per 1,000.

On the other hand, out-of-state enrollments in Tennessee's private institutions are 60 percent above average, compensating for low resident enrollment and creating an average-size private sector. Enrollments in Tennessee are therefore somewhat more oriented toward the private sector than is typical.

Public enrollments are concentrated in the comprehensive institutions (38 percent), followed by the two universities (35 percent) and the two-year colleges (25 percent). A slightly higher than average proportion (9 percent) of students is studying at graduate levels. Private enrollments are highly concentrated in baccalaureate institutions--54 percent. Between 1977 and 1981, public enrollments grew significantly but at rates below those in the private sector, 7.3 percent versus 13.7 percent, respectively. At 161,056 FTE students, Tennessee's total enrollment is the 18th largest in the nation.

Institutional Finance and Characteristics

Tennessee's public colleges and universities are funded at rates below the national average. Although attendance at the public sector was 14 percent below average in 1981, state funding at 33 percent below average was even lower, creating a level of state funding that, at $2,387 per student, was 23 percent below national rates. This profile worsened from 1979, when the state's public sector was 13 percent behind. All categories of public institutions are underfunded by the state, at rates between 11 and 52 percent. As was indicated previously, Tennessee is among the poorest states in the United States. Although Tennessee allocates an above-average share of tax revenues to higher education, state support per student is still below the national average. And below-average state support is coupled with low tuition rates. If total E&G revenues per student (excluding government contracts) are used as the measure, public institutions in Tennessee receive an average of $3,567 per student, a level 21 percent below U.S. averages.

Within the public sector, no sector is funded at the average for comparable institutions; the academic/comprehensive two-year institutions come the closest. The medical research university (University of Tennessee--Knoxville) operates with funds 53 percent below average, the nonmedical university (Memphis State) is funded at 22 percent below average, and the University of Tennessee Health Science Center is funded at 40 percent below average. The eight comprehensive institutions operate with 12 percent fewer funds per student than similar schools.

Funding in the major segments of private higher education in Tennessee is also below average. In the largest sector, the private baccalaureates, total funding is 15 percent below average. In part, this lower funding is due to the lower proportion of revenues coming from tuition.

Reflective of these lower operating budgets, faculty salaries are generally below average in both the public and private sectors. Tennessee's 23 public institutions are generally larger than average, while the 54 private institutions are typically smaller than similar institutions elsewhere.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,143,282
Postsecondary vocational technical education	$ 16,062,431
State boards and commissions	$ 2,785,068
Retirement benefits (including social security)	$ 0
Fringe benefits	$ *
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 4,348,941
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

* Retirement benefits are appropriated centrally but are reported in state appropriations by the institution on the HEGIS finance form.

(Indexes shown in bold are based on U.S. average = 100)

TEXAS

Recent Trends

Public higher education in Texas received an increase of 60.3 percent in state funds between 1977 and 1981. During the same period, public enrollments surged ahead by 8 percent, but the increase in state appropriations was more than sufficient to cover both enrollment growth and inflation. As a consequence, state funding for public higher education in Texas increased by 6.1 percent during the period, even after adjustment for inflation and enrollment gains. Tuition revenues also showed a major improvement, increasing 3.1 percent in real dollars per student. Reflecting these gains in state support and tuition collections, total E&G revenues increased by 6.5 percent in real dollars per student, a rate that ranked Texas 20th among the states.

These public sector gains, however, were not evenly distributed among the different types of institutions. The greatest gains were posted at the medical university (University of Houston central campus), where inflation-adjusted revenues increased by nearly 27 percent per student. Other public institutions that gained purchasing power included the health professional institutions (11.5 percent), the five nonmedical universities (9.8 percent), the baccalaureates (4.2 percent), the comprehensive institutions (2.4 percent), the academic two-year schools (1.7 percent), and the medical research university, Texas A&M (1.6 percent). There were decreases in real-dollar revenues in three public sectors, including extremely heavy ones for the other professional schools (63.8 percent), a drop of 8.7 percent at the University of Texas--Austin, and a loss of 1.5 percent at the two-year occupational schools.

State Financing of Higher Education

In 1981, Texas provided funding to support higher education that was approximately 14 percent higher than the national average. The $115 per capita for higher education is not surprising given the inherent taxable wealth of the state. It is impressive, however, given the state's low tax levels and the resulting lower tax revenues, which are 20 percent below average. The state's support for higher education is above average because it allocates a larger than average share of its budget to this state function.

The majority of higher education dollars in Texas support public institutions directly; of the $115 per capita designated for higher education, $107 is given to public institutions. The remaining $8 is spread across student aid, private institutional aid, and "other" functions.

State Tax Base and Budget

Texas is the fourth-richest state in the nation in terms of taxable economic activity, with a total tax capacity 23 percent above average. The state has above-average capacity in 9 of the 10 potential tax categories, the exception being residential property. Texas, however, has very low tax rates (only Nevada has a lower rate). Despite its above-average tax capacity, Texas is above average in tax effort in only one category: licenses. The state has no income tax (neither individual nor corporate), relatively low property tax levels, and low sales tax rates. As a consequence, the state collects 36 percent less in tax revenues than its strong tax capacity would yield at average tax rates. Because the state begins with a strong tax capacity, actual tax revenues are only 20 percent below average.

A larger than average share of the Texas state budget goes to each category except public welfare and the "other" miscellaneous categories; public services receives an average share. Higher education received 13 percent of the budget in Texas in 1981, a slight drop from 1977--still a very favorable share in comparison to the 9 percent national average.

Higher Education Enrollments

Thirty-three of every 1,000 Texas residents are enrolled full time in higher education, a level nearly equivalent to the national average. These access levels are provided principally through the public sector, as only a small proportion of students are enrolled in private institutions. Only a very small number of Texans go out of state for higher education. (Since fewer than 1 per 1,000 go out of state, the number shown in this report is 0.)

The public sector in Texas accommodates 7 percent more FTE students than average. Although the state's rate of high school graduations is below average, large numbers of first-time students and nonresidents create a pool of first-time students 13 percent larger than average. Total attendance levels are further increased by above-average numbers of full-time students. In sum, the state's public institutions enroll 32 FTE students per 1,000 residents versus the national rate of 29 per 1,000.

The structure of higher education in Texas is fairly similar to the national pattern, though there is a slightly greater emphasis on the university and comprehensive level. As a consequence, the proportion of students enrolled at the graduate level is 24 percent above average. This creates additional funding requirements for Texas as compared to other states. But the larger average size of its institutions in the public sector reduces costs to some degree.

Institutional Finances and Characteristics

In the public sector in Texas, state appropriations and enrollments are both above average, and state support per student 9 percent above average. This support is unevenly distributed to the various categories of public institutions. State funding is below average by 5 percent at the nonmedical research university (Universtiy of Texas--Austin) and by 17 percent at the comprehensive institutions. At the academic two-year schools, it is 4 percent below average, and at the other professional and specialized institutions, it is 15 percent below. At the other universities, state funding is 5 to 15 percent above average. It is almost 50 percent above average at the public health professional institutions.

Tuition revenues collected by public institutions in Texas are overall nearly 40 percent lower than the U.S. average. Every category of public institution (except the academic two-year schools) follows this pattern, with most collecting tuition between 40 and 60 percent below average. By contrast, revenues from private gifts and other sources are above average by approximately 25 and 65 percent, respectively. Revenue patterns, however, vary by sector.

The combined effect is a level of E&G revenues per student that is 5 percent above the U.S. average. Five sectors are funded at above-average rates: the medical research university (Texas A&M), the five universities (without medical programs), the general baccalaureates, the two-year occupational institutions, and the health professional schools. Three other sectors, the University of Texas--Austin, the University of Houston central campus, and the academic two-year schools, are within 10 percent of the average. Only two sectors, the comprehensives and other specialized campuses, are substantially below average, at 18 and 25 percent, respectively.

Gains in funding between 1977 and 1981 were not reflected by gains in faculty salary. Salaries in Texas grew 20 percent more slowly than the national average in this period. In total, salary levels statewide are 9 percent below average in the public sector. In the private sector, they are 5 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 15,156,884
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 8,561,606
Retirement benefits (including social security)	$ *
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 62,218,562

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

* It is not possible to identify the amount appropriated for higher education employees.

Source: Coordinating Board, Texas College and University System

(Indexes shown in bold are based on U.S. average = 100)

UTAH

Recent Trends

Utah increased appropriations 52.3 percent during the four years 1977 to 1981, a pace slightly better than the U.S. average, and these increases were fairly evenly distributed among the various types of public institutions. Public enrollments in the state grew by 8.5 percent, well above the national average. These enrollment increases, when coupled with 39.9 percent inflation during the period, prevented any real increase in appropriations per student in constant dollars. Real gains in tuition per student and revenues from other sources resulted in increases in the constant-dollar value of total E&G funds for the University of Utah (17.3 percent), the two general baccalaureate colleges (7.7 percent), and the two occupational colleges (12.3 percent).

The one independent general baccalaureate institution gained 17.5 percent in tuition per student and 20.7 percent in total revenues in constant dollars. (Brigham Young University, an independent nonmedical university, has been excluded from the analysis because of incomplete HEGIS surveys. Consequently, data for the independent sector will be underestimated and this should be considered when interpreting the data.)

State Financing of Higher Education

State and local government support for public institutions of higher education in Utah was $105.90 per capita in 1981, 17 percent above the national average, ranking the state 15th in the nation. However, public enrollments were equally above average, so the state's per-student appropriations of $3,229 (ranked 20th) were only 4 percent above the national average of $3,099.

Utah provides no state appropriations for student financial aid, compared to the U.S. average of $3.80 per capita. The state provides $1.00 per capita for operation of state boards and commissions and for interstate contracts and reciprocity payments.

State Tax Base and Budget

Utah has below-average tax potential, with a tax capacity of $815.73 per capita (40th in the nation), 15 percent below the national average of $948.73. The state has below-average capacity in general and selective sales, individual and corporate income, and residential and commercial property.

The tax effort of Utah is at the national average, with a state rank of 19th. As a result of this combination of below-average capacity and average effort, collected tax revenues of $825.22 per capita are 14 percent below average, ranking Utah 30th in the nation in tax funds available to support public services.

Utah allocates a high 13 percent of its tax revenues to higher education, compared to the national average of 11 percent. This high rate plus lower than average revenues results in appropriations of $107.20 per capita for institutional support and "other" support, 7 percent above average, ranking Utah 17th in the nation.

If the total operating budget of Utah (including nontax revenues) is considered, higher and elementary/secondary education and highways receive a larger share of the budget relative to national average allocations. Public welfare, health and hospitals, and public services receive a proportionately smaller share.

Higher Education Enrollments

Utah, with an enrollment rate of 30 students per 1,000 population, is ranked 33rd nationally in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. One of Utah's 30 resident students per 1,000 population attends a college out of state. Twenty-nine residents per 1,000 population, or 97 percent, attend public institutions within the state.

The public and independent institutions of Utah enroll 50,299 FTE students, a very large higher education enterprise relative to the state's population. Enrollment in the public sector is 96 percent compared to enrollment in the private sector of 4 percent, a higher ratio than the national average balance of 76 to 24 percent. The state enrolls its 48,254 FTE public students in nine institutions, with 19,022 students attending the medical research university (University of Utah).

The state is ranked 14th in public enrollment load, with 32.8 FTE students per 1,000 population--12 percent above the national average. Utah has a high in-migration of nonresident students who attend public institutions in the state. Public institutions in the state also have a high conversion factor, indicating that more students than average are enrolled full time rather than part time.

Institutional Finances and Characteristics

State appropriations are inconsistently allocated among the public institutions in Utah relative to national averages. The nonmedical university (Utah State University) receives appropriations 3 percent above average, while the medical research universitiy (University of Utah) receives appropriations 21 percent below average. Appropriations at the two-year academic colleges are 43 percent above average; at the two-year occupational colleges, they are 10 percent below average. Only the two-year academic colleges charge above-average tuition, so total educational and general revenues exceed the national average for this type of institution by 44 percent. The other public institutions operate with total funding near the national average, relying heavily on funding from "other" revenues.

The public institutions in Utah spend more than average for instruction per student, except at the two research universities (with medical and without medical programs). Academic support per faculty member is above average except at the medical research university. Faculty salaries are generally near the national average except, surprisingly, at the state's three two-year academic colleges, which are the best funded. At these three institutions faculty salaries average 14 percent below the national norm.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 980,464
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 929,899
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 95,753
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

Other Comments

Brigham Young University, an independent nonmedical university, has been excluded from the analysis because of missing HEGIS surveys.

(Indexes shown in bold are based on U.S. average = 100)

VERMONT

Recent Trends

During the four-year period from 1977 to 1981, appropriations were increased at the comprehensive college* (University of Vermont and State Agricultural College) by 30.7 percent and at the three general baccalaureate colleges by 39.5 percent--both increases being substantially below the national average. However, although there was enrollment growth of 2.2 percent at the university, enrollment declined sharply (11.3 percent) at the baccalaureate institutions. Thus the real-dollar value of appropriations per student adjusted for inflation shrank by 8.6 percent at the university and grew by 12.4 percent at the four baccalaureate colleges. The baccalaureate institutions also substantially increased tuition, so their total revenues per student in constant dollars increased 13.1 percent from 1977 to 1981. The university also improved the real value of tuition but at a lesser rate, and managed to increase real E&G revenues per student by 5.5 percent. Funding changes in the two-year sector were mixed, with gains of 8.8 percent for the academic/comprehensive institutions and losses of 23.0 percent in the occupational sector.

The four independent comprehensive institutions in Vermont substantially increased tuition and improved their real total funding per student by 30.2 percent. The six independent general baccalaureate institutions failed to increase tuition to offset inflation and gained only 3.5 percent in real revenues per student during the four years.

State Financing of Higher Education

General institutional support from state and local governments for public institutions of higher education in Vermont was $44.80 per capita in 1981, 51 percent below the national average, ranking the state 50th in the nation. Public enrollments were essentially at the national average, so the state's per-student appropriations of $1,616 (ranked 51st) were 48 percent below the national average of $3,099. Vermont makes extensive use of student tuition and private gifts and grants to put total E&G revenues per student above the national average.

The state of Vermont appropriates $9.40 per capita for student financial aid, the 3rd highest rate in the country and almost 2.5 times the national average of $3.80 per capita. The state also provides $4.00 per capita for postsecondary vocational-technical institutes (156 FTE students), state boards and commissions, and interstate contracts.

State Tax Base and Budget

Vermont has low tax potential, with a tax capacity of $801.49 per capita (41st in the nation), 16 percent below the national average of $948.73. The state has below-average capacity in individual and corporate income and commercial property.

The tax effort of Vermont is 4 percent above average, with a state rank of 14th. As a result, collected tax revenues of $834.86 per capita are 13 percent below average, ranking Vermont 29th in the nation in tax funds available to support public services.

Vermont allocates a low 7 percent of its tax revenues to higher education, compared to the national average 11 percent. This low rate plus low collected revenues results in appropriations of $57.70 per capita for institutional support, student aid, and "other" support--42 percent below the national average and ranking Vermont 50th in the nation. Only New Hampshire appropriates less funding per capita for higher education.

If the total operating budget of Vermont is considered, higher education and highways receive a larger share of the budget relative to national average allocations, and health and hospitals and public services receive a proportionately smaller share.

Higher Education Enrollments

Vermont, with an enrollment rate of 29 students per 1,000 population, is ranked 38th in the nation in the number of residents attending college anywhere. Residents of this state are 15 percent less likely to go on to college, despite their above-average rates of enrollment at out-of-state schools and at independent institutions in the state.

The public and independent institutions of Vermont enroll 25,572 FTE students, a very large higher education enterprise relative to the state's population. Enrollment in the public sector compared to enrollment in the independent sector is 55 percent versus 45 percent, a much smaller ratio than the national average balance of 3 to 1. The 14,189 FTE public students are enrolled in six institutions, with 9,289 students attending the University of Vermont and State Agricultural College. The state's 11,383 FTE independent students attend 15 institutions.

The state is ranked 29th in public enrollment load, with 27.7 FTE students per 1,000 population--6 percent below the national average. Vermont has an above-average number of high school graduates per capita, but only 25.1 percent enter public higher education in the state (compared to the national average of 62.4 percent). Vermont has a very high in-migration of nonresidents who attend public institutions in the state. Public institutions have a high retention factor, which indicates the state's emphasis on upper-division, graduate, and professional education. They also have a high conversion factor, indicating that more students than average are enrolled full time rather than part time.

Institutional Finances and Characteristics

The University of Vermont and State Agricultural College receives state appropriations that are 41 percent below average for a comprehensive institution. However, by charging tuition four times the average, securing private gifts and grants over nine times above average, and receiving other revenues over five times above average, the universtiy succeeds in obtaining total educational and general revenues per student that are 73 percent above average. Expenditures for all functions at the university are well above average. Faculty salaries are slightly below average. The three public general baccalaureate colleges receive low levels of state support and charge twice the average tuition for this type of institution.

Vermont has 15 independent colleges, which charge well above average tuition and are all well funded, with the exception of two special schools. Instructional expenditures per student are average, with faculty salaries close to or above average. The comprehensive colleges fund public services per faculty member at 20 times the national average.

---

*If first-professional medical degrees were included in the count of doctoral degrees, the University of Vermont and State Agricultural College would be classified as a university with medical programs rather than a comprehensive institution.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 4,841,400
Postsecondary vocational technical education	$ 133,152 (156 FTE)
State boards and commissions	$ 1,497,328*
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 155,345
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 3,694,180 (estimate)

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 710,000
- auxiliary enterprises	$ 3,158,400**
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

* Part of this amount is for the Vermont State Colleges which includes systemwide services such as computing which are not readily separated from system administration.

** $506,000 at the University of Vermont for debt service on university gym and library. $204,000 at Vermont State Colleges for repairs, renovations or additions to capital facilities.

(indexes shown in bold are based on U.S. average = 100)

VIRGINIA

Recent Trends

Virginia provided a major boost in its support to public higher education with a 76.8 percent increase in state and local appropriations between 1977 and 1981. Only three states exceeded this gain. This increase was 1.6 times the national rate and covered both inflation and a 12.1 percent increase in enrollments. As a consequence, state funding grew in real dollars per student by 12.8 percent, an increase that ranked 11th in the nation. All sectors shared in this growth, led by the medical research university (University of Virginia), which made net gains of 32.8 percent.

Except for the medical and nonmedical research universities (University of Virginia and Virginia Polytechnic Institute and State University), revenues from tuition did not keep up with inflation and enrollment changes. Overall in the public sector, net tuition revenues per student fell 8.1 percent. Still, the net gain in total E&G revenues per student was a healthy 7.1 percent, more than four times the norm, thus ranking Virginia 19th nationally in this category. The medical research university and the medical university made major real-dollar gains in total E&G revenues per student of 27.0 and 19.7 percent, respectively. The state's two-year academic and occupational schools lost slightly in real total revenues per student.

The private sector did well overall, with a 5.0 percent increase in real total revenues per student, a rate far better than the national one.

State Financing of Higher Education

Overall state funding for higher education in Virginia was $96 per capita in 1981, a level 4 percent below average. Ninety-six percent of these funds went to public institutions ($92 per capita), a level exactly at the national average. Virginia ranked 23rd in the nation. Public enrollments were 7 percent above average, so the state's per-student appropriations of $2,918 (ranked 29th) were 6 percent below the national average of $3,099. Higher than average tuition improved total funding slightly to 4 percent below average.

The state of Virginia appropriates $2.00 per capita for student financial aid, compared to the national average rate of $3.80 per capita. The state appropriates $.50 per capita for support of independent institutions and $2.00 per capita for state boards and commissions and various service functions.

State Tax Base and Budget

Virginia has an average tax potential, with a tax capacity of $899.06 per capita (30th in the nation), 6 percent below the national average of $948.73.

The tax effort of Virginia is low, 12 percent below the national average, with a state rank of 32nd. This combination of nearly average capacity and low effort results in collected tax revenues of $794.18 per capita, 17 percent below average, ranking Virginia 34th in the nation in tax funds available to support public services.

Virginia allocates a high 13 percent of its tax revenues to higher education, compared to the national average 11 percent. This high rate combined with low revenues results in appropriations for institutional support and student aid of $95.60 per capita, 4 percent below average, ranking Virginia 27th in the nation.

If the total operating budget of Virginia (including nontax revenues) is considered, higher education and highways receive a larger share of the budget relative to national average allocations. Public welfare and health and hospitals receive a proportionately smaller share.

Higher Education Enrollments

Virginia, with an enrollment rate of 31 students per 1,000 population, is ranked 29th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. Average numbers of residents attend public institutions in the state and an average number also attend out-of-state institutions. However, only half the average number of residents attend private institutions in the state.

The public and independent institutions of Virginia enroll 199,552 FTE students, a nearly average size higher education enterprise relative to the state's population. Enrollment in the public sector compared to enrollment in the independent sector is in an 84 to 16 percent ratio, much higher than the national average balance of 3 to 1. The public enrollment of 168,399 FTE students is broadly distributed among 39 institutions, with 49,861 enrolled at the state's seven comprehensive colleges and 43,619 enrolled at 14 two-year academic institutions. The state has 30 independent institutions, 20 of which are general baccalaureate colleges.

The state is ranked 18th in public enrollment load, with 31.4 FTE students per 1,000 population--7 percent above the national average. Only 37.7 percent of the state's high school graduates enter public institutions in the state, compared to the national average of 62.4 percent. An above-average number of nonresidents attend public institutions in the state. Public institutions have a high retention factor, which indicates the state's emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

Virginia has 39 public institutions, generally better funded than average except for the comprehensive and two-year colleges. The state's three universities are all well funded, particularly the medical university (Virginia Commonwealth University), which receives total educational and general revenues (excluding government contracts) per student that are 48 percent above the national average for institutions in its category. The seven comprehensive colleges receive appropriations that are 23 percent below average, which they attempt to compensate for by charging higher than average tuition. Nevertheless, their total E&G revenues per student are still 16 percent below average. The two-year colleges, with below-average state support, secure total E&G funding per student that is 22 percent below average.

Instructional expenditures per student are above average at the state's universities and below average for the other public institutions. Academic support per faculty member is above average except at the comprehensive colleges. By sector, faculty salaries are approximately 10 percent below the national averages except at the state's two-year colleges where they are 14 to 21 percent lower.

Most students in the private sector are enrolled at the state's four comprehensive or twenty baccalaureate colleges, which are well funded. Charging slightly below-average tuition, these institutions have strong programs for private gifts and grants and other revenues. Instruction and academic support expenditures are at the national average, expenditures for research per faculty member are low, and expenditures on public service per capita are high. For the sector as a whole, faculty salaries are 13 percent below the national average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 10,642,500
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 5,788,775
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 571,513
Centrally administered capital/debt service	$ 0
Other (Eminent Scholars Program and Maintenance of Excellence Program)	$ 1,969,500

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 14,000,000 (estimate)
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 0
Tuition and Fees reappropriated by the state? *	

Other Comments

* Tuition and fee revenue is appropriated to institutions as a non-general fund component. Virginia institutions separately identify actual student revenue via NCES from 2300-4.

WASHINGTON

Recent Trends

Between 1977 and 1981, appropriations for higher education in Washington rose 46 percent to $489 million (including funding for institutional support, student aid and other activities such as vocational-technical education, state boards, and interstate reciprocity payments). Because enrollments were relatively unchanged during this period, these gains in state and local support produced a real-dollar expansion of 4.1 percent in the public sector. The gains, however, were centered in one sector--the two-year schools. All other public sectors lost ground in state funding, by 3.5 to 9.4 percent.

Tuition increases between 1977 and 1981 were even greater, creating a 22.7 percent improvement in tuition revenues per student, even after adjustments for inflation. With both appropriations and tuition revenues showing real gains, total revenues in Washington increased by 8.2 percent over the four-year period. The academic two-year schools gained 26.0 percent, and the occupational two-year institutions gained 13.2 percent. By contrast, the research universities lost 1.3 percent in purchasing power, the three comprehensive schools lost .3 percent, and the general baccalaureate (Evergreen State) lost nearly 8 percent in real-dollar revenues.

State Financing of Higher Education

Tax contributions per capita for higher education in Washington were 18 percent greater than average in 1981, even though the level of tax revenues collected in the state was just below the U.S. average. This is because Washington lawmakers allocate a much larger than average share of the state's budget to higher education. Washington spent $118 per capita for higher education in 1981 as compared to the U.S. average rate of $100 per capita.

Of the $118 spent on higher education, the state channels $111 to the public institutions in the form of appropriations, spends $5 on "other" functions (primarily vocational education), and spends the remaining funds on state student aid for students at both public and private institutions. The state allocates an above-average share of these higher education funds to institutions, and less funds are provided for student aid than average.

State Tax Base and Budget

Washington has a slightly greater capacity to raise taxes than average but under utilizes that capacity by 7 percent. Tax revenues collected are just below the U.S. average (index 96). Washington's tax capacity is strongest in individual income, residential property, general sales, and licenses. Its tax structure is heavily weighted toward sales tax categories--both general sales, where it has the highest rate in the U.S., and selective sales, where it is third highest. The state collects no income taxes, neither personal nor corporate. Property taxes in the state were also lower than average. Tax rates related to death and gift transfers (Washington ranks 5th) were substantial.

Although revenues from these tax sources are 4 percent below average, when total state resources are combined (including federal revenue-sharing funds), the state's total budget is 16 percent larger than average. Higher education receives an 11 percent share of that budget, a share 22 percent above average. Highways and elementary/secondary education are also favored state activities, at the expense of public welfare, health and hospitals, and "other" services. Although higher education receives an above-average share of a larger than average state pie, its share of the state budget has declined from 1977, when it received 13 percent (in contrast to 11 percent in 1981).

Higher Education Enrollments

Washington's financial commitment to higher education has provided a level of access to public higher education afforded by very few other states. Residents of Washington are 12 percent more likely to participate in higher education than average. Thirty-eight FTE students for every 1,000 individuals in the state are enrolled in a college or university, compared to the 34 per 1,000 averaged nationally. Only four other states provide more access for residents than Washington; three states provide the same. In Washington, access to higher education is directly tied to public-sector enrollments, as only one-half as many Washington residents as average attend private schools in the state or go to other states seeking higher education. As a consequence, this impressive level of access is carried by the state. Enrollments in the public sector involve 36.3 FTE per 1,000, a level 24 percent higher than average. More than half of these students (51 percent) attend one of the 27 community colleges in the state, a very large share compared to other states. The comprehensive and baccalaureate sectors are smaller than average, and university-level enrollments are average. Washington's student population is less graduate as a whole because of this emphasis on the two-year sectors, and the system is therefore less expensive to run.

Institutional Finances and Characteristics

Although Washington's appropriations per capita for public higher education are 23 percent above the average, the state spreads these funds over a pool of students that is 24 percent larger than usual. As a result, state appropriations per student in Washington are 2 percent below average. The distribution of these funds by category of institutions varies, however. All sectors of public institutions receive above-average funding from state and local sources except the two medical research universities, which combined receive 11 percent less than similar institutions elsewhere. By contrast, the baccalaureate school (Evergreen State) receives funding from the state that is 74 percent above average, and the comprehensive and two-year schools receive 5 to 12 percent more than the U.S. average for comparable schools.

Tuitions are quite low in the public sector (30 percent below average), and consequently, the total revenues per student are 6 percent below the national average. From 1977 to 1981, the medical research universities found their state-funds index of 89 falling to an index of 85 (15 percent below average) in terms of total funding (excluding government grants and contracts). Similar declines are evident in the other sectors.

Faculty salaries improved between 1977 and 1981, putting them close to or above national averages at all public sectors in the state. However, there are clear variations by rank. Salaries for full professors are below average in all cases, while those for the lower ranks are close to or above average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 7,734,568
Postsecondary vocational technical education	$ 18,201,000 (9,550 FTE)
State boards and commissions	$ 2,388,000
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 185,000
Service functions provided centrally (e.g. computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0

Current Funds revenues dedicated to capital purposes:

- tuition and fees	$ 19,249,000
- auxiliary enterprises	$ not available
- other	$ 0

Tuition and Fees reappropriated by the state? Yes

WEST VIRGINIA

Recent Trends

State and local appropriations to public higher education in West Virginia went up 65.1 percent between 1977 and 1981. Because enrollments remained nearly level during this period, inflation-adjusted appropriations showed a net gain of 17.4 percent per student, ranking West Virginia 8th in the nation. This impressive growth in appropriations, coupled with a 48.3 percent rise in real-dollar tuition and fees (2nd in the nation), resulted in a 20.3 percent increase in the real-dollar total E&G revenues per student. This gain in funds for West Virginia's public higher education was nearly twelve times the national rate. Only four states showed greater improvements in funding for public higher education during this period.

The gain was highly concentrated, however, in West Virginia University and the state's two two-year occupational colleges. Real-dollar revenues per student declined substantially for other types of public institutions. In particular, the loss of 16.4 percent at the state's eight general baccalaureate colleges is significant, given that these schools enroll nearly 38 percent of all public students in the state.

State Financing of Higher Education

State and local government support for public institutions of higher education in West Virginia was $78.20 per capita in 1981, 14 percent below the national average, ranking the state 34th in the nation. Also, public enrollments were 10 percent below average, so the state's per-student appropriations of $2,970 (ranked 28th) were only 5 percent below the national average of $3,099. However, low tuition and revenues from other sources lowered total E&G revenues per student to well below average.

The state of West Virginia appropriates $1.20 per capita for student financial aid, compared to the U.S. average of $3.80 per capita. West Virginia appropriates $9.00 per capita for fringe benefits of higher education employees separate from institutional funding, state boards and commissions, and interstate contracts.

State Tax Base and Budget

West Virginia's potential tax wealth, with a tax capacity of $888.77 per capita (32nd in the nation), is 7 percent below the national average of $948.73. The state has below-average capacity in general sales, individual and corporate income, and residential and farm property.

The tax effort of West Virginia is 18 percent below the national average, with a state rank of 43rd. This combination of low tax capacity and tax effort results in collected tax revenues of $729.92 per capita, 24 percent below average, ranking West Virginia 43rd in the nation in tax funds available to support public services.

West Virginia allocates a high 13 percent of its tax revenues to higher education, compared to the national average of 11 percent. Still, because tax revenues are low, this results in appropriations of $87.90 per capita for institutional support, student aid, and "other" support, 12 percent below average, ranking West Virginia 33rd in the nation.

If the total operating budget of West Virginia (including nontax revenues) is included, highways receive a much larger share of the budget relative to national average allocations, elementary/secondary education receives an average share, and the other functions receive a proportionately smaller share.

Higher Education Enrollments

West Virginia, with an enrollment rate of 26 students per 1,000 population, is ranked 47th in the number of residents attending college anywhere. Residents of this state are one-quarter less likely to enroll in higher education. Enrollments are below average both in and out of state.

The public and independent institutions of West Virginia enroll 60,394 FTE students, a smaller than average higher education enterprise relative to the state's population. Enrollment in the public sector compared to enrollment in the independent sector is in an 85 to 15 percent ratio, much higher than the national average balance (a 76 to 24 percent ratio). The state's public enrollments of 51,336 FTE students attend 16 institutions; 17,201 are enrolled at West Virginia University (medical research university), and 19,618 attend the state's eight general baccalaureate colleges. Seven of the state's 12 independent institutions are general baccalaureate, and they have an average enrollment of slightly over 1,000 students.

The state is ranked 34th in public enrollment load, with 26.3 FTE students per 1,000 population--10 percent below the national average. Only 41.0 percent of the state's high school graduates enter public higher education in the state, compared to the national average of 62.4 percent. The state has an above-average in-migration of nonresidents attending public institutions. The high retention factor indicates the state's emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

West Virginia University receives nearly average appropriations from the state (4 percent below), but low revenues from tuition, private gifts and grants, and other sources result in total educational and general revenues per student that are 15 percent below the average for research universities with medical programs. Marshall University (a comprehensive) receives an even lower amount of state support, with appropriations of 29 percent below average for comprehensive institutions.

Tuition is also 36 percent below average at Marshall, so it has total E&G revenues per student equal to an index of 67. The state's eight baccalaureate colleges fare even worse, with low state support and tuition resulting in total E&G revenues per student that are 36 percent below the average for these types of colleges.

Instructional expenditures at four-year institutions, which enroll a majority of the public students in the state, are 24 to 39 percent below average. Faculty salaries in all sectors are below average. Both West Virginia University and the eight baccalaureate colleges conduct public-service programs with above-average funding per capita.

The seven independent baccalaureate colleges in the state charge nearly average tuition and with high other revenues obtain total E&G revenues per student that are near the national average. Instructional expenditures are nearly average; faculty salaries are 12 percent below average.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 2,460,411
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 797,246
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 15,000,000 (estimate)
Interstate contracts and reciprocity payments	$ 709,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 15,873,352*
- auxiliary enterprises	$ 0
- other	$ 0

Tuition and Fees reappropriated by the state? No

Other Comments

* Not clear whether institutions report this figure to HEGIS.

(Indexes shown in bold are based on U.S. average = 100)

WISCONSIN

Recent Trends

Inflation-adjusted state and local funding per student for higher education in Wisconsin took a major dive between 1977 and 1981, the most drastic drop of all of the states except two (Montana and Florida). The purchasing power of state monies per student fell 16 percent, and all categories of public institutions suffered. The medical research university (University of Wisconsin--Madison) was most severely impacted, with state support dropping a drastic 25 percent. The comprehensives and general baccalaureate institutions were also severely hit, as the value of appropriations in constant dollars per student dropped 18 and 20 percent, respectively. State funding at the nonmedical university (University of Wisconsin--Milwaukee) shrank by nearly 11 percent, and the two-year schools had losses of 6 to 8 percent. Tuition revenues for the public sector overall kept pace with both enrollment growth and inflation. Although the decreases in state funding were ameliorated somewhat by other revenue sources, all sectors nevertheless experienced losses in constant-dollar support, averaging 13.4 percent.

In contrast, the independent sector gained 6 percent in its overall spending power. These improvements occurred in four of the six categories of independent schools.

According to census figures, the proportion of the state budget allocated to higher education fell from 13 percent in 1977 to 12 percent in 1981. Despite this slippage, in 1981 Wisconsin still allocated an above-average share of its budget to higher education, and its per-capita expenditures for public higher education ranked 6th in the nation.

State Financing of Higher Education

Wisconsin spends $136 per capita for higher education, an amount 36 percent greater than the national average. Ninety-one percent of this expenditure goes toward general support of institutions, with student aid receiving 4 percent. The public sector receives 97 percent of the state's expenditures for higher education. Of the share going to private higher education, two-thirds is for student aid and one-third is for institutional support.

State Tax Base and Budget

Wisconsin raised $1,046 per capita in state taxes, 10 percent more than the U.S. average. Although Wisconsin's inherent tax wealth is 6 percent below average, the state has a high tax rate (ranking 8th nationally), which accounts for the state's large pool of tax revenues. Wisconsin's tax effort ranks in the top ten nationally for individual income, corporate net income, and death and gift taxes. The largest portions of Wisconsin's tax capacity are found in general sales (23.5 percent), residential property (20.8 percent), and individual income taxes (18.1 percent). Elementary/secondary education receives 26 precent of the state budget (the largest portion), followed by 17 percent for "other" services, and 15 percent for public welfare. Higher education and public services both receive 12 percent of the budget, and highways receive 10 percent. Health and hospitals and "other" services are comparatively most underfunded. Although the portion going to higher education declined to 12 percent in 1981, that allotment was still 33 percent greater than the average higher education budget share.

Higher Education Enrollments

Wisconsin residents are far more likely to attend higher education institutions than are residents of other states. The state's public institutions accommodate 33 residents per 1,000 capita, a number 27 percent above average. As a consequence of this emphasis on enrollment in the state's public institutions, Wisconsin residents seeking a college education are less likely to enroll in private schools within the state or to go to out-of-state institutions.

Although Wisconsin residents do not generally migrate to other states for higher education, a substantial number of students from other states, nearly 40 percent more than the average number, do come to Wisconsin. The high resident enrollment, combined with large numbers of nonresidents, results in a heavily enrolled public sector--a system with 28 percent more students than average. This large number of students creates a significant funding load for the state.

Although there are 33 private institutions, compared to 31 public institutions, 86 percent of the total enrollment is in the public sector. Of the public students, 31 percent are enrolled in universities, 36 percent attend comprehensive institutions, and 31 percent attend two-year institutions. This pattern is fairly typical, except for the concentration in comprehensive institutions, which is well above average. The University of Wisconsin--Madison enrolls a larger than average number of graduate students when compared to similar institutions--26 percent versus 21 percent--thus creating additional funding needs for the campus. As for private enrollments, 55 percent of the students are concentrated in baccalaureate institutions and 35 percent attend Marquette University.

Public enrollments rose by nearly 10 percent from 1977 to 1981, compared to a 12.7 percent rise in the private sector. With 206,806 FTE students, Wisconsin's total enrollment in higher education is the 12th largest in the nation.

Institutional Finances and Characteristics

If total E&G revenues (excluding government contracts) are considered, public institutions in Wisconsin receive per-student funding that is 6 percent above national levels. This is largely the result of above-average state funding and tuition revenues. However, the distribution of these funds is quite uneven, and three sectors function with below-average funding (of 5 to 8 percent) while three others receive 17 to 56 percent more than similar institutions elsewhere. The largest sector, the comprehensives, is the most underfunded compared to national averages and operates with 8 percent less per student than the norm. The University of Wisconsin--Madison has 5 percent less in operating support than average, compounding its relatively greater needs for support given its above-average emphasis on graduate education. The University of Wisconsin--Milwaukee also receives revenues that are 5 percent below average, but it is much less graduate in orientation than similar institutions. The two-year occupational schools are the best funded and function with 56 percent more in funds than the average for this sector. The academic two-year schools are funded above average by 17 percent. Parkside, the one public baccalaureate institution in the state, has a pool of funds to support general operations that is 23 percent larger than the average.

Total revenues for institutions in the private sector are close to average, although there are major variations in funding among different types of institutions. Only Marquette University functions with significant below-average funding.

Faculty salaries in Wisconsin are at national levels in the public sector but are 8 percent below average in the private sector. Although Wisconsin's increases in faculty salaries from 1977 to 1981 were close to national rates, differences by rank were evident; in comparison with similar faculty elsewhere, faculty in the lower ranks fare better than did full professors. The average size of public institutions in Wisconsin is generally substantially larger than usual, except for the ten comprehensive institutions, which are slightly smaller. Presuming some economies of scale, this reduces funding needs somewhat.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 22,959,000
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 5,669,500
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (University extension)	$ 26,180,400

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 40,143,000
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 14,107,700
- other	$ 0

Tuition and Fees reappropriated by the state? No

(Indexes shown in bold are based on U.S. average = 100)

WYOMING

Recent Trends

Wyoming was 2nd in the nation in its increase of state appropriations to higher education from 1977 to 1981. Although enrollment increased only 4.7 percent, total state and local appropriations increased 90.2 percent. Measured in constant dollars, state and local appropriations per student went up 29.9 percent, the third highest increase in the nation. Tuition and fees per student, however, fell 9.[illegible] percent in constant dollars during this period. The net result was a constant-dollar improvement of 19.0 percent in total E&G revenues per student. Public higher education in Wyoming therefore had the benefit of the sixth largest increase in purchasing power in the nation.

Laramie County Community College (a two-year occupational school) had a remarkable 85.6 percent increase in real-dollar appropriations per student, a 41.3 percent increase in real tuition, and a resulting 75.0 percent increase in total E&G revenues per student in constant dollars.

State Financing of Higher Educaton

General institutional support from state and local governments for public institutions of higher education in Wyoming was $166.90 per capita in 1981 (84 percent above the national average), ranking the state 2nd in the nation. Public enrollments were only slightly (5 percent) higher than average, so the state's per-student appropriations of $5,392 (ranked 3rd) were 73 percent above the national average of $3,099.

Wyoming appropriates no funds for student financial aid, compared to the U.S. average of $3.80 per capita. The state appropriates a small amount for operation of state boards and commissions.

State Tax Base and Budget

Wyoming has a very high tax potential, with a tax capacity of $1,861.55 per capita (2nd in the nation), 96 percent above the national average of $948.73. The state has above-average capacity in all major tax categories. In severance taxes the capacity is 20 times the average.

The tax effort of Wyoming is very low, 26 percent below the national average, with a state rank of 47th. High tax capacity outweighs the low tax effort and results in collected tax revenues of $1,384.05 per capita, 45 percent above average. As a result, Wyoming ranks 3rd in the nation in tax funds available to support public services.

Wyoming allocates a high 13 percent of its tax revenues to higher education, compared to the national average of 11 percent. This high rate combined with high tax revenues results in total appropriations for higher education of $167.10 per capita, 67 percent above average, ranking Wyoming 2nd in the nation.

If the total operating budget of Wyoming (including nontax revenues) is considered, highways receive a larger share of the budget relative to national average allocations, and public welfare receives a proportionately smaller share.

Higher Education Enrollments

Wyoming, with an enrollment rate of 32 students per 1,000 population, is ranked 25th in the number of residents attending college anywhere. The nation averages 34 students enrolled per 1,000. There are no private institutions in the state, so in-state access for residents is provided by the public sector. On average, 12 percent more residents attend public in-state schools than is typical. Fifty percent more residents attend out-of-state institutions than average.

The public institutions of Wyoming enroll 14,700 FTE students, a much smaller than average higher education enterprise relative to the state's population. Wyoming has no independent institutions. The state has eight public institutions, with the largest, the University of Wyoming, enrolling 8,092 FTE students.

The state is ranked 19th in public enrollment load, with 30.9 FTE students per 1,000 population--5 percent above the national average. A larger percent than average of the state's high school graduates enter public higher education in the state. Also, more students than average in-migrate from out of state to attend Wyoming public institutions. The high retention factor indicates the emphasis on upper-division, graduate, and professional education.

Institutional Finances and Characteristics

The University of Wyoming enrolls over half of the public students in the state and receives state appropriations per student twice the national average for a university with no medical programs. Tuition at the university is 17 percent below average, and private gifts and grants and other revenues are over four times the national average. As a result, total educational and general revenues per student at the university are twice the national average. The six public two-year academic and one two-year occupational college also receive nearly twice the average appropriations, and average total E&G revenues are well above average.

As a result of this high funding, expenditures for instruction per student and for academic support per faculty member substantially exceed national averages for all public institutions in Wyoming. Faculty salaries are just slightly above average. The University of Wyoming has a very heavily funded public-service program.

Data Notes

1980-81

Additional State and Local Government Funding for Higher Education

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the State and Local Government Support of Higher Education section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 0
Postsecondary vocational technical education	$ 0
State boards and commissions	$ 101,784
Retirement benefits (including social security)	$ 0
Fringe benefits	$ 0
Interstate contracts and reciprocity payments	$ 0
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other	$ 0

Clarification of Institutional Financial Reporting

These funds have been included in the HEGIS reports but are noted here to clarify differences in practices among the states that affect the comparability of these data.

Debt service that is part of state and local appropriations to public institutions in the state	$ 0
Current Funds revenues dedicated to capital purposes:	
- tuition and fees	$ 0
- auxiliary enterprises	$ 0
- other	$ 680,085*

Tuition and Fees reappropriated by the state? No

Other Comments

* In FY80, construction projects at seven community colleges were funded with state mineral severance tax revenues.

Wyoming has no unified system for administration of higher education. Therefore, these figures reflect only the community college system.

Source: Wyoming Community College Commission

(Indexes shown in bold are based on U.S. average = 100)

APPENDIX A: LISTING OF INSTITUTIONS BY CLASSIFICATION, CONTROL, AND STATE

Description of the Institutional Classification System

Most earlier studies of higher education financing have used a three-category institutional classification system--university, four-year, and two-year institutions--prompted largely by the use of these categories by the National Center for Education Statistics (NCES). Given the substantial differences among higher education institutions in terms of their relative emphasis on different levels and fields of study and the implications of these differences for financial comparisons, this study uses a more detailed classification, based on ten different institutional categories, plus a distinction between the public and private/independent sectors.

This classification procedure was developed by NCHEMS, and is modified here to identify separately doctoral institutions that offer first-professional health science programs (that is, medicine, dentistry, osteopathy, and veterinary medicine). NCHEMS uses an explicit set of empirically based criteria that are applied objectively by computer analysis to identify each institution's category.

The criteria are based on:

- The number of degrees earned, by type of degree (associate, bachelor's, master's, doctorate, and first-professional) as an indication of the institution's *commitment* to the levels of education offered (for example, postbaccalaureate, undergraduate).
- The number of fields in which degrees were earned. This measure is an indication of the *diversity* of program offerings at an institution.
- The ratio of degree completions in several specific fields to total degree completions. This is an indication of *program emphasis* at an institution.
- Research expenditures as an indication of the centrality of *research* activities to the mission of a campus.
- For the purposes of this study, an additional criterion was used to distinguish whether medical-related activities were an integral part of the educational mission of the institution. The granting of professional doctoral degrees in the fields of medicine, dentistry, osteopathic medicine, or veterinary medicine places campuses in the category "with medical" as contrasted to "without medical." This criteria was applied only to universities (that is, research universities and universities).

This classification process uses the Higher Education General Information Survey (HEGIS) data on degrees and finances, which were obtained from NCES. Only those institutions reported in the HEGIS universe are included. Many nonresponding single-program occupational schools are therefore not included in this universe.

In identifying "campus units" for classification, the study relied on the reporting units used by NCES in the HEGIS surveys. This caused some problems for branch campuses that were separately classified based on their own degree-granting activities and *not* on the basis of those at the parent institution. Several institutions reported enrollment and financial data but did not report degrees conferred. These institutions were hand-classified into appropriate categories based upon input from their respective state agency and judgment as to where such institutions belonged in the classification scheme. In addition, 10 other institutions, reporting degrees conferred, were hand-classified because of the unique nature of the institution (for example, Rockefeller University in New York and the Rand Graduate Institute of Policy Studies in California).

The major categories in the NCHEMS institutional classification system and numbers of institutions by category and control in this study are:

	Public	Independent
• Research Universities		
- with medical	40	20
without medical	25	5
• Universities		
- with medical	10	8
without medical	33	25
• Comprehensive Institutions	256	162
• General Baccalaureate Institutions	116	595
• Two-Year Institutions		
- with academic/ comprehensive program emphasis	637	123
- with occupational program emphasis	303	236
• Health Professional Institutions	31	23
• Other Professional/ Specialized Institutions	30	518
Total	1,481	1,715

The criteria used in classifying institutions by these categories are as follows:

Research Universities

These institutions are characterized by a significant level of activity in and commitment to doctoral-level education as measured by the number of doctorate recipients and the diversity in doctoral program offerings. These institutions also engage in a significant level of research activities as measured by the amount of expenditures for research purposes. (In this edition, the leading 100 institutions in research expenditures were potentially in this category, although 10 were dropped because they did not meet the degree criteria.) Included in this category are those institutions that are not considered specialized (see "other professional and specialized") and that grant a minimum of 30 doctoral-level degrees on an annual basis. These degrees must be granted in three or more doctoral-level program areas [1] or, alternatively, have an interdisciplinary program at the doctoral level. (If first-professional medical degrees (M. D., D. O., D. D. S., D. M. D., D. V. M., or equivalent) were included in the counts of doctoral degrees, some institutions would be classified as universities with medical programs rather than comprehensive institutions.)

Universities

These institutions meet all of the criteria stated above except they are not as significantly involved in research activities as the research universities.

Comprehensive Institutions These institutions are characterized by a strong, diverse postbaccalaureate program (including first-professional) but do not engage in significant doctoral-level education. Specifically, this category includes institutions not considered specialized schools in that the number of doctoral-level degrees granted is less than 30 or in that fewer than three doctoral-level programs are offered. In addition, these institutions must grant a minimum of 30 postbaccalaureate [2] degrees and either grant degrees in three or more postbaccalaureate programs, or, alternatively, have an interdisciplinary program at the postbaccalaureate level.

General Baccalaureate Institutions

These institutions have, as their primary emphasis, general undergraduate, baccalaureate education. They are not significantly engaged in postbaccalaureate education. Included are institutions not considered specialized institutions in which the number of postbaccalaureate degrees granted is less than 30 or in which fewer than three postbaccalaureate level programs are offered, but either (a) grant baccalaureate degrees and grant degrees in three or more baccalaureate programs, or (b) offer a baccalaureate program in interdisciplinary studies. Additionally, over 25 percent of the degrees granted must be at the baccaluareate level or above.

Two-Year Institutions

These are institutions in which fewer than 25 percent of their degrees are conferred at the baccalaureate or postbaccalaureate level, and that confer over 75 percent of their degrees or awards for two years of work, or formal awards and completions requiring less than two years of work are considered two-year institutions. Institutions with a two-year upper division program would *not* fall in this category because they grant baccalaureate degrees.

a) Academic/Comprehensive Program: Institutions in which the number of degrees awarded in the academic area (5600 field in the HEGIS Taxonomy) is at least 80 percent of all degrees awarded.

b) Occupational Program: Institutions in which degrees or awards in two or more occupational programs are conferred and that grant less than 20 percent of their degrees in the academic area (5600 field in the HEGIS Taxonomy).

Health Professional Institutions

Institutions in which health science education is the primary objective and which confer first-professional medical degrees such as M. D., D. O., D. D. S., and D. V. M. constitute medical institutions. These institutions are those (a) in which the number of professional health science degrees (medicine, dentistry, optometry, pharmacy, and so on) granted plus the number of other health science degrees (1200 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five, and (b) in which one of the following first-professional medical degrees is conferred: M. D., D. D. S., D. O., or D. V. M.

---

[1] Programs or program areas are a major field of study as defined at the two-digit level of the HEGIS Taxonomy of Programs.

[2] Includes master's, doctoral, and first-professional degrees.

Other Professional and Specialized Institutions

This category includes a diverse group of specialized institutions. For purposes of the study, they have been collapsed into a single category. The more detailed distinctions are:

a) *Other Health Institutions* - Institutions in which health science is the primary objective but that do *not* confer an M. D., D. D. S., D. O., or D. V. M. are referred to as other health institutions. These institutions are those that satisfy criterion (a) in the health professional institutions, but do not award any one of the following first-professional medical degrees: M. D., D. D. S., D. O., or D. V. M.

b) *Education Schools* - Institutions in which over 60 percent of their degrees are conferred in education (0800 field in the HEGIS Taxonomy), or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

c) *Engineering Schools* - Institutions in which either the number of degrees awarded in the area of engineering (0900 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

d) *Divinity Institutions* - Institutions in which either the number of professional theological degrees plus the number of other degrees granted in theology (2300 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

e) *Business and Management Schools* - Institutions in which over 60 percent of their degrees are conferred in the area of business and management science (0500 field in the HEGIS Taxonomy), or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

f) *Art, Music, and Design Schools* - Institutions in which over 60 percent of their degrees are conferred in the area of art, music, and/or design (1000 field in the HEGIS Taxonomy), or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

g) *Law Schools* - Institutions in which either the number of professional law degrees (L. L. B. or J. D.) plus the number of other degrees awarded in law (1400 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or, alternatively, the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

h) *U.S. Service Schools* - Although these schools are separately categorized here, they were *excluded* from the study.

i) *Other Specialized or Professional Schools* - Institutions that grant degrees in *fewer than three programs* at the baccalaureate level, master's level, and the doctorate level and do *not* confer over 50 percent of their degrees in any of the above categories.

There follows a listing of all campuses included in this study, by institutional category and state. The states are shown in alphabetical order. The institutions listed include campuses that reported HEGIS data to NCES during the years FY77 through FY81.

APPENDIX B: DATA SOURCES AND CAUTIONS

Section One: Data Sources and Definitions

To facilitate the cross-reference of data sources with the state profiles, the attached data-sources information is referenced on a page-by-page basis for the seven data pages.

FIRST DATA PAGE - STATE FINANCING OF HIGHER EDUCATION

Section: State and Local Government Support of Higher Education 1981 (Per Capita)

Student Aid

Source: NCES. *HEGIS XVII: State Expenditures for Postsecondary Education for Fiscal Years Ending 1981 and 1982.* Washington, D. C.: NCES, 1983; or special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected State Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

Funds that are appropriated to and expended for student aid through acts of state and local governments for outright scholarship grants, fellowship stipends, and work-study to individuals enrolled in formal coursework, either for credit or not. These funds are provided *directly* to students. They do not include state appropriations to institutions for student aid. Includes both merit (academic and athletic) and need-based awards to students at the undergraduate and graduate level attending in-state institutions.

General Institutional Support

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

General institutional support is the sum of lines 3 and 4 from Part A. All amounts received from or made available to institutions through acts of state and local legislative bodies, except grants or contracts. These funds are for meeting current operating expenses and not for specific projects or programs.

Other

Source: NCES. *HEGIS XVII: State Expenditures for Postsecondary Education for Fiscal Years Ending 1981 and 1982.* Washington, D. C.: NCES, 1983; or special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected State Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

State and local government appropriations for higher education, excluding those for student aid noted above and institutional appropriations as represented in the HEGIS reporting universe. This category reports *other* government support for higher education operations *not reported through HEGIS.* Included are appropriations for operating expenses for postsecondary vocational-technical institutions not listed in the HEGIS universe; support for the operating expenses of postsecondary education coordinating boards, governing boards, boards of trustees, system offices, or similar organizations not reported through HEGIS; certain reciprocity payments to other states; support for the operation of centralized services (library, computing, extension); and state and locally paid fringe benefits and retirement payments that do not flow directly through instructional accounts.

Total

Source: Derived measure.

The sum of state and local support provided for student aid, general institutional support, and other.

Population

Source: U. S. Bureau of the Census, *Current Population Reports*, "Population Estimates and Projections: Provisional Estimates of the Population of States: July 1, 1981," Series P-25, no. 911, April 1982.

Per-capita measures are used throughout the study and utilize these population figures. Estimates of state population are conducted annually by the U. S. Census Bureau and the states under the Federal-State Cooperative Program. The count represents individuals who, at the time of the survey, considered the given place their usual residence. Residence is interpreted here as the place a person lives and sleeps rather than the legal or voting residence.

State and Local Tax Capacity, Effort, and Revenues

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimate*, ACIR, Washington, D. C., June 1982.

See definitions in section entitled "Tax Capacity and Effort 1980."

Percent Allocated to Higher Education

Source: Derived measure.

Percent calculated by dividing the total state appropriation by tax revenues.

State and Local Appropriations to Higher Education Per Capita

Source: Derived measure.

The sum of state and local support provided for student aid, general institutional support, and "other" divided by the state's population. These appropriations are shown separately for public and independent institutions, where state record-keeping practice permits a separate distinction. Where this information is not available, the figures are shown under "not identified by sector."

It should be noted that for this study the HEGIS universe of institutions has been modified in two ways. First, all U.S. service schools such as West Point and the U.S. Air Force Academy have been *excluded* from the analysis because they do not receive state funds and because their inclusion would dramatically distort state sector averages. Second, all institutions in the U.S. territories (for example, Puerto Rico) are not included because the territories are not "states."

Section: Enrollments 1981

Population

Source: U.S. Bureau of the Census, *Current Population Reports*, "Population Estimates and Projections: Provisional Estimates of the Population of States: July 1, 1981," Series P-25, no. 911, April 1982.

Total Enrollment

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D.C.: NCES, 1980. (Magnetic Tape.)

FTE enrollment figures are based on the sum of full-time men plus full-time women plus an FTE of part-time students (as reported by institutions)--that is, line 14, columns 13 and 14, and line 28, column 15 on the survey form. (For institutions that do not report the FTE of part-time students, FTE is calculated by summing part-time men and part-time women, and dividing by three.)

Enrollment of State Residents

Source: NCES. (1) *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D.C.: NCES, 1980. (Magnetic Tape) and (2) NCES. *HEGIS XIV: Residence and Migration of College Students, Fall 1979.* Washington, D.C.: NCES, 1979. (Magnetic Tape); or the special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected State Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

To determine public and independent *resident* FTE enrollments per 1,000 population, total FTE enrollment was factored by the resident ratios for first-time students as derived from the NCES residence and migration survey. The number of residents attending institutions outside the state are based on first-time student counts from the specific source state. The total is the sum of residents attending public and private institutions in the state plus residents attending out-of-state institutions.

Section: State and Local Government Direct General Expenditures by Function 1981

Expenditures by Category

Source: U.S. Bureau of the Census, *Governmental Finances in 1980-81*, Series GF81, no. 5, U.S. Government Printing Office, Washington, D.C., 1982.

Higher Education - Facilities and activities of all educational institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classed under natural resources, and university-operated hospitals serving the public are classed under hospitals.

Elementary/Secondary - Comprises all direct expenditures by local governments for education, other than any direct spending for institutions of higher education, and any direct state government spending for operation of, or facilities and supplies for, elementary and secondary public schools. Also includes all federal expenditures for education, state supervision of schools and colleges, and state tuition grants, fellowships, aid to private schools, and educational programs for the handicapped, adults, veterans, and other special classes.

Highways - Streets, highways, and structures necessary for their use, street lighting, snow and ice removal, toll highway and bridge facilities, and ferries.

Public Welfare - Support of and assistance to needy persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need.

Health and Hospitals - Health services, including health research, clinics, nursing, immunization, and so on. Hospitals include the establishment and operation of hospital facilities, provision of hospital care, and support of public or private hospitals.

Public Services - Services for the public, including police protection, fire protection, sewerage, and natural resources and parks.

Other - Categories include libraries, veterans services, air transportation, corrections, housing and urban renewal, governmental administration, interest on debt, and all other general expenditures.

Section: Tax Capacity and Effort 1980

Tax Capacity

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

Tax capacity is calculated using a representative tax system. Tax capacity of a state and its local governments is defined as the amount of revenue they could raise (relative to other state-local governments) if all 50 state-local systems applied identical tax rates (national averages) to their respective tax bases. Tax capacity is expressed as an index relative to the U. S. at 100. Tax bases include general sales, selective sales and gross receipts, licenses, individual income, corporate net income, property, death and gift, and severance. For a full description of tax capacity, see the source document.

Tax Effort

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

Meaures the extent to which tax capacity is actually used, and is expressed as the percentage relation between actual amounts of tax revenues collected by governments compared to tax capacity. Since the nationwide effort measure is 100 percent, the effort values for various states actually indicate how states compare in tax-effort performance to the national average.

Potential Amounts

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

The absolute dollar amount of tax capacity based on the total economic base of state and local governments as measured by the representative tax system.

Collected Amounts

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

Compulsory contributions exacted by state and local governments for public purposes. Includes interest and penalties but excludes refunds. *Nontax revenues* such as fees and charges, special assessments, rents, royalties, fines, interest earnings, and net profits from government-operated electric utilities, gas and water companies, liquor stores, and grain elevators *are excluded.*

Over (Under) Utilized Amounts

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

The difference between potential tax capacity and actual taxes collected.

Percent Distribution of Capacity

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

Shows the share of potential tax revenues attributable to each tax source for the state and U. S. average.

Amounts Per Capita

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

State and U. S. tax capacity and revenue are expressed in per-capita amounts.

Tax Categories

Source: Advisory Commission on Intergovernmental Relations, *Tax Capacity of the Fifty States, Supplement: 1980 Estimates*, ACIR, Washington, D. C., June 1982.

General Sales - Sales and gross receipts for retail trade and service businesses, such as hotels, personal services, and amusement establishments.

Selective Sales - Taxes on sales and gross receipts for motor fuels, alcoholic beverages, tobacco products, insurance, investor-owned electric, gas, telephone, and public utilities, pari-mutuel turnover from horse and dog racing, and amusement-related receipts such as from movie theaters.

Licenses - Taxes on motor vehicles, motor-vehicle operators, for incorporation of businesses, retail licenses for the sale of distilled spirits, and hunting and fishing licenses.

Individual Income - Federal personal-income tax liability.

Corporate Net Income - Corporate income allocated among states based on three factors: retail receipts, payroll, and corporate property. Typically, equal weights (one-third) are applied to each of these factors. However, property data were not available for 1980 and had to be estimated on the basis of payroll and sales in each industry.

Property Tax - Total property taxes on real and personal property are estimated for four broad classes of property--residential, commercial, farm, and public utilities. Three classes are reported separately in this study: residential, commercial, and farm.

a) *Residential* - Estimated sales value of specified owner- and renter-occupied property.
b) *Commercial and Industrial* - Estimated net book value of depreciable assets, inventories, depletable assets, and land of corporations.
c) *Farm Real Estate* - Estimated value of farm land and buildings.
d) *Public Utilities* - Gas-utility plant values allocated among states according to miles of gas pipeline, telephone plant values allocated among states according to number of telephones, and electric-plant values allocated among states according to electrical generating capacity in kilowatts. Public utilities are not separately reported but *are* included in the total.

Death and Gift - Value of taxable estate.

Severance - Value of mineral production. This is not a measure of reserves but only of current extractions.

SECOND AND THIRD DATA PAGES - PUBLIC AND INDEPENDENT INSTITUTIONS STATUS REPORT

Section: State and Local Finances

Abstracted from first data page - for public and independent institutions separately.

Section: Public Enrollments

High School Graduates

Source: *Statistics of Public Elementary and Secondary School Systems: Schools, Pupils, Staff, Fall 1980*; Washington, D. C.: NCES, May 1983; *A Comparison of Selected Characteristics of Private and Public Schools, 1979-80*, Washington, D. C., NCES, September 1981. (This publication is only available through ERIC, ED #225302.)

Headcount of persons graduating from regular public high schools and from private schools. (In the second edition of this study, FY79, high school graduates from private schools were *not* included. Strict comparisons for this number are therefore not possible between the second and third editions.) Does not include persons granted high school equivalency certificates nor persons graduated from other than regular day-school programs.

Entrance Rate to Public Institutions

Source: Derived measure.

Calculated by dividing first-time resident enrollment by high school graduates. This is a derived number and does not indicate the actual progression of a cohort of high school students to state public institutions that a longitudinal study could show.

First-time Resident Enrollment

Source: (1) NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape) and (2) NCES. *HEGIS XIV: Residence and Migration of College Students, Fall 1979.* Washington, D. C.: NCES, 1979. (Magnetic Tape); or special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

The percentage of residents of total headcount enrollments for each institutional classification was calculated using student-migration data. Total first-time headcount enrollment was multiplied by these percentages to equal first-time resident enrollment for each institutional category. The sum of these institutional-category enrollments equals the state's total public first-time resident enrollment.

In-migration to Public Institutions

Source: (1) NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape), and (2) NCES. *HEGIS XIV: Residence and Migration of College Students, Fall 1979.* Washington, D. C.: NCES, 1979. (Magnetic Tape); or special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

The number of first-time students coming from out of state is calculated by subtracting first-time resident enrollment from total first-time enrollments.

First-time Enrollment

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

First-time resident enrollments plus first-time students from out of State.

Retention Factor

Source: Derived measure.

Total public headcount enrollment divided by first-time headcount enrollment. This factor converts first-time to total enrollment.

Conversion Factor

Source: Derived measure.

Full-time-equivalent enrollment divided by total public headcount enrollment. This factor converts headcount to FTE enrollment.

FTE Enrollment

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Sum of full-time men plus full-time women plus a full-time equivalent of part-time students (as reported by institutions)--that is, line 14, columns 13 and 14, and line 28, column 15 on the survey form. (For institutions that do not report the FTE of part-time students, FTE is calculated by summing part-time men and part-time women and dividing by three.)

Section: Institutional Revenues

State and Local Appropriations

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Appropriations equal the sum of Part A, lines 3 and 4 of the HEGIS finance survey. Grants or contracts are excluded. Dollars appropriated or made available by state and local governments to public or private institutions of higher education for current operating expenses and not for scientific projects or programs. Federal appropriations received through state channels should be included in the total for federal appropriations. Tuition and fees collected by the institution and returned to the institution in the form of appropriations (that is, reappropriated tuition and fees) should have been subtracted, as they are already reported under tuition and fees.

Tuition Revenues

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, line 1 of the HEGIS finance survey. All tuition and mandatory fees assessed against students for current operating purposes. Includes tuition and fee remissions or exemptions even when there is no intention of collecting from the student. Includes those tuitions and fees that are remitted to the state as an offset to the state appropriations. (Charges for room, board, and other services rendered by auxiliary enterprises are not reported here.)

Private Gifts, Grants, and Endowment Income

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, lines 11, 12, 13, and 14 of the HEGIS finance survey. Private gifts and grants include revenues from private donors for which no legal consideration is involved. Private contracts include those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Monies received as a result of gifts, grants, or contracts from a foreign government are included. Endowment income includes the unrestricted income of endowment and similar funds; the restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Capital gains or losses are not included.

Other E&G (Excluding Government Contracts)

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, lines 2, 15, and 18 of the HEGIS finance survey. Includes revenues from federal appropriations, sales and services of educational activities, and "other." Federal appropriations include all amounts received from or made available to the institutions through an act of congress, except grants or contracts. These funds are for meeting the current operating expenses and not for specific projects or programs. Examples are federal land-grant appropriations and federal revenue-sharing funds. BEOGs should not be included. Sales and services of educational activities include revenues derived from the sale of goods and services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. "Other" sources includes all items of revenue not covered elsewhere. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution.

Total E&G (Excluding Government Contracts)

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, the sum of lines 1, 2, 3, 4, 11, 12, 13, 14, 15, and 18. This is the same definition as for Total E&G revenues, except government grants and contracts are excluded.

Government Grants and Contracts

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, the sum of lines 5, 6, 7, 8, 9, and 10 of the HEGIS finance survey. Includes revenues from governmental agencies (federal, state, and local), which are for specific research projects or other types of programs. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered.

Faculty counts are taken from the following source: NCES. *HEGIS XV: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1980-81.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Headcount of instructional faculty on 9 to 10 month contracts. Does *not* include faculty on 11 to 12 month contracts. If significant numbers of faculty are so employed, these figures will be overstated due to the undercounting of faculty.

Total E&G Revenues

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part A, the sum of lines 1 through 15, and 18. Consists of current funds revenues from state and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes.

Percent Distribution: Institutional Revenues

Source: Derived measure.

This measure shows the share of revenues provided by each source. The next-to-last column is an intermediate total, with the final share contributed by government grants and contracts.

Section: Institutional Expenditures

Instruction

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part B, line 1. Instruction expenditures of the colleges, schools, departments, and other instructional divisions of the institution, and expenditures for departmental research and public service that are not separately budgeted, should be included in this classification. Includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (for example, academic deans). This category includes the following: general academic instruction; occupational and vocational instruction; special-session instruction; community education; preparatory and adult basic education; and remedial and tutorial instruction.

Academic Support

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part B, line 4. Academic support includes expenditures for the support services that are an integral part of the institution's primary missions of instruction, research, or public services. Includes expenditures for libraries, museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration and personnel development, and course and curricular development.

Research

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Part B, line 2. Research includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. Does not include nonresearch projects (such as training programs).

Faculty counts are taken from the following source: NCES. *HEGIS XV: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1980-81.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Headcount of instructional faculty on 9 to 10 month contracts. Does not include faculty on 11 to 12 month contracts. If significant numbers of faculty are so employed, these figures will be overstated due to the undercounting of faculty.

Public Service

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D.C.: NCES, 1981. (Magnetic Tape.)

Part B, line 3. Public service includes all funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services that are beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community. Includes expenditures for community services and cooperative extension services.

Other E&G Expenditures

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D.C.: NCES, 1981. (Magnetic Tape.)

Part B, lines 6, 7, 8, 9, 10, and 11. Includes student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and E&G mandatory transfers. For complete definitions, please see the HEGIS finance form.

Total E&G Expenditures

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D.C.: NCES, 1981. (Magnetic Tape.)

Part B, line 12. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations.

FOURTH DATA PAGE - TRENDS

Section: State and Local Appropriations Diagram

Dollars

Source: NCES. *HEGIS XII-XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1977-1981.* Washington, D.C.: NCES, 1977-1981. (Magnetic Tape.)

Shows graphically the percentage change in state and local appropriations to public institutions between 1977 and 1981.

Enrollments

Source: NCES. *HEGIS XI-XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1976-1980.* Washington, D.C.: NCES, 1976-1980. (Magnetic Tape.)

Shows graphically the percentage change in public FTE enrollments between 1976 and 1980, the relevant academic period corresponding to the fiscal-year data used in this report.

Constant Dollars per Student

Source: "Higher Education Prices and Price Indexes: 1981 Update," Research Associates of Washington, Washington, D.C., 1981.

Takes the foregoing data on appropriations and enrollments and adjusts for inflation, using the Higher Education Price Index (HEPI). The HEPI measures average changes in the prices of goods and services purchased by colleges and universities through current fund E&G expenditures (excluding expenditures for sponsored research and auxiliary enterprises). The following table shows the index values used for this study:

Year	HEPI	
1977	146.7	
1978	156.5	
1979	168.7	1971=100
1980	185.3	
1981	205.2	

Section: Enrollment Mix Pie Diagram

Source: NCES. *HEGIS XI and XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1976 and 1980.* Washington, D.C.: NCES, 1976 and 1980. (Magnetic Tape.)

Using the institutional classification system described in appendix A, the distribution of enrollments by institutional type in the public and private sectors are calculated and shown separately for 1980 and for 1976. 1976 figures are in parentheses.

Section: State and Local Appropriations and Enrollments

These measures are the same as those shown previously, except in this section the absolute amounts for 1981 for appropriations (and for Fall 1980 for enrollments) are shown, along with percentage change for the four-year period 1977 to 1981 and for yearly changes for 1980 to 1981, 1979 to 1980, and 1978 to 1979.

Section: A Comparison of Tuition Revenues and Instruction Expenditures

These data are the same as those shown on the second and third data pages for tuition revenues and instruction expenditures. The base measures are shown in constant dollars per student. The solid white column shows instruction expenditures, whereas the hachured column shows tuition revenues. The percentages at the bottom of each box show the proportion of instruction expenditures that tuition represents in FY77 and FY81.

FIFTH DATA PAGE - TRENDS

Section: Constant-Dollar Revenues

The revenue categories in this section are the same as those used in the status report pages (second and third data pages). The per-student amounts have been adjusted by the HEPI to provide constant-dollar amounts. The percent changes between 1977 and 1981, as well as individual yearly changes for 1980-81, 1979-80, and 1978-79, are shown in total by sector and for each institutional category.

Section: Trends in the Mix of Support for Higher Education

These data are the same as those shown at the base of the status report pages (second and third data pages). In addition to FY81 figures, revenue proportions for FY77 are also shown to depict changes in reliance on particular funding sources.

SIXTH DATA PAGE - FACULTY SALARIES

Average Faculty Salaries

Source: NCES. *HEGIS XV: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1980-81.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Part 1, A, lines 1, 2, 3, 4, 5, and 6. Instructional faculty are defined as those members of the instruction/research staff who are employed on a full-time basis, on 9 to 10 month contracts, whose major regular assignment is instruction, including those with released time for research. Instructional faculty on sabbatical leave are to be included at their regular salaries even though they may be receiving a reduced annuity while on leave. Replacement for those on sabbatical should not be included. Total salary outlay for each rank is divided by the headcount of full-time persons at that rank.

SEVENTH AND LAST DATA PAGE - INSTITUTIONAL DESCRIPTORS AND DATA NOTES

Number of Institutions

Source: NCES. *HEGIS XVI: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1981.* Washington, D. C.: NCES, 1981. (Magnetic Tape.)

Count of institutions in each category, based on the institutional classification system described in appendix A.

Mean Size of Institutions

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Cumulative FTE enrollment for institutions in each category is divided by the number of institutions in that category.

Total FTE Enrollment

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Fall 1980 enrollment is the relevant base for FY81 financial data. The cumulative enrollment of all institutions in that category.

Percent of Enrollment by Student Level

Source: NCES. *HEGIS XV: Fall Enrollment and Compliance Report of Institutions of Higher Education, 1980.* Washington, D. C.: NCES, 1980. (Magnetic Tape.)

Based on FTE counts. Lower division includes the sum of first-time freshmen, other first-year and second-year undergraduate students. Upper division includes the sum of third-year and fourth-year and beyond. Unclassified undergraduate and postbaccalaureate undergraduate students are combined. Graduate includes first-professional students plus graduate-student totals. Note that part-time undergraduate students are classified as lower division since the survey does not provide a breakdown by level.

Data Notes

Source: NCES. *HEGIS XVII: State Expenditures for Postsecondary Education for Fiscal Years Ending 1981 and 1982.* Washington, D. C.: NCES, 1983; and/or special survey of states conducted by the authors in May 1983 entitled, "Survey of Selected State Funding and Financing Practices for Postsecondary Education," Boulder, Colo., 1983.

"Additional State and Local Government Funding for Higher Education" reports the absolute-dollar amounts that are the basis for the "State and Local Government Support of Higher Education" table on the first data page. The second section of these data notes, "Clarification of Institutional Financial Reporting," provides additional clarifications on reporting practices in the states. A general "Other Comments" section follows to allow for clarification of special circumstances affecting the data analysis in the state. The sources of these data notes are noted at the bottom of this section.

Section Two: Important Data Cautions

The value of this study is highly dependent on the accuracy of the data. The data used (primarily finance and enrollment data collected by the National Center for Education Statistics) are the best comprehensive data available. However certain limitations exist and should be kept in mind for proper usage and interpretation of the data. To the extent that they have been reported to NCES or to the authors, these limitations have been documented in the "Data Notes" for each state and should be taken into account in any interpretations. Other problems recognized by readers and not identified here should be brought to the authors' attention.

Inclusion of Institutions

The HEGIS universe excludes postsecondary public and proprietary-area vocational-technical institutions that are not accredited by a nationally recognized accrediting body. For states with many postsecondary institutions of this type, enrollments and state appropriations reported in this study for the collegiate universe are presented in the "Data Notes" section as total amounts only. These institutions, however, are not included in the detailed institutional categories. Twelve states reported current operating expenditures for public postsecondary vocational-technical institutes not in the NCES-HEGIS universe. These expenditures ranged from a low of approximately $133 thousand to $92 million. On average, these states spent $28.0 million on postsecondary vocational-technical education.

Treatment of Central Administration Costs

Revenues and expenditures for administration at campus system offices are included in the finances for the parent institution. In states where administration is provided by a state postsecondary commission, similar administrative costs are *not* included. As a result, revenues and expenditures for these latter systems are somewhat understated. Many states had such expenditures, ranging from approximately $27 thousand to $14 million.

Chargebacks and Central Payment of Employee Benefits

For some large university systems, a single campus may provide services to other campuses. If some form of chargeback system is not used, then the finances for the campus providing the service will be overstated, and finances for the campuses receiving services will be understated. In other cases, employee benefits are paid to a separate agency handling such funds, and consequently, they do not flow through institutional accounts. Approximately 13 states had expenditures in these categories.

Counts of FTE Students

The HEGIS fall-enrollment survey does not establish a standard definition for "full-time-equivalent student." To the extent that institutions use different formulas, their FTE enrollment data lack comparability. And since FTE enrollment is used as a denominator for many indexes in this study, lack of comparability is a serious problem. However, it is believed that most institutions use *similar* bases for determining FTE enrollment, thereby likely reducing the seriousness of these inconsistencies.

Further problems are caused because not all institutions count enrollments on the same calendar date. Also the enrollment count is for the fall term and not the entire year. In contrast, finance data covers the entire fiscal year. Institutions with low attrition or large numbers of summer students will therefore show per-student revenues and expenditures that are overstated relative to institutions in the opposite situation. Finally, the financial data reflect noncredit instructional and other expenditures; however noncredit enrollments are not reported.

Debt Service

In some states, the capital costs of physical facilities are financed through a separate state agency; in other states, debt service is paid with current funds. For those that pay with current funds, their expenditures will be overstated in comparison to other states. Over half of the states had debt service funds appearing as state appropriations, and 11 states had such funds included in tuition and fees.

Tuition Remissions

In some states, tuition and fees are remitted to the state as an offset to state appropriations. Although the HEGIS finance survey directions clearly specify that these funds should be reported under tuition and fees and *not* under state appropriations, there is uncertainty as to whether these directions have been strictly followed. Appropriations may be overstated in some states if remitted tuition and fees are not excluded.

Tuition and fee remissions and exemptions for students should be reported under tuition and fees revenues. If not, the amounts will be understated.

Twelve states reported tuition and fees being reappropriated by the legislature. A spot check in selected states indicated that institutions were properly following instructions for reporting tuition.

Variances in Public Service

Institutions vary in the types of public-service activities they engage in. In many states, a variety of other state agencies may be providing these services (instruction in public hygiene, indigent patient care, hygiene research). To the extent that a typical state appropriations for these activities are reported, general institutional support will be overstated.

Geographical Price Adjustments

No attempt has been made in this study to adjust dollar values for differences among states in the prices paid for equivalent goods and services for higher education. Geographical price differences do exist and they are substantial, ranging from perhaps as high as 30 to 40 percent above the national average in Alaska to 15 to 20 percent below the average in certain nonmetropolitan areas of the country. In establishing a basis for interstate comparisons of purchasing power, such price differences should be taken into account. However, these data are not currently available.

Imputed Data

In these instances where institutions fail to report data, NCES imputes these numbers. The attached listing indicates by state, those institutions where one or more values in the finance data base were imputed.
